JN0-363 Testking Learning Materials - JN0-363 Valid Exam Notes

P.S. Free 2025 Juniper JN0-363 dumps are available on Google Drive shared by Getcertkey: https://drive.google.com/open?id=1MU6bcyf4M5N5rGGPRLwmJL2BbJve1HOI

The clients can use the shortest time to prepare the JN0-363 exam and the learning only costs 20-30 hours. The questions and answers of our JN0-363 exam questions are refined and have simplified the most important information so as to let the clients use little time to learn. The client only need to spare 1-2 hours to learn our JN0-363 study question each day or learn them in the weekends. Commonly speaking, people like the in-service staff or the students are busy and don't have enough time to prepare the exam. Learning our JN0-363 test practice materials can help them save the time and focus their attentions on their major things.

In order to provide the best JN0-363 test training guide for all people, our company already established the integrate quality manage system, before sell serve and promise after sale. If you buy the JN0-363 preparation materials from our company, we can make sure that you will have the right to enjoy the 24 hours full-time online service on our JN0-363 Exam Questions. In order to help the customers solve the problem at any moment, our server staff will be online all the time give you the suggestions on JN0-363 study guide.

JN0-363 Valid Exam Notes | JN0-363 Reliable Exam Braindumps

We can claim that the qulity of our JN0-363 exam questions is the best and we are famous as a brand in the market for some advantages. Firstly, the content of our JN0-363 study materials is approved by the most distinguished professionals who are

devoting themselves in the field for years. Secondly, our JN0-363 preparation braindumps are revised and updated by our experts on regular basis. With these brilliant features our JN0-363 learning engine is rated as the most worthwhile, informative and high-effective.

Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP) Sample Questions (Q80-Q85):

NEW QUESTION # 80
You have a stub OSPF area running in your network. Your supervisor has asked you to build a virtual link across this area to connect new equipment acquired in a recent ISP acquisition. Which statement is correct about this scenario?

- A. Type 5 LSAs would be seen only in the newly attached area.
- B. Type 5 LSAs would be blocked in a stub area.
- C. Type 5 LSAs would be converted to type 7 LSAs.
- D. Type 5 LSAs would carry external information across your transit area to the backbone.

Answer: B

NEW QUESTION # 81
You have recently configured MSTP on two switches in your network to participate in the same MSTP region. You issue the show spanning-tree mstp configuration command on both switches and notice that the configuration digests do not match.
What does this mismatch indicate?

- A. Everything is functioning as expected because the configuration digests should not match.
- B. You should ensure that the bridge IDs and priority values are unique on both switches.
- C. You should ensure that the MSTIs and their VLAN IDs are equal on both switches.
- D. You should ensure that the max-age and hello timers are equal on both switches.

Answer: C

NEW QUESTION # 82
Exhibit

Referring to the exhibit, which two additional steps should you take to fully configure NSR? (Choose two.)

- A. You must configure GRES.
- B. You must configure graceful restart.
- C. You should configure commit synchronization.
- D. You should configure the max period for NSR precision timers.

Answer: A,C

Explanation:
https://www.juniper.net/documentation/us/en/software/junos/high-availability/topics/task/nsr-configuring.html Nonstop routing (NSR) requires both Graceful Routing Engine Switchover (GRES) and commit synchronization to be configured to maintain routing protocol and forwarding state during a Routing Engine switchover. NSR allows the secondary Routing Engine to take over the control plane without the protocols needing to restart, and GRES ensures that the forwarding plane continues operating with the current forwarding table. Commit synchronization ensures that configuration changes are synchronized between the primary and backup Routing Engines.

NEW QUESTION # 83
You are asked to configure filter-based forwarding on a Junos device.
Which two statements are correct in this scenario? (Choose two.)

- A. You must create a route target.
- B. You must create and apply a match filter.
- C. You must create a routing instance.
- D. You must create a routing policy.

Answer: B,C

Explanation:
To configure filter-based forwarding, perform the following tasks:
- Create a match filter on the ingress device. To specify a match filter, include the filter filter-name statement at the [edit firewall]
hierarchy level. A packet that passes through the filter is compared against a set of rules to classify it and to determine its
membership in a set. Once classified, the packet is forwarded to a routing table specified in the accept action in the filter description
language. The routing table then forwards the packet to the next hop that corresponds to the destination address entry in the table.
- Create routing instances that specify the routing table(s) to which a packet is forwarded, and the destination to which the packet is
forwarded at the [edit routing- instances] hierarchy level.

NEW QUESTION # 84
Which two IS-IS packet types are used to maintain IS-IS database synchronization? (Choose two.)

- A. IIH
- B. CSNP
- C. LSP
- D. PSNP

Answer: B,D

NEW QUESTION # 85
......

prove them superior and quite pertinent to your needs and requirements.
