Pdf XSOAR-Engineer Braindumps, Latest XSOAR-Engineer Material

DumpsValid Palo Alto Networks XSOAR-Engineer exam training materials praised by the majority of candidates is not a recent thing. This shows DumpsValid Palo Alto Networks XSOAR-Engineer exam training materials can indeed help the candidates to pass the exam. Compared to other questions providers, DumpsValid Palo Alto Networks XSOAR-Engineer exam training materials have been far ahead. uestions broad consumer recognition and reputation, it has gained a public praise. If you want to participate in the Palo Alto Networks XSOAR-Engineer Exam, quickly into DumpsValid website, I believe you will get what you want. If you miss you will regret, if you want to become a professional IT expert, then quickly add it to cart.

Palo Alto Networks XSOAR Engineer Sample Questions (Q86-Q91):

NEW QUESTION # 86

An engineer asked for a specific command in an integration but the capability does not exist. The engineer decided to edit the existing integration by copying the integration and adding the needed commands.

What is the main concern when adding these commands?

- A. The custom integration will not be maintained and updated by XSOAR content team
- B. The code may not be written to XSOAR standards
- C. The commands must return a proper result to the war room for the analysts to understand
- D. The integrations are locked and cannot be edited with additional commands

Answer: A

NEW QUESTION # 87

Where is a custom layout for an incident configured?.

- A. Incident type.
- B. Pre-process rule.
- C. Integration instance settings.
- D. Incident playbook.

Answer: A

Explanation:

The Admin Guide states that layouts-representing how analysts view incident data, evidence, fields, and work plans-are attached directly to incident types. When configuring an incident type, the administrator can specify the layout for the "New," "Editing" and

"Preview" modes. This ensures consistent presentation of data across the SOC, tailored to each use case (e.g., phishing, endpoint alerts, malware investigations).

Pre-process rules (option A) operate before incident creation and do not control the user interface layout.

Incident playbooks (option B) automate response actions but have no effect on how the incident UI is presented. Integration instance settings (option C) define connection details and ingestion parameters but do not control UI layouts.

Only the Incident Type configuration page includes fields for selecting or assigning custom layouts. This aligns with XSOAR's design principle: incident types define schema, workflows, and UI behavior, including which layout is displayed to analysts.

Thus, the correct answer is D, as incident layouts are configured and bound within the Incident Type settings.

NEW QUESTION # 88

When re-assigning an existing incident to a new incident type, an engineer is concerned about the preservation of critical data currently stored in fields that are only associated to the original incident type.

Upon making the change, in which state will the critical data be in the now unassociated fields?.

- A. Hidden from Context Data and no longer accessible.
- B. Hidden from the Context Data but accessible.
- C. Visible within Context Data and fully accessible.
- D. Visible with Context Data, grayed out, and fully accessible.

Answer: C

Explanation:

XSOAR separates Context Data from Incident Layout fields. When an incident field is populated, its value is stored in Context, even if the incident type later changes. The Admin Guide clearly states that context is persistent and not dependent on whether a field belongs to the new incident type.

If an incident is reassigned to a different incident type, fields not included in the new type's layout are no longer visible in the UI, but the data is fully retained in Context. Analysts can still retrieve the values through playbooks, scripts, or JSON view. This ensures investigations are not disrupted and historical information is never lost due to schema changes.

The data is not deleted, nor is it hidden from context (ruling out options A and D). It also does not appear grayed out in the UI (C), because the fields no longer appear at all unless re-added to the layout.

Thus, per XSOAR's data retention model, the correct state is B: Visible within Context Data and fully accessible.

NEW QUESTION # 89

Which two functions in XSOAR are incident types used for? (Choose two.)

- A. To run dedicated playbooks for different event types
- B. To classify events ingested from various sources into the relevant types
- C. To facilitate role based access to XSOAR incidents
- D. To classify indicators extracted in XSOAR incidents to their respective types

Answer: B,D

NEW QUESTION # 90

In which two options can an automation script be executed? (Choose two.)

- A. Playbook
- B. Engine
- C. War room
- D. Integration

Answer: A,C

Explanation:
