問題 #91

Which two statements are correct on a FortiGate using the FortiGuard Outbreak Protection Service (VOS)? (Choose two.)

- A. The antivirus database queries FortiGuard with the hash of a scanned file
- B. If third-party AV database returns a match the scanned file is deemed to be malicious.
- C. The hash signatures are obtained from the FortiGuard Global Threat Intelligence database.
- D. The FortiGuard VOS can be used only with proxy-base policy inspections.
- E. The AV engine scan must be enabled to use the FortiGuard VOS feature

答案：A,C

解題說明：

c) The antivirus database queries FortiGuard with the hash of a scanned file. This is how the FortiGuard VOS service works. The FortiGate queries FortiGuard with the hash of a scanned file, and FortiGuard returns a list of known malware signatures that match

the hash.
