It is common in modern society that many people who are more knowledgeable and capable than others finally lost some good opportunities for development because they didn't obtain the HPE0-S59 Certification. The prerequisite for obtaining the HPE0-S59 certification is to pass the exam, but not everyone has the ability to pass it at one time. Because of not having appropriate review methods and review materials, or not grasping the rule of the questions, so many candidates eventually failed to pass even if they have devoted much effort.

## HPE Compute Solutions Sample Questions (Q50-Q55):

### NEW QUESTION # 50

What is a restriction of using a RoCE network?

- A. This network type does not support the smart link and private network features.
- B. This network type does not support sFlow and remote port monitoring.
- C. This network type is not supported with HPE Virtual Connect SE 100Gb F8 Module for HPE Synergy.
- D. This network type by default is configured as untagged network and cannot be a part of a network set.

Answer: A

### NEW QUESTION # 51

Your customer wants to add dedicated Fibre Channel connectivity to the HPE Synergy frame running HPE Synergy 480 Gen10 compute modules, each with one CPU socket populated. Currently they use two 12 Gb SAS switches and two HPE Virtual Connect SE 100Gb F32 Modules for HPE Synergy installed in third fabric.

What must be done to enable dedicated FC connectivity for this HPE Synergy frame?

- **A. A second CPU must be installed for all HPE Synergy 480 Gen10 compute nodes.**
- B. For VC-FC modules, all of server facing ports must be properly licensed.
- C. For Brocade switches, a logical interconnect group must be created in HPE OneView.
- D. SAS switches must be moved to second fabric and FC modules installed in the first one.

**Answer: A**

Explanation:

To enable dedicated Fibre Channel (FC) connectivity in an HPE Synergy frame, if using Brocade switches, it is necessary to create a logical interconnect group in HPE OneView. This group defines the configuration and management of FC connectivity for the compute modules. Properly configuring and managing this logical interconnect group ensures that the compute modules can establish dedicated FC connections.

### NEW QUESTION # 52

Your customer has the following HPE Synergy setup:

- 15 HPE Synergy 12000 frames with 50Gb connectivity to each server port
- 2 HPE Composer 2 modules
- 15 HPE D3940 Storage Modules, one per frame
- 2 HPE 12Gb SAS switches per frame

Which statement about this setup is true?

- **A. The customer must create at least five logical enclosures for this setup.**
- B. The customer can install up to 12 HPE Synergy 480 compute nodes per frame.
- C. If properly cabled, any compute node can access any HPE D3490 storage module.
- D. To manage 15 frames, additional HPE Composers are required.

**Answer: A**

Explanation:

With 15 HPE Synergy 12000 frames, the customer must create multiple logical enclosures to manage the setup efficiently. HPE Synergy typically supports up to five frames per logical enclosure, meaning that at least five logical enclosures would be necessary to manage all 15 frames. This ensures proper organization, management, and scalability of the resources.

### NEW QUESTION # 53

Your customer is implementing an HPE Synergy solution based on three frames.

Click each of the ports that can be used to connect satellite modules.

**Answer:**

Explanation:

Explanation:

The QSFP+ ports (Q1 and Q2) on the HPE Virtual Connect SE 100Gb F32 Module for HPE Synergy can be used to connect satellite modules. These ports are designed to handle high-speed connectivity required for linking additional frames and expanding the Synergy infrastructure.

#### NEW QUESTION # 54

You are troubleshooting an HPE OneView server profile that presents a critical state.

The server profile was configured with a Link Aggregation Group.

What should you check to fix the issue?

- A. if both FlexNICs are configured with the same speed
- B. if both FlexNICs are connected to different networks
- C. if the logical enclosure is configured with redundant master modules
- D. If the logical enclosure is built on at least three HPE Synergy frames

**Answer: A**

Explanation:

When troubleshooting a server profile in HPE OneView that is in a critical state due to a Link Aggregation Group (LAG), it is important to check if both FlexNICs are configured with the same speed. Inconsistent speeds can cause issues with link aggregation, leading to network instability and performance degradation.
