New Cybersecurity-Practitioner Exam Training Free PDF | High-quality Cybersecurity-Practitioner Latest Test Practice: Palo Alto Networks Cybersecurity Practitioner

With the company of our Cybersecurity-Practitioner study dumps, you will find the direction of success. There is nothing more exciting than an effective and useful Cybersecurity-Practitioner question bank to study with for your coming exam. The sooner you use Cybersecurity-Practitioner Training Materials, the more chance you will pass the Cybersecurity-Practitioner exam, and the earlier you get your certificate. You definitely have to have a try and you will be satisfied without doubt.

Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q223-Q228):

NEW QUESTION # 223
Which endpoint protection security option can prevent malware from executing software?

- A. DNS Security

- B. Dynamic access control
- C. URL filtering
- D. Application allow list

Answer: D

Explanation:
An application allow list prevents malware from executing by only permitting approved applications to run on an endpoint. Any unauthorized or unknown software, including malicious programs, is automatically blocked from executing.

NEW QUESTION # 224
In which step of the cyber-attack lifecycle do hackers embed intruder code within seemingly innocuous files?

- A. exploitation
- B. delivery
- C. weaponization
- D. reconnaissance

Answer: C

Explanation:
"Weaponization: Next, attackers determine which methods to use to compromise a target endpoint. They may choose to embed intruder code within seemingly innocuous files such as a PDF or Microsoft Word document or email message."

NEW QUESTION # 225
Which element of the security operations process is concerned with using external functions to help achieve goals?

- A. people
- B. technology
- C. interfaces
- D. business

Answer: C

Explanation:
The six pillars include:
1. Business (goals and outcomes)
2. People (who will perform the work)
3. Interfaces (external functions to help achieve goals)
4. Visibility (information needed to accomplish goals)
5. Technology (capabilities needed to provide visibility and enable people)
6. Processes (tactical steps required to execute on goals)

NEW QUESTION # 226
Which statement describes advanced malware?

- A. It can operate without consuming resources.
- B. It operates openly and can be detected by traditional antivirus.
- C. It is designed to avoid detection and adapt.
- D. It lacks the ability to exfiltrate data or persist within a system.

Answer: C

Explanation:
Advanced malware employs sophisticated techniques such as polymorphism, encryption, and stealth to evade detection by traditional signature-based tools. It adapts to different environments, modifies its code to avoid static analysis, and maintains persistence through obfuscation and anti-forensic measures. Palo Alto Networks' threat prevention technologies use machine learning, behavior analysis, and sandboxing to detect these evasive malware strains. Such adaptive capabilities distinguish advanced

malware from simpler threats that are easily identified and removed, underscoring the need for modern, layered security controls capable of dynamic threat detection.

NEW QUESTION # 227

What differentiates knowledge-based systems from behavior-based systems?

- A. Behavior-based systems find the data that knowledge-based systems store.
- B. Behavior-based systems pull from a previously stored database that distinguishes "bad".
- C. Knowledge-based systems pull from a previously stored database that distinguishes "bad". C. Knowledge-based systems try to find new, distinct traits to find "bad" things.

Answer: C

Explanation:
Knowledge-based systems and behavior-based systems are two types of artificial intelligence systems that can be used for security purposes. Knowledge-based systems use a predefined database of rules, facts, and patterns that distinguish "bad" or malicious activities from normal ones. They compare the incoming data with the stored knowledge and flag any anomalies or matches. Behavior-based systems, on the other hand, learn from the observed data and establish a baseline of normal behavior. They then monitor the data for any deviations or changes from the baseline and alert on any suspicious or abnormal activities. Reference:
