

Braindumps Professional-Cloud-Security-Engineer Downloads | Pdf Professional-Cloud-Security-Engineer Torrent

BONUS!!! Download part of FreePdfDump Professional-Cloud-Security-Engineer dumps for free: <https://drive.google.com/open?id=1S-B7NXdXQha8s-Hm5sFNS3jK6wEVbhTO>

Our Professional-Cloud-Security-Engineer practice questions enjoy great popularity in this line. We provide our Professional-Cloud-Security-Engineer exam braindumps on the superior quality and being confident that they will help you expand your horizon of knowledge of the exam. They are time-tested Professional-Cloud-Security-Engineer Learning Materials, so they are classic. As well as our after-sales services. And we can always give you the most professional services on our Professional-Cloud-Security-Engineer training guide.

The Google Professional-Cloud-Security-Engineer exam covers a range of topics, including designing and implementing security controls for cloud infrastructure, configuring and managing network security, implementing data protection measures, and managing incident response and disaster recovery. Candidates must demonstrate their ability to assess security risks and compliance requirements, and design and implement security solutions that meet these requirements. Professional-Cloud-Security-Engineer Exam consists of multiple-choice and scenario-based questions, and candidates have two hours to complete it. Passing the exam requires a score of 75% or higher.

Pdf Professional-Cloud-Security-Engineer Torrent | New Professional-Cloud-Security-Engineer Exam Price

Our Professional-Cloud-Security-Engineer study dumps are suitable for you whichever level you are in right now. Whether you are in entry-level position or experienced exam candidates who have tried the exam before, this is the perfect chance to give a shot. High quality and high accuracy Professional-Cloud-Security-Engineer real materials like ours can give you confidence and reliable backup to get the certificate smoothly because our experts have extracted the most frequent-tested points for your reference, because they are proficient in this exam who are dedicated in this area over ten years. If you make up your mind of our Professional-Cloud-Security-Engineer Exam Questions after browsing the free demos, we will staunchly support your review and give you a comfortable and efficient purchase experience this time.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q171-Q176):

NEW QUESTION # 171

A large e-retailer is moving to Google Cloud Platform with its ecommerce website. The company wants to ensure payment information is encrypted between the customer's browser and GCP when the customers checkout online.

What should they do?

- A. Configure the firewall to allow outbound traffic on port 443, and block all other outbound traffic.
- B. Configure the firewall to allow inbound traffic on port 443, and block all other inbound traffic.
- **C. Configure an SSL Certificate on an L7 Load Balancer and require encryption.**
- D. Configure an SSL Certificate on a Network TCP Load Balancer and require encryption.

Answer: C

Explanation:

To ensure that payment information is encrypted between the customer's browser and Google Cloud Platform during checkout, the company should configure an SSL certificate on an L7 (Layer 7) Load Balancer. Here's why this is the best solution:

SSL/TLS Termination: An L7 Load Balancer can handle SSL/TLS termination, which means it can decrypt HTTPS traffic, offloading the work from the backend servers. This is essential for handling encrypted connections securely.

HTTPS Configuration: By configuring an SSL certificate, the load balancer ensures that all traffic between the customer's browser and the application is encrypted using HTTPS.

Security Best Practices: Using an L7 Load Balancer with an SSL certificate aligns with best practices for securing web applications, particularly for e-commerce sites handling sensitive payment information.

Managed Certificates: Google Cloud offers managed SSL certificates, which simplifies the process of obtaining, deploying, and renewing SSL certificates.

Implementation Steps:

Obtain an SSL certificate.

Configure the L7 Load Balancer in the GCP Console.

Associate the SSL certificate with the load balancer.

Ensure that the backend services are configured to handle HTTPS traffic.

Setting up HTTPS Load Balancing

NEW QUESTION # 172

You are on your company's development team. You noticed that your web application hosted in staging on GKE dynamically includes user data in web pages without first properly validating the inputted data. This could allow an attacker to execute gibberish commands and display arbitrary content in a victim user's browser in a production environment.

How should you prevent and fix this vulnerability?

- A. Set up an HTTPS load balancer, and then use Cloud Armor for the production environment to prevent the potential XSS attack.
- B. Use Web Security Scanner to validate the usage of an outdated library in the code, and then use a secured version of the included library.
- C. Use Cloud IAP based on IP address or end-user device attributes to prevent and fix the vulnerability.
- **D. Use Web Security Scanner in staging to simulate an XSS injection attack, and then use a templating system that supports contextual auto-escaping.**

Answer: D

Explanation:

NEW QUESTION # 173

An organization is evaluating the use of Google Cloud Platform (GCP) for certain IT workloads. A well-established directory service is used to manage user identities and lifecycle management. This directory service must continue for the organization to use as the "source of truth" directory for identities.

Which solution meets the organization's requirements?

- A. Cloud Identity
- **B. Google Cloud Directory Sync (GCDS)**
- C. Pub/Sub
- D. Security Assertion Markup Language (SAML)

Answer: B

Explanation:

Explanation

With Google Cloud Directory Sync (GCDS), you can synchronize the data in your Google Account with your Microsoft Active Directory or LDAP server. GCDS doesn't migrate any content (such as email messages, calendar events, or files) to your Google Account. You use GCDS to synchronize your Google users, groups, and shared contacts to match the information in your LDAP server.

NEW QUESTION # 174

You manage one of your organization's Google Cloud projects (Project A). A VPC Service Control (SC) perimeter is blocking API access requests to this project, including Pub/Sub. A resource running under a service account in another project (Project B) needs to collect messages from a Pub/Sub topic in your project. Project B is not included in a VPC SC perimeter.

You need to provide access from Project B to the Pub/Sub topic in Project A using the principle of least privilege.

What should you do?

- A. Create an access level that allows a developer in Project B to subscribe to the Pub/Sub topic that is located in Project A.
- B. Remove the Pub/Sub API from the list of restricted services in the perimeter configuration for Project A.
- **C. Configure an ingress policy for the perimeter in Project A, and allow access for the service account in Project B to collect messages.**
- D. Create a perimeter bridge between Project A and Project B to allow the required communication between both projects.

Answer: C

Explanation:

NEW QUESTION # 175

Your organization recently deployed a new application on Google Kubernetes Engine. You need to deploy a solution to protect the application. The solution has the following requirements:

- Scans must run at least once per week
- Must be able to detect cross-site scripting vulnerabilities
- Must be able to authenticate using Google accounts

Which solution should you use?

- A. Security Health Analytics
- **B. Web Security Scanner**
- C. Google Cloud Armor
- D. Container Threat Detection

Answer: B

Explanation:

Web Security Scanner identifies security vulnerabilities in your App Engine, Google Kubernetes Engine (GKE), and Compute Engine web applications.
