Practice Exam Questions for: Nokia Data Center Fabric Fundamentals (exam number: 4A0-D01)

The following questions will test your knowledge and prepare you for the Nokia Data Center Fabric Fundamentals exam. Compare your responses with the Answer Key at the end of the document.

1. A static route is configured in two steps in Nokia SR Linux. Which of the following items CANNOT be configured in the static-routes container?
 - a. A blackhole option
 - b. An IPv4 destination prefix
 - c. A preference value
 - d. A next-hop-group
2. Which of the following about the leaf-spine topology (Clos network) is FALSE?
 - a. Every leaf router is connected to all spine routers.
 - b. Scaling can be achieved by adding an additional spine layer.
 - c. Layer 2 is typically used at the aggregation and access layers.
 - d. The leaf-spine topology uses ECMP to distribute traffic across duplicate links.
3. Which of the following is one of the recommendations for AS number assignment in a leaf-spine network?
 - a. Assign the same AS number to all spine routers in a cluster
 - b. Assign public AS numbers to all leaf and spine routers
 - c. Assign a distinct AS number to all super spine routers
 - d. Assign the same AS number to all leaf routers
4. Which of the following is NOT a characteristic of Nokia's SR Linux?
 - a. YANG model defines the configuration and state information for each application.
 - b. Each individual Linux application uses a distinct IP-VRF.
 - c. Applications can be accessed through JSO1 RPCs.
 - d. Third-party defined applications can access the SR Linux applications.

Many students often start to study as the exam is approaching. Time is very valuable to these students, and for them, one extra hour of study may mean 3 points more on the test score. If you are one of these students, then Nokia Data Center Fabric Fundamentals Exam exam tests are your best choice. Because students often purchase materials from the Internet, there is a problem that they need transport time, especially for those students who live in remote areas. When the materials arrive, they may just have a little time to read them before the exam. However, with 4A0-D01 Exam Questions, you will never encounter such problems, because our materials are distributed to customers through emails. After you have successfully paid, you can immediately receive 4A0-D01 test guide from our customer service staff, and then you can start learning immediately.

Many candidates find the Nokia 4A0-D01 exam preparation difficult. They often buy expensive study courses to start their Nokia 4A0-D01 certification exam preparation. However, spending a huge amount on such resources is difficult for many Nokia Data Center Fabric Fundamentals Exam exam applicants. The latest Nokia 4A0-D01 Exam Dumps are the right option for you to prepare for the Nokia 4A0-D01 certification test at home.

New 4A0-D01 Exam Objectives, 4A0-D01 Study Materials

TorrentValid's Nokia 4A0-D01 questions are available in PDF format. Our Nokia Data Center Fabric Fundamentals Exam (4A0-

D01) PDF is embedded with questions relevant to the actual exam content only. Nokia 4A0-D01 PDF is printable and portable, so you can learn with ease and share it on multiple devices. You can use this Nokia 4A0-D01 PDF on your mobile and tablet anywhere, anytime, without the internet and installation process. Our qualified team of Nokia Data Center Fabric Fundamentals Exam Professionals update Nokia Data Center Fabric Fundamentals Exam (4A0-D01) study material to improve the quality and to match the changes in the syllabus and pattern shared by Nokia.

Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which of the following statements about multi-homing in EVPN is FALSE?

- A. The Ethernet Segment (ES) identifies a set of links that connects a host to one or more leafs.
- **B. The ES identifier (ESI) uniquely identifies an ES and it is locally significant for a particular leaf.**
- C. Type 1 Ethernet Auto-Discovery (A-D) EVPN route is used to support EVPN multi-homing.
- D. Type 4 Ethernet Segment (ES) EVPN route is used for designated forwarder (DF) election for an ES.

Answer: B

Explanation:

The Ethernet Segment Identifier (ESI) uniquely identifies an Ethernet Segment (ES) globally across the EVPN domain, not just locally for a particular leaf.

NEW QUESTION # 37

Based on the exhibit output, which of the following is NOT the reason the user runs the "baseline diff" command?

```
user admin

A:dc-leaf-1# enter candidate private
--{ + candidate private private-admin }--[ ]--
A:dc-leaf-1# interface lo1 subinterface 0 ipv4 address 200.1.1.1/32
--{ +* candidate private private-admin }--[ interface lo1 subinterface 0 ipv4 address
200.1.1.1/32 ]--
A:dc-leaf-1#
--{ +! candidate private private-admin }--[ ]--
A:dc-leaf-1# baseline diff
      interface ethernet-1/1 {
-      admin-state disable
      }
```

- A. Another user has committed changes.
- **B. User admin is not able to commit their changes.**
- C. User admin wants to check if there are differences between the current running config and their baseline datastore.
- D. User admin notices that "!" appears in the CLI prompt.

Answer: B

Explanation:

The "baseline diff" command is used to compare the candidate configuration against the baseline datastore to see changes or conflicts, especially when multiple users are involved or to verify differences. It does not indicate that the user is unable to commit changes.

NEW QUESTION # 38

How are LLDP frames advertised between two Nokia SR Linux routers?

- A. They are routed to the destination node based on the IP VRF forwarding table.
- **B. They are forwarded to the destination node based on the MAC VRF table.**

- C. They are periodically flooded to the broadcast MAC address on each interface.
- D. They are forwarded to the destination node based on the MAC VRF table.

Answer: B

Explanation:

LLDP frames are periodically sent to a well-known multicast MAC address on each interface to discover directly connected devices.

NEW QUESTION # 39

Which of the following statements about configuration checkpoints in Nokia SR Linux is FALSE?

- A. The current running configuration can be saved as a JSON-formatted checkpoint file.
- B. The operator can generate a new checkpoint when committing configuration changes.
- **C. Checkpoint 0 is always the oldest checkpoint.**
- D. The operator can revert to any existing checkpoint.

Answer: C

Explanation:

In Nokia SR Linux, checkpoint numbering is dynamic. The system assigns the lowest available number to the most recent checkpoint, not necessarily "0." When the number of saved checkpoints exceeds the configured maximum, the oldest checkpoint is removed, and the remaining checkpoints are renumbered accordingly. Therefore, checkpoint "0" is not always the oldest checkpoint.

NEW QUESTION # 40

Which of the following statements about using BFD with BGP is FALSE?

- **A. Using BFD can speed up the BGP advertisement interval.**
- B. It can help rapidly detect link failures.
- C. BGP is notified if several BFD control packets are missed.
- D. The BFD endpoints agree on the send/receive rate of control packets.

Answer: A

Explanation:

BFD helps detect link failures rapidly and notifies BGP to trigger route updates quickly, but it does not speed up the BGP advertisement interval itself. BGP advertisement intervals are controlled by BGP timers, not by BFD.

NEW QUESTION # 41

.....

The TorrentValid is a leading platform that is committed to offering to make Nokia Exam Questions preparation simple, smart, and successful. To achieve this objective TorrentValid has got the services of experienced and qualified Nokia 4A0-D01 Exam trainers. They work together and put all their efforts and ensure the top standard of TorrentValid Nokia 4A0-D01 exam dumps all the time.
