Microsoft - AI-102 - Designing and Implementing a Microsoft Azure AI Solution Latest Composite Test Price

The industry and technology is constantly changing, and PDFTorrent always keep its exam dumps current and updated to the latest standards. If you want to get the best valid Microsoft training material, congratulations, you find the right place. Our AI-102 practice torrent is updated and valid, providing the information which just meets your needs. You can have a general understanding of the AI-102 Actual Test and know how to solve the problem. Besides, AI-102 test engine is customizable and advanced which creates a real exam simulation environment to prepare for your success.

Microsoft Designing and Implementing a Microsoft Azure AI Solution Sample Questions (Q306-Q311):

NEW QUESTION # 306

You are developing a photo application that will find photos of a person based on a sample image by using the Face API. You need to create a POST request to find the photos.

How should you complete the request? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: findsimilar

<https://docs.microsoft.com/en-us/rest/api/faceapi/face/find-similar>

Box 2: matchPerson

Find similar has two working modes, "matchPerson" and "matchFace". "matchPerson" is the default mode that it tries to find faces of the same person as possible by using internal same-person thresholds. It is useful to find a known person's other photos. Note that an empty list will be returned if no faces pass the internal thresholds.

"matchFace" mode ignores same-person thresholds and returns ranked similar faces anyway, even the similarity is low. It can be used in the cases like searching celebrity-looking faces.

<https://docs.microsoft.com/en-us/rest/api/faceapi/face/findsimilar>

NEW QUESTION # 307

You are using a Language Understanding service to handle natural language input from the users of a web-based customer agent. The users report that the agent frequently responds with the following generic response: "Sorry, I don't understand that." You need to improve the ability of the agent to respond to requests.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. (Choose three.)

Answer:

Explanation:

NEW QUESTION # 308

You are building an app that uses a Language Understanding model to analyze text files. You need to ensure that the app can detect the following entities:

- * Temperatures
- * Currency values
- * Email addresses
- * Telephone numbers

The solution must minimize development effort.

Which model capability should you use?

- A. regular expression components
- B. utterances
- **C. pre-built entity components**
- D. list entities
- E. learned entities

Answer: C

NEW QUESTION # 309

You have the following C# function.

You call the function by using the following code.

Following 'key phrases' what output will you receive?

- A. Jumps over the
- B. The quick brown fox jumps over the lazy dog
- **C. Quick brown fox lazy dog**
- D. The quick

Answer: C

Explanation:

The provided code uses the Azure AI Language - Text Analytics client to call the ExtractKeyPhrases method.

The method ExtractKeyPhrases(text) identifies the most important words and phrases in the input text.

The input string is:

"the quick brown fox jumps over the lazy dog"

The ExtractKeyPhrases API removes stopwords such as "the," "over," and "jumps" and extracts only meaningful keywords. Therefore, the returned list of key phrases will include:

"Quick brown fox"

"Lazy dog"

When printed, the console output after "Key phrases:" will show:

Quick brown fox

Lazy dog

This matches option C (Quick brown fox lazy dog), since the key phrases are concatenated as output lines.

The answer: C. Quick brown fox lazy dog
