Exam Mule-Dev-202 Pattern, Practical Mule-Dev-202 Information

VCETorrent makes your Mule-Dev-202 exam preparation easy with its various quality features. Our Mule-Dev-202 exam braindumps come with 100% passing and refund guarantee. VCETorrent is dedicated to your accomplishment, hence assures you successful in Mule-Dev-202 Certification exam on the first try. If for any reason, a candidate fails in Mule-Dev-202 exam then he will be refunded his money after the refund process. Also, we offer one year free updates to our Mule-Dev-202 Exam esteemed user, these updates are applicable to your account right from the date of purchase. 24/7 customer support is favorable to candidates who can email us if they find any ambiguity in the Mule-Dev-202 exam dumps, our support will merely reply to your all Salesforce Certified MuleSoft Hyperautomation Developer exam product related queries.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q13-Q18):

NEW QUESTION # 13

Northern Trail Outfitters wants to create an automation which runs on a fixed schedule to enter sales data into NetSuite running as a process in the background. The business product owner chose MuleSoft Composer as the tool for this task. The Salesforce admin wants to advise the product owner about how the MuleSoft Composer scheduling functionality works. Which two options are available for use as the time mechanism within MuleSoft Composer? (Choose two.)

- A. Schedule based on a formula
- B. Every 5 minutes
- C. Every 30 minutes
- D. Every 30 days

Answer: B,C

Explanation:

MuleSoft Composer provides scheduling functionality that allows you to set up automated flows to run at specified intervals. The available options for scheduling within MuleSoft Composer include:

Every 30 minutes:

This option allows you to set up a flow to run every half hour, ensuring that your automation process is executed at regular intervals throughout the day.

Every 5 minutes:

This option enables the flow to run at a higher frequency, executing the automation process every 5 minutes, which is useful for scenarios that require more frequent updates or processing.

These scheduling options ensure that you can automate tasks at the desired frequency without manual intervention.

NEW QUESTION # 14

Northern Trail Outfitters wants to run a bidirectional sync of data between two Salesforce orgs. They want to perform real-time updates between both systems so that if either system is updated, the other one is automatically updated with the new data. What is the minimum number of MuleSoft Composer flows needed to meet this requirement?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

To achieve a bidirectional sync between two Salesforce orgs using MuleSoft Composer, you would need a minimum of two flows.
Flow 1: Sync from Org A to Org B: This flow monitors changes in Org A and updates Org B with the new data whenever a change occurs.

Flow 2: Sync from Org B to Org A: Similarly, this flow monitors changes in Org B and updates Org A with the new data whenever a change occurs.

This setup ensures that any change in either Salesforce org is reflected in the other, maintaining real-time synchronization between the two systems.

MuleSoft Composer for Salesforce

NEW QUESTION # 15

Northern Trail Outfitters (NTO) has a new business channel that requires exposing their existing non-MuleSoft APIs to the public. They do not have an Anypoint Flex Gateway.

The NTO digital channel team wants to leverage Anypoint Platform as its API management tool.

What is the most time-efficient mechanism of securing their backend systems?

- A. Expose each endpoint as a basic endpoint.
- B. Rewrite the existing APIs using MuleSoft.
- C. Use a basic endpoint with a configured consumer endpoint.
- **D. Create a proxy in front of each existing API.**

Answer: D

Explanation:

To expose existing non-MuleSoft APIs and secure them efficiently using Anypoint Platform, you can create API proxies. This approach provides several benefits:

API Proxy Creation:

Creating a proxy involves setting up an intermediary that forwards requests to the existing backend APIs. This allows you to leverage Anypoint Platform's API management capabilities without rewriting the existing APIs.

Proxies can be created quickly and configured to apply various security and governance policies.

Security and Management:

By creating a proxy, you can secure the APIs using Anypoint Platform's features such as rate limiting, authentication, and monitoring. This method is time-efficient and leverages the robust security features of the Anypoint Platform without significant redevelopment effort.

Anypoint Platform API Proxy Documentation

NEW QUESTION # 16

AnyAirlines has a MuleSoft Composer flow between NetSuite and Salesforce. One of the data elements coming from NetSuite is a string that needs to be put into a Boolean field in a Salesforce object.

Which Composer function should be used to change the datatype of the value?

- A. substitute()

- B. fromBooleanToString()
- **C. fromStringToBoolean()**
- D. today()

Answer: C

Explanation:

To convert a string from NetSuite into a Boolean field in a Salesforce object within MuleSoft Composer, you should use the `fromStringToBoolean()` function:

Function Purpose:

The `fromStringToBoolean()` function is specifically designed to convert string values to Boolean values. It interprets common Boolean strings like "true", "false", "yes", "no" and converts them into their corresponding Boolean values.

Usage:

Within MuleSoft Composer, use this function in a transformation step to ensure the data coming from NetSuite (as a string) is correctly transformed into a Boolean value before it is mapped to the Salesforce object.

Example:

If the string value from NetSuite is "true", `fromStringToBoolean("true")` will convert this to `true` in the Boolean field in Salesforce.

NEW QUESTION # 17

AnyAirlines uses an Einstein bot for their customer support. They want it to display a message when a user provides an incorrect answer to a particular question.

Which dialog option should be selected'?

- **A. Message**
- B. Rules
- C. Action
- D. Question

Answer: A

Explanation:

Message Dialog Option: When configuring an Einstein bot to respond to incorrect answers, the 'Message' dialog option should be selected. This allows the bot to display a predefined message to the user, guiding them appropriately or informing them of the incorrect input.

Reference: Salesforce Einstein Bot Setup Guide

Understanding Dialog Options:

Action: Used for initiating backend processes or external actions.

Question: Used for asking the user for information or inputs.

Rules: Used for defining conditional logic to control the flow of the conversation.

Message: Specifically used to provide information or feedback to the user, which is ideal for handling incorrect answers.
