Therefore, Free4Torrent will provide you with more and better certification training materials to satisfy your need.

## ServiceNow Certified Implementation Specialist - Strategic Portfolio Management Sample Questions (Q16-Q21):

### NEW QUESTION # 16

If a lens has four entities, which entity within the lens structure would not have a parent reference?

- A. Third-level entity
- B. Top-level entity
- C. Second-level entity
- D. Bottom entity

**Answer: B**

Explanation:

Explanation

According to the ServiceNow documentation1, a lens is a hierarchical structure that consists of entities and relationships. An entity is

a data object that represents a business concept, such as a project, a demand, or a resource. A relationship is a link between two entities that defines how they are connected. A lens can have up to four levels of entities, each with a parent reference to the entity above it, except for the top-level entity, which has no parent reference. The top-level entity is the root of the lens and defines its scope and type. For example, a project lens has a project as the top-level entity, and a demand lens has a demand as the top-level entity.

#### NEW QUESTION # 17

A user's availability is calculated as:

- A. Sum of allocated and confirmed hours, divided by the total capacity
- B. Capacity minus allocation
- C. Allocated time
- **D. Allocated hours divided by the total capacity**

**Answer: D**

Explanation:

According to the ServiceNow documentation<sup>1</sup>, a user's availability is calculated as the ratio of allocated hours to total capacity, expressed as a percentage. Allocated hours are the hours that a user is assigned to work on a project or demand. Total capacity is the maximum number of hours that a user can work in a given period, based on their schedule and availability profile. A user's availability indicates how much of their time is already allocated and how much is still available for new assignments.

#### NEW QUESTION # 18

The project property to update actual effort from time card is controlled at what level?

- A. Application Level (Global).
- B. Portfolio Level.
- **C. Project Level.**
- D. Program Level.

**Answer: C**

Explanation:

According to the ServiceNow documentation<sup>1</sup>, the project property to update actual effort from time card is controlled at the project level. This property is called Update actual effort from time card and it determines if the Actual effort field on the Dates tab should be updated based on the hours entered from time cards for the project. If set to Yes, the Actual effort field is read-only on the Project and Project Task forms. If set to No, the Actual effort field is editable on the Project and Project Task forms.

#### NEW QUESTION # 19

What is the default table that stores the idea categories that a user can select from when submitting an idea?

- A. im\_idea\_core
- **B. im\_category**
- C. dmn\_demand
- D. im\_module

**Answer: B**

Explanation:

Explanation

According to the Category Configuration document, the default table that stores the idea categories that a user can select from when submitting an idea is im\_category. This table contains the predefined categories for ideas, such as Business Process, Customer

Service, or IT Service. The other options are not correct, as they are not the tables that store the idea categories. The `dmn_demand` table stores the demand records that are created from the approved ideas. The `im_module` table stores the idea modules that are used to group ideas by different criteria. The `im_idea_core` table stores the core fields of the idea records.

### NEW QUESTION # 20

Idea [`im_idea_core`] is directly extended from which table?

- A. Task
- **B. It is not extended from any table**
- C. Idea Modules
- D. Project

**Answer: B**

Explanation:

According to the ServiceNow documentation<sup>1</sup>, the Idea [`im_idea_core`] table is a base table that is not extended from any other table. It stores information about ideas and their categories. The other options are incorrect because:

Task: The Task table is a base table that is extended by many other tables, such as Project, Demand, Incident, etc<sup>2</sup>.

Idea Modules: The Idea Modules table is a child table of the Idea [`im_idea_core`] table that defines the idea modules displayed on the Idea Portal<sup>3</sup>.

Project: The Project table is a child table of the Task table that stores information about projects.
