Pass Guaranteed MuleSoft-Integration-Associate - Salesforce Certified MuleSoft Integration Associate Exam Newest Valid Vce

when you buy our MuleSoft-Integration-Associate simulating exam, our website will use professional technology to encrypt the privacy of every user to prevent hackers from stealing. We believe that business can last only if we fully consider it for our customers, so we will never do anything that will damage our reputation. Hope you can give our MuleSoft-Integration-Associate Exam Questions full trust, we will not disappoint you. And with our MuleSoft-Integration-Associate study materials, you are bound to pass the exam.

Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

As part of a growth strategy a supplier signs a trading agreement with a large customer. The customer sends purchase orders to the supplier according to the ANSI X12 EDI standard and the supplier creates the orders in its ERP system using the information in the EDI document. The agreement also requires that the supplier provide a new RESTful API to process requests from the customer for current product inventory levels from the supplier's ERP system.

Which two fundamental integration use cases does the supplier need to deliver to provide an end-to-end solution for this business scenario? (Choose two.)

- A. User interface integration
- B. Synchronized data transfer

- C. Streaming data ingestion
- D. Sharing data with external partners
- E. Data mashups

Answer: B,D

Explanation:

To deliver an end-to-end solution for the described business scenario, the supplier needs to address both EDI processing and providing real-time data through a RESTful API. Here's a detailed explanation:

* Sharing Data with External Partners:

* EDI Integration: The supplier needs to process ANSI X12 EDI purchase orders from the customer and convert them into a format suitable for the ERP system.

* Partner Integration: Establishing secure and reliable data exchanges with the customer is crucial for seamless transactions.

* Synchronized Data Transfer:

* Real-Time API: Providing a RESTful API to allow the customer to query current product inventory levels from the supplier's ERP system.

* Data Consistency: Ensuring that the data provided through the API is accurate and up-to-date, reflecting the current state of the ERP system.

NEW QUESTION # 33

According to MuleSoft what is a major distinguishing characteristic of an application network in relation to the integration of systems, data, and devices?

- A. It uses a well-organized monolithic approach with standards
- B. It leverages well-accepted internet standards like HTTP and JSON
- C. It uses CI/CD automation for real-time project delivery
- D. It is built for change and self-service

Answer: D

Explanation:

An application network, as envisioned by MuleSoft, is designed to be dynamic and self-service, enabling rapid adaptation to changing business needs. Here's a detailed explanation:

* Built for Change:

* Flexibility: An application network allows for the easy addition, modification, and removal of services without disrupting existing functionalities.

* Modular Architecture: Promotes a modular approach where services and APIs can be independently developed, deployed, and managed.

* Self-Service:

* Empowerment: Enables different teams (e.g., developers, business units) to access and use APIs and services without heavy reliance on central IT.

* API-led Connectivity: Facilitates a self-service model where reusable APIs are available for various teams to integrate and build upon, accelerating innovation and reducing time-to-market.

* Characteristics:

* Decentralization: Unlike monolithic architectures, an application network supports decentralized development and deployment.

* Reusability and Discoverability: Services and APIs are designed to be easily discoverable and reusable across different parts of the organization.

NEW QUESTION # 34

Which component of AnypointPlatform belongs to the platform control plane?

- A. Runtime Fabric

- B. Runtime Replica
- **C. API Manager**
- D. Anypoint Connectors

Answer: C

Explanation:

In Anypoint Platform, the control plane is responsible for managing and controlling the various components and services that make up the platform. API Manager is part of the control plane, providing centralized management of APIs. Here's a detailed explanation:

- * Control Plane:
 - * Definition: The control plane in Anypoint Platform is responsible for the management, monitoring, and control of APIs, applications, and other platform resources.
 - * Components: Includes tools for API management, analytics, security, and governance.
 - * API Manager:
 - * Purpose: Allows users to manage API policies, monitor API usage, and secure APIs. It provides a centralized interface for managing the entire lifecycle of APIs.
 - * Features:
 - * Policy Enforcement: Apply security policies, rate limiting, and other governance rules.
 - * Analytics and Monitoring: Track API performance, usage statistics, and detect anomalies.
 - * Access Control: Manage user access and permissions for APIs.

References

- * MuleSoft Documentation: API Manager

NEW QUESTION # 35

In preparation for a digital transformation initiative an organization is reviewing related IT integration projects that failed for various reasons. According to MuleSoft's surveys of global IT leaders, what is a common cause of IT project failure that this organization may likely discover in its assessment?

- A. Spending too much time on enablement
- B. Reliance on an Integration-Platform-as-a-Service (iPaaS)
- **C. Lack of alignment around business outcomes**
- D. Following an Agile delivery methodology

Answer: C

Explanation:

One common cause of IT project failure identified by MuleSoft's surveys of global IT leaders is the lack of alignment around business outcomes. Here's a detailed explanation:

- * Lack of Alignment:
 - * Definition: This occurs when IT projects are not clearly linked to the organization's strategic goals and business objectives.
 - * Impact: Misalignment can lead to projects that do not deliver the intended business value, resulting in wasted resources and failed initiatives.
- * Common Causes:
 - * Poor Communication: Lack of effective communication between business stakeholders and IT teams can lead to misunderstandings and misaligned priorities.
 - * Undefined Objectives: Projects without clearly defined business outcomes and success metrics struggle to demonstrate value and justify investments.
- * Solution:
 - * Business-IT Collaboration: Foster strong collaboration between business and IT to ensure projects are aligned with strategic goals.
 - * Outcome-Focused Planning: Define clear business outcomes and success criteria at the outset of each project.

NEW QUESTION # 36

CloudHub is an example of which cloud computing service model?

- A. Software as a Service (SaaS)

- B. Infrastructure as a Service (IaaS)
- **C. Platform as a Service (PaaS)**
- D. Monitoring as a Service (MaaS)

Answer: C

Explanation:

CloudHub is MuleSoft's integration platform as a service (iPaaS) offering. It provides a platform for deploying and managing integration applications in the cloud. Here's a detailed explanation:

* Platform as a Service (PaaS):

* Definition: PaaS provides a cloud-based environment with everything required to support the complete lifecycle of building and deploying web applications and services without the complexity of managing the underlying hardware and software layers.

* CloudHub Features:

* Deployment: Simplifies the deployment of Mule applications to the cloud.

* Management: Provides tools for managing application performance, scaling, and monitoring.

* Connectivity: Offers out-of-the-box connectors and integration capabilities for various systems and services.

* Benefits:

* Scalability: Automatically scales applications based on demand.

* Availability: Ensures high availability and reliability with built-in disaster recovery and failover capabilities.

* Security: Provides robust security features to protect data and applications.
