2026 Plat-Dev-301 New Questions - Realistic New Salesforce Certified Platform Developer II - Multiple Choice Dumps Free Free PDF

The paper materials students buy on the market are often not able to reuse. After all the exercises have been done once, if you want to do it again you will need to buy it again. But with Plat-Dev-301 test question, you will not have this problem. All customers who purchased Plat-Dev-301 Study Tool can use the learning materials without restrictions, and there is no case of duplicate charges. For the PDF version of Plat-Dev-301 test question, you can print multiple times, practice multiple times, and repeatedly reinforce your unfamiliar knowledge.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q177-Q182):

NEW QUESTION # 177

A company has a custom component that allows users to search for records of a certain object type by invoking an Apex Controller that returns a list of results based on the user's input. When the search is completed, a searchComplete event is fired, with the results put in a results attribute of the event. The component is designed to be used within other components and may appear on a single page more than once.

What is the optimal code that should be added to fire the event when the search has completed?

A)

```
var evt = component.getEvent("searchComplete");  
evt.setParams({results: results});  
evt.fire();
```

B)

```
var evt = $A.get("e.c.searchComplete");  
evt.set("v.results", results);  
evt.fire();
```

C)

```
var evt = component.getEvent("searchComplete");  
evt.set("v.results", results);  
evt.fire();
```

D)

```
var evt = $A.get("e.c.searchComplete");  
evt.setParams({results: results});  
evt.fire();
```

- A. Option C
- **B. Option B**
- C. Option A
- D. Option D

Answer: B

Explanation:

The correct code to fire the event when the search has completed in a Lightning component is option B. `$A.get("e.c.searchComplete")` is the syntax used to get the event, `setParams` is used to set the parameters, and `fire` is used to dispatch the event.

NEW QUESTION # 178

A developer is writing code that requires making callouts to an external web service. Which scenario necessitates that the callout be made in an asynchronous method?

- A. The callout could take longer than 60 seconds to complete.
- B. The callouts will be made using the REST API.
- C. The callouts will be made in an Apex trigger.
- D. Over 10 callouts will be made in a single transaction.

Answer: C

Explanation:

Callouts cannot be made from a synchronous context such as an Apex trigger because they might exceed the maximum execution time, leading to timeouts. Asynchronous methods, such as `future` or `Queueable`, are required to handle callouts from triggers.

NEW QUESTION # 179

Universal Containers is using a custom Salesforce application to manage customer support cases. The support team needs to collaborate with external partners to resolve certain cases. However, they want to control the visibility and access to the cases shared with the external partners. Which Salesforce feature can help achieve this requirement?

- A. Sharing sets
- B. Apex managed sharing
- C. Criteria-based sharing rules
- D. Role hierarchy

Answer: B

Explanation:

Apex managed sharing is the correct feature to control the visibility and access to cases shared with external partners. It allows developers to programmatically create sharing records that grant access to users based on specific criteria, providing granular control over record sharing.

NEW QUESTION # 180

Universal Charities (UC) uses Salesforce to collect electronic donations in the form of credit card deductions from individuals and corporations.

When a customer service agent enters the credit card information, it must be sent to a 3rd-party payment processor for the donation to be processed. UC uses one payment processor for individuals and a different one for corporations.

What should a developer use to store the payment processor settings for the different payment processors, so that their system administrator can modify the settings once they are deployed, if needed?

- A. Custom metadata
- B. List custom setting
- C. Hierarchy custom setting
- D. Custom object

Answer: A

Explanation:

Custom metadata types are ideal for storing payment processor settings that need to be changed by an administrator post-deployment. They can be deployed with managed packages and are upgradeable. Unlike Custom Objects, Custom Metadata Types also support a deployment with active data and can have their records retrieved via SOQL in Apex.

NEW QUESTION # 181

Universal Containers wants to use a Customer Community with Customer Community Plus licenses to allow their customers access to track how many containers they have rented and when they are due back. Universal Containers uses a Private sharing model for External users. Many of their customers are multi-national corporations with complex Account hierarchies. Each account on the hierarchy represents a department within the same business. One of the requirements is to allow certain community users within the same Account hierarchy to see several departments' containers, based on a custom junction object that relates the Contact to the various Account records that represent the departments.

Which solution solves these requirements?

- A. A Visualforce page that uses a custom controller that specifies without sharing [0 expose the records
- B. A Lightning web component on the Community Home Page that uses Lightning Data Services.
- C. A custom list view on the junction object with filters that will show the proper records based on owner
- **D. An Apex trigger that creates Apex managed sharing records based on the junction object's relationships**

Answer: D

Explanation:

For community users within the same Account hierarchy to see records based on a custom junction object, Apex managed sharing can be used. An Apex trigger can create sharing records based on the junction object relationships, allowing users to see records from different departments as required.

NEW QUESTION # 182

.....

TestValid provides numerous extra features to help you succeed on the Plat-Dev-301 exam, in addition to the Salesforce Plat-Dev-301 exam questions in PDF format and online practice test engine. These include 100% real questions and accurate answers, 1 year of free updates, a free demo of the Salesforce Plat-Dev-301 Exam Questions, a money-back guarantee in the event of failure, and a 20% discount. TestValid is the ideal alternative for your Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) test preparation because it combines all of these elements.
