Axis ANVE (Axis Network Video) Certification Exam is a certification program designed to validate the knowledge and expertise of IT professionals in the field of network video surveillance. It is a globally recognized certification program that is aimed at professionals who are involved in the installation, configuration, and maintenance of Axis network video products.

Certification Topics of Axis ANVE Certification Exam

The exam is based on the ANVE analysis methodology, which is a guide for diagnosing network video technology issues. This methodology was developed by Axis engineers with years of experience in the field of network video. In order to find problems, the analysis must be conducted on three key axes: equipment, network, and performance. As most of you know, this company focuses on network video technology, so you don't need to worry that the questions will be too difficult or irrelevant to your interests.

Our **Axis ANVE Exam Dumps** covers the following objectives of Axis ANVE Exam. The Axis ANV certification exam covers topics with different percentages, including:

- Technical and physical security: 30%

- Infrastructure: 15%
- Network: 40%

Axis Network Video Exam Sample Questions (Q187-Q192):

NEW QUESTION # 187

The term f-stop, or f-number,

- **A. Measures the lens' capability to collect light.**
- B. Relates the focal length of the lens to the zoom factor.
- C. Measures the lens' capability to focus on objects at short distance.
- D. Is the end position of the focus motor in an autofocus system.

Answer: A

NEW QUESTION # 188

Two cameras are streaming 6 Mbit/s each. Approximately how much storage is required to record one hour of video from both streams?

- A. 2.6 GB
- **B. 5.4 GB**
- C. 24.2 GB
- D. 11.4 GB

Answer: B

Explanation:

To calculate the storage required to record one hour of video from two cameras streaming at 6 Mbit/s each, we use the following steps:

* Total bitrate for both cameras: $6 \text{ Mbit/s} \times 2 = 12 \text{ Mbit/s}$

* Convert Mbit/s to Mbyte/s: $12 \text{ Mbit/s} \div 8 = 1.5 \text{ Mbyte/s}$

* Calculate the total data for one hour: $1.5 \text{ Mbyte/s} \times 3600 \text{ seconds} = 5400 \text{ Mbytes}$

* Convert Mbytes to Gbytes: $5400 \text{ Mbytes} \div 1024 = 5.27 \text{ Gbytes}$

Approximately, the storage required is 5.4 GB.

NEW QUESTION # 189

Which is true for a multidirectional camera?

- A. Each sensor is assigned its own IP address
- **B. The sensors are movable to enable optimal usage**
- C. The image from each sensor is automatically dewarped
- D. The lenses move automatically when tracking an object

Answer: B

Explanation:

A multidirectional camera is equipped with multiple sensors that can be independently adjusted to cover different areas. This flexibility allows for optimal usage of the camera by positioning each sensor to capture specific scenes or angles. These sensors are typically fixed in place once set up, but their initial placement can be adjusted to ensure comprehensive coverage. Axis documents specify that multidirectional cameras are designed for customizable installation to meet varying surveillance needs.

NEW QUESTION # 190

To ensure optimal performance of outdoor cameras running video analytics, maintenance is

- A. automated.
- **B. essential.**
- C. optional.
- D. irrelevant.

Answer: B

Explanation:

Maintenance is essential for ensuring the optimal performance of outdoor cameras running video analytics.

Regular maintenance tasks include cleaning the camera lens, checking and updating firmware, inspecting connections, and verifying that analytics software is functioning correctly. These activities help maintain image quality and ensure the accuracy and reliability of the video analytics. Axis installation and maintenance guides recommend routine maintenance to prevent performance degradation and extend the lifespan of the equipment.

NEW QUESTION # 191

What is one of the main purposes of using AXIS Camera Application Platform?

- **A. Loading of applications to be run directly on the camera**
- B. Loading of applications directly to the SD/SDHC card on the camera
- C. Loading of VAPIX applications directly on the camera
- D. Loading a Video Management Software (VMS) to be run directly on the camera

Answer: A

Explanation:

The AXIS Camera Application Platform (ACAP) is a powerful tool that allows users to install and run third-party applications directly on Axis cameras. This capability transforms the cameras into intelligent devices that can perform a variety of tasks, such as video analytics, object recognition, and event detection, without the need for additional hardware. By running applications directly on the camera, ACAP enhances the flexibility and functionality of surveillance systems. Axis Network Video documentation explains how ACAP leverages the processing power of the cameras to deliver advanced features and capabilities.
