NEW QUESTION # 34
A developer needs to create a list of cases for an account in a single Datable in a FlexCard. Like the one shown below.
How can the developer configure the FlexCard to display the case records in this way?

- A. Disable the Repeat Record feature on the FlexCard setup tab
- B. Select the Repeatable Mode property on the data table elements
- C. Enable the Repeat Records feature on the FlexCard Setup tab
- D. Enable the record Looping feature on the data table elements

Answer: B

Explanation:
The Repeatable Mode property on the data table elements allows the developer to display multiple records in a single data table. The Repeat Records feature on the FlexCard Setup tab is used to display multiple FlexCards for each record in a data source. The Record Looping feature on the data table elements is used to iterate over a list of records and perform actions on each record. The Overwrite Target for all Null input checkbox on the Account id field is used to overwrite the existing value in the target object with null if the input value is null.

NEW QUESTION # 35
A developer creates a new FlexCard to display customer data and actions, such as updating billing information and changing the contact for the customer account. The FlexCard contains 10 fields and 5 actions.
During testing, several fields display with the correct data, but one of the fields shows only the label.
What could cause this?

- A. There are no test parameters configured.
- B. The fields have exceeded the maximum number allowed on the card.
- C. {recordld} us misspelled in the Data Source Input Map.
- D. The field is null 0 the Salesforce record.
