Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q289-Q294):

NEW QUESTION # 289

A user has created a new EBS volume from an existing snapshot. The user mounts the volume on the instance to which it is attached. Which of the below mentioned options is a required step before the user can mount the volume?

- A. Create the file system of the volume
- B. No step is required. The user can directly mount the device
- C. Run a cyclic check on the device for data consistency
- D. Resize the volume as per the original snapshot size

Answer: B

Explanation:

When a user is trying to mount a blank EBS volume, it is required that the user first creates a file system within the volume. If the volume is created from an existing snapshot then the user needs not to create a file system on the volume as it will wipe out the existing data.

NEW QUESTION # 290

A user is enabling logging on a particular bucket. Which of the below mentioned options may be best suitable to allow access to the log bucket?

- A. Create an IAM Role which has access to the log bucket
- B. Provide ACL for the logging group
- C. Create an IAM policy and allow log access
- D. It is not possible to enable logging on the S3 bucket

Answer: B

Explanation:

The only recommended use case for the S3 bucket ACL is to grant the write permission to the Amazon S3 Log Delivery group to write access log objects to the user's bucket.

NEW QUESTION # 291

You are tasked with moving a legacy application from a virtual machine running inside your datacenter to an Amazon VPC. Unfortunately this app requires access to a number of on-premises services and no one who configured the app still works for your company. Even worse there's no documentation for it. What will allow the application running inside the VPC to reach back and access its internal dependencies without being reconfigured? (Choose 3 answers)

- A. An Internet Gateway to allow a VPN connection.
- B. An Elastic IP address on the VPC instance
- C. An IP address space that does not conflict with the one on-premises
- D. A VM Import of the current virtual machine
- E. An AWS Direct Connect link between the VPC and the network housing the internal services

Answer: E

NEW QUESTION # 292

Typically, you want your application to check whether a request generated an error before you spend any time processing results. The easiest way to find out if an error occurred is to look for an _____ node in the response from the Amazon RDS API.

- A. FALSE
- B. Error

- C. Incorrect

Answer: B

NEW QUESTION # 293

A Developer is writing a Linux-based application to run on AWS Elastic Beanstalk. Application requirements state that the application must maintain full capacity during updates while minimizing cost.

Which type of Elastic Beanstalk deployment policy should the Developer specify for the environment?

- A. All at Once
- B. Rolling
- C. **Immutable**
- D. Rolling with additional batch

Answer: C
