Our NGFW-Engineer exam simulation is a great tool to improve our competitiveness. After we use our study materials, we can get the Palo Alto Networks certification faster. This certification gives us more opportunities. Compared with your colleagues around you, with the help of our NGFW-Engineer preparation questions, you will also be able to have more efficient work performance. Our NGFW-Engineer Study Materials can bring you so many benefits because they have the following features. I hope you can use a cup of coffee to learn about our NGFW-Engineer training engine. Perhaps this is the beginning of your change.

## Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"><li>Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.</li></ul> |

|         |  |
|---------|--|
| Topic 2 | <ul style="list-style-type: none"> <li>• PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active and active</li> <li>• active and active</li> <li>• passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPsec, quantum-resistant cryptography, and GRE tunnels.</li> </ul> |
| Topic 3 | <ul style="list-style-type: none"> <li>• PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.</li> </ul>                                 |

## 2026 Pass-Sure Authorized NGFW-Engineer Test Dumps | NGFW-Engineer 100% Free Latest Dump

Sometimes if you want to pass an important test, to try your best to exercise more questions is very necessary, which will be met by our NGFW-Engineer exam software, and the professional answer analysis also can help you have a better understanding. The multiple versions of free demo of NGFW-Engineer Exam Materials can be offered in our website. Try to find which version is most to your taste; we believe that our joint efforts can make you pass NGFW-Engineer certification exam.

### Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q104-Q109):

#### NEW QUESTION # 104

Which CLI command is used to configure the management interface as a DHCP client?

- A. set network dhcp interface management
- B. set network dhcp type management-interface
- C. set deviceconfig management type dhcp-client
- D. set deviceconfig system type dhcp-client

**Answer: C**

Explanation:

To configure the management interface as a DHCP client on a Palo Alto Networks NGFW, the correct CLI command is set deviceconfig management type dhcp-client.

This command configures the management interface to obtain an IP address dynamically using DHCP.

#### NEW QUESTION # 105

Which forwarding methods can be used on the Objects tab when configuring the Log Forwarding profile?

- A. Panorama, ADEM, syslog
- B. Syslog, HTTP, NetFlow
- C. SNMP, HTTP, RADIUS
- D. Panorama, syslog, email

**Answer: D**

Explanation:

When configuring the Log Forwarding profile on a Palo Alto Networks firewall, the forwarding methods available include:

Panorama: For forwarding logs to a Panorama management system.

Syslog: For forwarding logs to a syslog server.

Email: For sending logs via email.

### NEW QUESTION # 106

To maintain security efficacy of its public cloud resources by using native tools, a company purchases Cloud NGFW credits to replicate the Panorama, PA-Series, and VM-Series devices used in physical data centers.

Resources exist on AWS and Azure:

The AWS deployment is architected with AWS Transit Gateway, to which all resources connect. The Azure deployment is architected with each application independently routing traffic. The engineer deploying Cloud NGFW in these two cloud environments must account for the following:

Minimize changes to the two cloud environments

Scale to the demands of the applications while using the least amount of compute resources. Allow the company to unify the Security policies across all protected areas. Which two implementations will meet these requirements? (Choose two.)

- A. Deploy a VM-Series firewall in AWS in each VPC, create an IPSec tunnel between AWS and Azure, and manage the policy with Panorama.
- B. Deploy Cloud NGFW for Azure in vNET/s, update the vNET/s routing to path traffic through the deployed NGFWs, and manage the policy with Panorama.
- C. Deploy Cloud NGFW for Azure in vWAN, create a vWAN to route all appropriate traffic to the Cloud NGFW attached to the vWAN, and manage the policy with local rules.
- D. Deploy Cloud NGFW for AWS in a centralized Security VPC, update the Transit Gateway to route all appropriate traffic through the Security VPC, and manage the policy with Panorama.

**Answer: B,D**

Explanation:

To meet the company's requirements - minimizing changes to the cloud environments, optimizing compute resources, and unifying security policies - the best approach is to deploy Cloud NGFW solutions natively for AWS and Azure while managing policies centrally with Panorama.

In Azure, using Cloud NGFW for Azure deployed within vNETs allows traffic to be routed through security appliances efficiently without requiring a complete re-architecture. This approach aligns with Azure's existing routing mechanism while maintaining security. In AWS, deploying Cloud NGFW for AWS in a centralized Security VPC and integrating it with AWS Transit Gateway enables traffic inspection for all connected VPCs without modifying individual workloads.

This method ensures efficient scaling and minimal infrastructure changes while maintaining security consistency.

### NEW QUESTION # 107

An engineer is implementing a new rollout of SAML for administrator authentication across a company's Palo Alto Networks NGFWs. User authentication on company firewalls is currently performed with RADIUS, which will remain available for six months, until it is decommissioned.

The company wants both authentication types to be running in parallel during the transition to SAML.

Which two actions meet the criteria? (Choose two.)

- A. Create and apply an authentication profile with the "SAML Identity Provider" Server Profile.
- B. Create a testing and rollback plan for the transition from Radius to SAML, as the two authentication profiles cannot be run in tandem.
- C. Create and add the "SAML Identity Provider" Server Profile to the authentication profile for the "RADIUS" Server Profile.
- D. Create an authentication sequence that includes both the "RADIUS" Server Profile and "SAML Identity Provider" Server Profile to run the two services in tandem.

**Answer: A,D**

Explanation:

B). Create an authentication sequence that orders the RADIUS profile first followed by the SAML profile, allowing the firewall to attempt RADIUS authentication and fall back to SAML if needed, supporting tandem operation for administrator logins.

C). Create and apply an authentication profile using the SAML Identity Provider Server Profile, which can then be sequenced alongside the existing RADIUS profile without disrupting current authentication.

## NEW QUESTION # 108

What is the correct sequence of evaluation for Security policy rulebases?

- A. Panorama Shared Rules --> Local Firewall Rules --> Device Group Rules
- **B. Panorama Pre-Rules --> Local Firewall Rules --> Panorama Post-Rules**
- C. Panorama Post-Rules --> Panorama Pre-Rules --> Local Firewall Rules
- D. Local Firewall Rules --> Panorama Pre-Rules --> Panorama Post-Rules

**Answer: B**

Explanation:

Security policy rules are evaluated in a strict top-down order starting with Panorama Pre-Rules, followed by the local firewall rulebase, and finally Panorama Post-Rules, ensuring centrally enforced policies are applied before and after locally defined rules.

## NEW QUESTION # 109

.....

The Web-Based Palo Alto Networks NGFW-Engineer practice test evaluates your Palo Alto Networks Next-Generation Firewall Engineer exam preparation with its self-assessment features. With this computer-based program, you may automate the entire Palo Alto Networks exam testing procedure. The web-based Palo Alto Networks NGFW-Engineer practice test elegantly designed interface is compatible with all browsers, including Internet Explorer, Safari, Opera, Google Chrome, and Mozilla Firefox. It will make practice and preparation for the Palo Alto Networks NGFW-Engineer Exam more intelligent, quick, and simple. So, you can be confident that you will find all you need to know to pass the Palo Alto Networks NGFW-Engineer exam questions on the first try.
