Cisco 350-901 Valuable Feedback, Valid 350-901 Exam Discount

The Developing Applications using Cisco Core Platforms and APIs (DEVCOR) (350-901) practice questions are designed by experienced and qualified Developing Applications using Cisco Core Platforms and APIs (DEVCOR) (350-901) exam trainers. They have the expertise, knowledge, and experience to design and maintain the top standard of Developing Applications using Cisco Core Platforms and APIs (DEVCOR) (350-901) exam dumps. So rest assured that with the Developing Applications using Cisco Core Platforms and APIs (DEVCOR) (350-901) exam real questions you can not only ace your Developing Applications using Cisco Core Platforms and APIs (DEVCOR) (350-901) exam dumps preparation but also get deep insight knowledge about Cisco 350-901 exam topics. So download Developing Applications using Cisco Core Platforms and APIs (DEVCOR) (350-901) exam questions now and start this journey.

Cisco Developing Applications using Cisco Core Platforms and APIs (DEVCOR) Sample Questions (Q217-Q222):

NEW QUESTION # 217

A developer is creating a Python script to use the Webex Teams REST API to list joined spaces, and gracefully handle and print the errors it receives. Drag and drop the code snippets from the left onto the item numbers on the right that match the missing sections in the exhibit to complete the script.

```
import requests

url = "https://api.ciscospark.com/v1/rooms"
bearer = "BEARER TOKEN HERE"
headers = {"content-type": "application/json", "Authorization": "Bearer " + bearer}

<item 1>:
    response = requests.get(url, headers=headers, verify=False)
    response.<item 2>
<item 3> requests.exceptions.HTTPError as err:
    if response.status_code == <item 4>:
        print("Check Bearer Token")
    elif response.status_code == <item 5>:
        print("Check API Endpoint uri")
    elif response.status_code == 500:
        print("Server Error, Try again Later")
    else:
        print("HTTP Error") + str(err)
```

401	<item 1>
404	<item 2>
try	<item 3>
except	<item 4>
raise_for_status()	<item 5>

Answer:

Explanation:

401	try
404	raise_for_status()
try	except
except	401
raise_for_status()	404

NEW QUESTION # 218

DRAG DROP

OAuth2 three-legged authorization code grant.

Refer to the exhibit. Drag and drop the steps from the left into the correct order of operation on the right for a successful OAuth2 three-legged authorization code grant flow.

Select and Place:

Answer Area

Answer:

Explanation:

Answer Area

Section: Software Development and Design

NEW QUESTION # 219

Refer to the exhibit.

```

apiVersion: v1
clusters:
- cluster:
    certificate-authority: fake-ca-file
    server: https://1.2.3.4
    name: development
- cluster:
    insecure-skip-tls-verify: true
    server: https://5.6.7.8
    name: scratch
contexts:
- context:
    cluster: development
    namespace: frontend
    user: developer
    name: dev-frontend
- context:
    cluster: development
    namespace: storage
    user: developer
    name: dev-storage
- context:
    cluster: scratch
    namespace: default
    user: experimenter
    name: exp-scratch
current-context: ""
kind: Config
preferences: {}

  user:
    client-certificate: fake-cert-file
    client-key: fake-key-file
- name: experimenter
  user:
    password: some-password
    username: exp

```

A kubeconfig file to manage access to Kubernetes clusters is shown. How many Kubernetes clusters are defined in the file, and which cluster FS accessed using username/password authentication rather than using a certificate?

- A. two clusters: scratch
- B. three clusters: development
- C. two dusters; development
- D. three dusters; scratch

Answer: A

NEW QUESTION # 220

Drag and drop the code from the bottom onto the box where the code is missing in the Python script to execute a REST API call to query all the NTP policy names and print the name of each policy. Not all options are used.

```

import requests, json
from intersight_auth import IntersightAuth

AUTH = IntersightAuth(
    secret_key_filename= '/tmp/secretfile.txt',
    api_key_id= 'api-key-id')
URL= 'https://www.intersight.com/api/v1/'

operations = [ {"resource_path": " ",
                "request_method": "GET" } ]

:
response = None
if operation['resource_path'] == "ntp/Policies":
    response = requests.get( )
    = response.json()

for key, value in jsonResponse.items():
    if key == "Name":
        print(value)

```

for operation in operations

URL+operation
['resource_path'], auth=AUTH

jsonResponse

URL+operation[resource_path],
auth=api_key_id

ntp/Policies

response.json

for each operations

Answer:

Explanation:

```

import requests, json
from intersight_auth import IntersightAuth

AUTH = IntersightAuth(
    secret_key_filename= 'tmp/secretfile.txt',
    api_key_id= 'api-key-id')
URL= 'https://www.intersight.com/api/v1/'

operations = [ {"resource_path": " ntp/Policies ",
               "request_method": "GET" } ]

for operation in operations :
    response = None
    if operation['resource_path'] == "ntp/Policies":
        response = requests.get( URL+operation
                                ['resource_path'], auth=AUTH )

        jsonResponse = response.json()
        for key, value in jsonResponse.items():
            if key == "Name":
                print (value)

```

for operation in operations

URL+operation
['resource_path'], auth=AUTH

jsonResponse

URL+operation[resource_path],
auth=api_key_id

ntp/Policies

response.json

for each operations

NEW QUESTION # 221

Drag and drop the code onto the snippet to update a SSID in Meraki using the Dashboard API. Not all options are used.

```

base_url = "https://api.meraki.com/api/v0"
network_id = "N_1234567890"
requests.put(
    [ ] + " /networks/" + [ ] + "/ssids/0",
    headers = {
        "X-Cisco-Meraki-API-Key": [ ],
        "Content-Type": " [ ] "
    },
    data = json.dumps ({
        "number": 0,
        "name": ssid,
        "enabled": True,
        "authMode": "psk",
        "psk": [ ],
        " [ ] ": "wpa",
        "wpaEncryptionMode": "WPA2 only"
    })

```

application/json

organization_id

network_id

wireless_password

base_url

api_key

encryptionMode

Answer:

Explanation:

```

base_url = "https://api.meraki.com/api/v0"
network_id = "N_1234567890"
requests.put(
    base_url + " /networks/" + network_id + "/ssids/0",
    headers = {
        "X-Cisco-Meraki-API-Key": api_key,
        "Content-Type": " application/json "
    },
    data = json.dumps ({
        "number": 0,
        "name": ssid,
        "enabled": True,
        "authMode": "psk",
        "psk": wireless_password,
        " encryptionMode ": "wpa",
        "wpaEncryptionMode": "WPA2 only"
    })

```

application/json

organization_id

network_id

wireless_password

base_url

api_key

encryptionMode

```

base_url = "https://api.meraki.com/api/v0"
network_id = "N_1234567890"
requests.put(
    base_url + "/networks/" + network_id + "/ssids/0",
    headers = {
        "X-Cisco-Meraki-API-Key": api_key,
        "Content-Type": "application/json"
    },
    data = json.dumps({
        "number": 0,
        "name": ssid,
        "enabled": True,
        "authMode": "psk",
        "psk": wireless_password,
        "encryptionMode": "wpa",
        "wpaEncryptionMode": "WPA2 only"
    })
)

```

NEW QUESTION # 222

.....

All these three Cisco 350-901 exam questions formats contain the real, valid, and error-free Developing Applications using Cisco Core Platforms and APIs (DEVCOR) (350-901) exam practice test questions that are ideal study material for quick Cisco 350-901 Exam Preparation.
