ServiceNow Valid CAD Exam Test: Certified Application Developer-ServiceNow - Pass4SureQuiz PDF Download Free

As is known to us, perfect after-sales service for buyers is a very high value. Our CAD guide torrent not only has the high quality and efficiency but also the perfect service system after sale. If you decide to buy our CAD test torrent, we would like to offer you 24-hour online efficient service, you have the right to communicate with us without any worries at any time you need, and you will receive a reply, we are glad to answer your any question about our CAD Guide Torrent. You have the right to communicate with us by online contacts or by an email. The high quality and the perfect service system after sale of our CAD exam questions have been approved by our local and international customers. So you can rest assured to buy.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q73-Q78):

NEW QUESTION # 73

What syntax is used in a Record Producer script to access values from Record Producer form fields?

- A. `current.field_name`
- **B. `producer.variable_name`**
- C. `current.variable_name`
- D. `producer.field_name`

Answer: B

Explanation:

The syntax used in a Record Producer script to access values from Record Producer form fields is `producer.variable_name`. A Record Producer is a type of catalog item that allows users to create records on any table from the service catalog. A Record Producer script is a server-side script that runs when a Record Producer is submitted, and can be used to set values or perform actions on the generated record. The producer object is a global object that represents the Record Producer form and its variables. The `variable_name` is the name of the variable defined in the Record Producer. References: [ServiceNow Docs - Record producers], [ServiceNow Docs - Record producer script] Reference: https://community.servicenow.com/community?id=community_question&sys_id=cc3803addb1cdbc01dcaf3231f9619b6

NEW QUESTION # 74

Which options are strategies for debugging client-side scripts?

Choose 2 answers

- A. gs.log()
- B. gs.addErrorMessage()
- C. g_form.addInfoMessage()
- D. jslog()

Answer: C,D

Explanation:

Debugging client-side scripts in ServiceNow involves using methods that provide feedback during script execution. The following methods are commonly used:

* g_form.addInfoMessage():

* Description: Displays informational messages to the user within the form interface.

* Usage: g_form.addInfoMessage('Your message here');

* Purpose: Useful for providing real-time feedback or debugging information directly on the form during script execution.

* jslog():

* Description: Logs messages to the browser's console.

* Usage: jslog('Your debug message here');

* Purpose: Helps developers output debugging information to the browser console, which can be inspected during development.

Incorrect Options:

* gs.addErrorMessage(): This is a server-side method used to display error messages to the user and is not applicable for client-side debugging.

* gs.log(): Another server-side method used to log messages to system logs, not suitable for client-side script debugging.

NEW QUESTION # 75

Which class is NOT part of the Client side scoped APIs?

- A. GuideDialogWindow
- B. GuideAjax
- C. GuideForm
- D. GuideRecord

Answer: D

Explanation:

This class allows you to create and manipulate dialog windows on the user interface. You can use this class to display messages, forms, or custom HTML content in a modal window.

GuideAjax: This class allows you to make asynchronous calls to the server and process the response. You can use this class to retrieve data, execute scripts, or perform actions on the server without reloading the page.

GuideForm: This class allows you to access and manipulate the fields and values on a form. You can use this class to get or set field values, show or hide fields, add or remove options, or validate field inputs.

The class GuideRecord is not part of the Client side scoped APIs. GuideRecord is part of the Server side scoped APIs, which are a set of classes and methods that allow you to interact with the database and perform server-side logic on the ServiceNow platform. GuideRecord is a class that represents a record in a table and allows you to query, insert, update, or delete records on the server.
