NEW QUESTION # 30
Which two actions will allow a security analyst to review updated commands from the core pack and interpret the results without altering the incident audit? (Choose two)

- A. Create a playbook with the commands and run it from within the War Room
- B. Run the core commands directly from the Command and Scripts menu inside playground
- C. Run the core commands directly from the playground and invite other collaborators.
- D. Run the core commands directly by typing them into the playground CLI.

Answer: B,D

Explanation:
Correct answers areBandD.
In Cortex XSIAM/XSOAR, the playground provides a safe environment for testing commands without modifying the incident audit log or impacting live incidents.
* Option B:Running commands from the "Command and Scripts" menu within the playground allows review and interpretation of command outputs safely and isolated from actual incidents.
* Option D:Typing commands directly into the playground CLI similarly enables secure review and interpretation of results without affecting the incident audit or live data.
Options A and C are incorrect because:
* Option A invites collaboration, potentially impacting visibility or causing accidental changes.
* Option C creates playbooks that execute directly within the War Room, thus interacting with real incidents.
