Your privacy and personal right are protected by our company and corresponding laws and regulations on our Terraform-Associate-004 study guide. Whether you are purchasing our Terraform-Associate-004 training questions, installing or using them, we won't give away your information to other platforms, and the whole transaction process will be open and transparent. Therefore, let us be your long-term partner and we promise our Terraform-Associate-004 Preparation exam won't let down.

HashiCorp Terraform-Associate-004 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Terraform state management: This domain focuses on managing Terraform's state file, understanding local and remote backends, implementing state locking, and handling resource drift.
Topic 2	<ul style="list-style-type: none">• Maintain infrastructure with Terraform: This domain addresses importing existing infrastructure into Terraform, inspecting state using CLI commands, and using verbose logging for troubleshooting.
Topic 3	<ul style="list-style-type: none">• Terraform configuration: This domain covers writing Terraform code including resources and data blocks, using variables and outputs, handling complex types, creating dynamic configurations with expressions and functions, managing dependencies, implementing validation, and handling sensitive data.
Topic 4	<ul style="list-style-type: none">• Core Terraform workflow: This domain focuses on the essential workflow steps: initializing directories, validating configurations, generating execution plans, applying changes, destroying infrastructure, and formatting code.
Topic 5	<ul style="list-style-type: none">• Infrastructure as Code (IaC) with Terraform: This domain covers the foundational concept of Infrastructure as Code and how Terraform enables managing resources across multiple cloud providers and services through a unified workflow.
Topic 6	<ul style="list-style-type: none">• Terraform modules: This domain explains organizing and reusing code through modules, understanding variable scope between modules, implementing modules in configurations, and managing module versions.

Topic 7	<ul style="list-style-type: none">• HCP Terraform: This domain covers using HashiCorp Cloud Platform Terraform for infrastructure provisioning, collaboration and governance features, organizing workspaces and projects, and configuring integrations.

Terraform-Associate-004 Reliable Test Pattern, Reliable Terraform-Associate-004 Test Notes

I can assure you that we will provide considerate on line after sale service about our Terraform-Associate-004 exam questions for you in twenty four hours a day, seven days a week. Therefore, after buying our Terraform-Associate-004 study guide, if you have any questions about our Terraform-Associate-004 Learning Materials, please just feel free to contact with our online after sale service staffs. They will give you the most professional advice for they know better on our Terraform-Associate-004 training quiz.

HashiCorp Certified: Terraform Associate (004) (HCTA0-004) Sample Questions (Q95-Q100):

NEW QUESTION # 95

Which option cannot be used to keep secrets out of Terraform configuration files?

- A. A -var flag
- **B. secure string**
- C. A Terraform provider
- D. Environment variables

Answer: B

Explanation:

A secure string is not a valid option to keep secrets out of Terraform configuration files. A secure string is a feature of AWS Systems Manager Parameter Store that allows you to store sensitive data encrypted with a KMS key. However, Terraform does not support secure strings natively and requires a custom data source to retrieve them. The other options are valid ways to keep secrets out of Terraform configuration files. A Terraform provider can expose secrets as data sources that can be referenced in the configuration. Environment variables can be used to set values for input variables that contain secrets. A -var flag can be used to pass values for input variables that contain secrets from the command line or a file. Reference = [AWS Systems Manager Parameter Store], [Terraform AWS Provider Issue #55], [Terraform Providers], [Terraform Input Variables]

NEW QUESTION # 96

Which command(s) adds existing resources in a public cloud into Terraform state?

- A. terraform refresh
- B. All of these
- C. terraform plan
- D. terraform init
- **E. terraform import**

Answer: E

Explanation:

Importing Existing Resources: The terraform import command brings resources already deployed in a cloud environment into Terraform's state file, allowing Terraform to manage them.

Workflow Usage: Importing is vital when managing resources created outside of Terraform or those in place before Terraform adoption.

Refer to Terraform's import command documentation.

NEW QUESTION # 97

terraform destroy is the only way to remove infrastructure.

- A. True
- B. False

Answer: B

Explanation:

While terraform destroy is a common way to remove infrastructure, it is not the only way.

You can also remove resources by deleting them from the configuration and running terraform apply.

Manually deleting resources in the cloud provider can also remove infrastructure (but Terraform won't be aware unless the state is updated).

Official Terraform Documentation Reference:

terraform destroy - HashiCorp Documentation

NEW QUESTION # 98

What functionality do providers offer in Terraform? (Pick the 3 correct responses below.)

- A. Interact with cloud provider APIs.
- B. Provision resources for public cloud infrastructure services.
- C. Enforce security and compliance policies.
- D. Provision resources for on-premises infrastructure services.
- E. Group a collection of Terraform configuration files that map to a single state file.

Answer: A,B,D

Explanation:

Rationale for Correct Answer:

B: Providers can manage on-premises services (e.g., vSphere, Kubernetes, GitHub, DNS, databases), not just public cloud.

C: Providers provision and manage public cloud resources (AWS, Azure, Google Cloud, etc.).

D: Providers are the plugin layer that interacts with APIs (cloud/service APIs) to create, read, update, and delete resources.

Analysis of Incorrect Options (Distractors):

A: This describes how Terraform configuration and state are organized (root module/workspace/state), not a provider function.

E: Policy enforcement is handled by separate policy-as-code systems (e.g., Sentinel/OPA integrations) rather than being a core provider responsibility.

Key Concept: Providers as plugins that implement resource/data source types and perform API interactions for many platforms.

Reference: Terraform Objectives - Manage Terraform Resources and Providers (provider purpose and capabilities).

NEW QUESTION # 99

You have declared a variable called var.list which is a list of objects that all have an attribute id . Which options will produce a list of the IDs? Choose two correct answers.

- A. var.list[*].id
- B. { for o in var.lst : o => o.id }
- C. [var.list [*], id]
- D. [for o in var.list : o.Id]

Answer: A,D

Explanation:

These are two ways to produce a list of the IDs from a list of objects that have an attribute id, using either a for expression or a splat expression syntax.

NEW QUESTION # 100

.....

Our website is considered to be the most professional platform offering Terraform-Associate-004 practice guide, and gives you the

best knowledge of the Terraform-Associate-004 study materials. Passing the exam has never been so efficient or easy when getting help from our Terraform-Associate-004 Preparation engine. We can claim that once you study with our Terraform-Associate-004 exam questions for 20 to 30 hours, then you will be able to pass the exam with confidence.
