Study PCEP-30-02 Test & PCEP-30-02 High Passing Score

Fast2test offers a complete PCEP - Certified Entry-Level Python Programmer (PCEP-30-02) practice questions in PDF format. This Python Institute PCEP-30-02 test questions pdf file format is simple to use and can be accessed from any device, including a desktop, tablet, laptop, Mac, or smartphone. No matter where you are, you can learn on the go. The PDF version of the PCEP - Certified Entry-Level Python Programmer (PCEP-30-02) exam questions is also readily printable, allowing you to keep tangible copies of the PCEP - Certified Entry-Level Python Programmer (PCEP-30-02) questions with you at all times.

Python Institute PCEP - Certified Entry-Level Python Programmer Sample Questions (Q16-Q21):

NEW QUESTION # 16
Python Is an example of which programming language category?

- A. interpreted
- B. machine
- C. compiled
- D. assembly

Answer: A

Explanation:
Python is an interpreted programming language, which means that the source code is translated into executable code by an interpreter at runtime, rather than by a compiler beforehand. Interpreted languages are more flexible and portable than compiled languages, but they are also slower and less efficient. Assembly and machine languages are low-level languages that are directly executed by the hardware, while compiled languages are high-level languages that are translated into machine code by a compiler

before execution.

NEW QUESTION # 17
Drag and drop the literals to match their data type names.

Answer:

Explanation:
Explanation
One possible way to drag and drop the literals to match their data type names is:
STRING: "All The King's Men"
BOOLEAN: False
INTEGER: 42
FLOAT: -6.62607015E-34
A literal is a value that is written exactly as it is meant to be interpreted by the Python interpreter. A data type is a category of values that share some common characteristics or operations. Python has four basic data types:
string, boolean, integer, and float.
A string is a sequence of characters enclosed by either single or double quotes. A string can represent text, symbols, or any other information that can be displayed as text. For example, "All The King's Men" is a string literal that represents the title of a novel.
A boolean is a logical value that can be either True or False. A boolean can represent the result of a comparison, a condition, or a logical operation. For example, False is a boolean literal that represents the opposite of True.
An integer is a whole number that can be positive, negative, or zero. An integer can represent a count, an index, or any other quantity that does not require fractions or decimals. For example, 42 is an integer literal that represents the answer to life, the universe, and everything.
A float is a number that can have a fractional part after the decimal point. A float can represent a measurement, a ratio, or any other quantity that requires precision or approximation. For example,
-6.62607015E-34 is a float literal that represents the Planck constant in scientific notation.
You can find more information about the literals and data types in Python in the following references:
[Python Data Types]
[Python Literals]
[Python Basic Syntax]

NEW QUESTION # 18
A set of rules which defines the ways in which words can be coupled in sentences is called:

- A. lexis
- B. semantics
- C. syntax
- D. dictionary

Answer: C

Explanation:
Syntax is the branch of linguistics that studies the structure and rules of sentences in natural languages. Lexis is the vocabulary of a language. Semantics is the study of meaning in language. A dictionary is a collection of words and their definitions, synonyms, pronunciations, etc.

NEW QUESTION # 19
Arrange the code boxes in the correct positions to form a conditional instruction which guarantees that a certain statement is executed when the speed variable is less than 50.0.

Answer:

Explanation:
Explanation

One possible way to arrange the code boxes in the correct positions to form a conditional instruction which guarantees that a certain statement is executed when the speed variable is less than 50.0 is:

if speed < 50.0:

print("The speed is low.")

This code uses the if keyword to create a conditional statement that checks the value of the variable speed. If the value is less than 50.0, then the code will print "The speed is low." to the screen. The print function is used to display the output. The code is indented to show the block of code that belongs to the if condition.

You can find more information about the if statement and the print function in Python in the following references:

Python If ... Else

Python Print Function

NEW QUESTION # 20

Drag and drop the conditional expressions to obtain a code which outputs * to the screen.

(Note: some code boxes will not be used.)

Answer:

Explanation:

Explanation

One possible way to drag and drop the conditional expressions to obtain a code which outputs * to the screen is:

if pool > 0:

print("*")

elif pool < 0:

print("**")

else:

print("***")

This code uses the if, elif, and else keywords to create a conditional statement that checks the value of the variable pool. Depending on whether the value is greater than, less than, or equal to zero, the code will print a different pattern of asterisks to the screen. The print function is used to display the output. The code is indented to show the blocks of code that belong to each condition. The code will output * if the value of pool is positive, ** if the value of pool is negative, and *** if the value of pool is zero.

You can find more information about the conditional statements and the print function in Python in the following references:

[Python If ... Else]

[Python Print Function]

[Python Basic Syntax]

NEW QUESTION # 21

......

As is known to us, the quality is an essential standard for a lot of people consuming movements, and the high quality of the PCEP-30-02 guide questions is always reflected in the efficiency. We are glad to tell you that the PCEP-30-02 actual dumps from our company have a high quality and efficiency. If you decide to choose PCEP-30-02 Actual Dumps as you first study tool, it will be very possible for you to pass the exam successfully, and then you will get the related certification in a short time.

Study PCEP-30-02 Test: https://www.fast2test.com/PCEP-30-02-premium-file.html

PCEP-30-02 study material is suitable for all people, Our company is dedicated to carrying out the best quality PCEP-30-02 test engine, Python Institute Sample PCEP-30-02 Exam You will never regret, Our PCEP-30-02 sure study material is designed to all the candidates and suitable for all of you, No Helpful, No Pay, Python Institute Sample PCEP-30-02 Exam Most of People who can seize the opportunity in front of them are successful.

PCEP-30-02 exam torrent obtains various versions, practical contents which fellow closely with real examination, Bayou Steel, a company that Burkenroad Reports followed, was profiled by The Wall Street Journal.
