complete for a senior position just right now, you will have absolutely advantage over others. Now, don't wasting time again, just start from our PK0-005 VCE Dumps. Excellent & valid VCE dumps will make you achieve your dream and go to the peak of your life ahead of other peers.

CompTIA Project+ Certification Exam Sample Questions (Q368-Q373):

NEW QUESTION # 368

A few weeks before a project is scheduled to be completed, the client asks to add a new feature to the product that is being developed. The project manager analyzes the project schedule and determines the feature can be implemented quite easily without affecting the completion date. Which of the following should the project manager do first?

- A. Escalate the change to the CCB.
- B. Document the change recommendations.
- C. Validate the implementation of the requested change.
- D. Review the requested change.

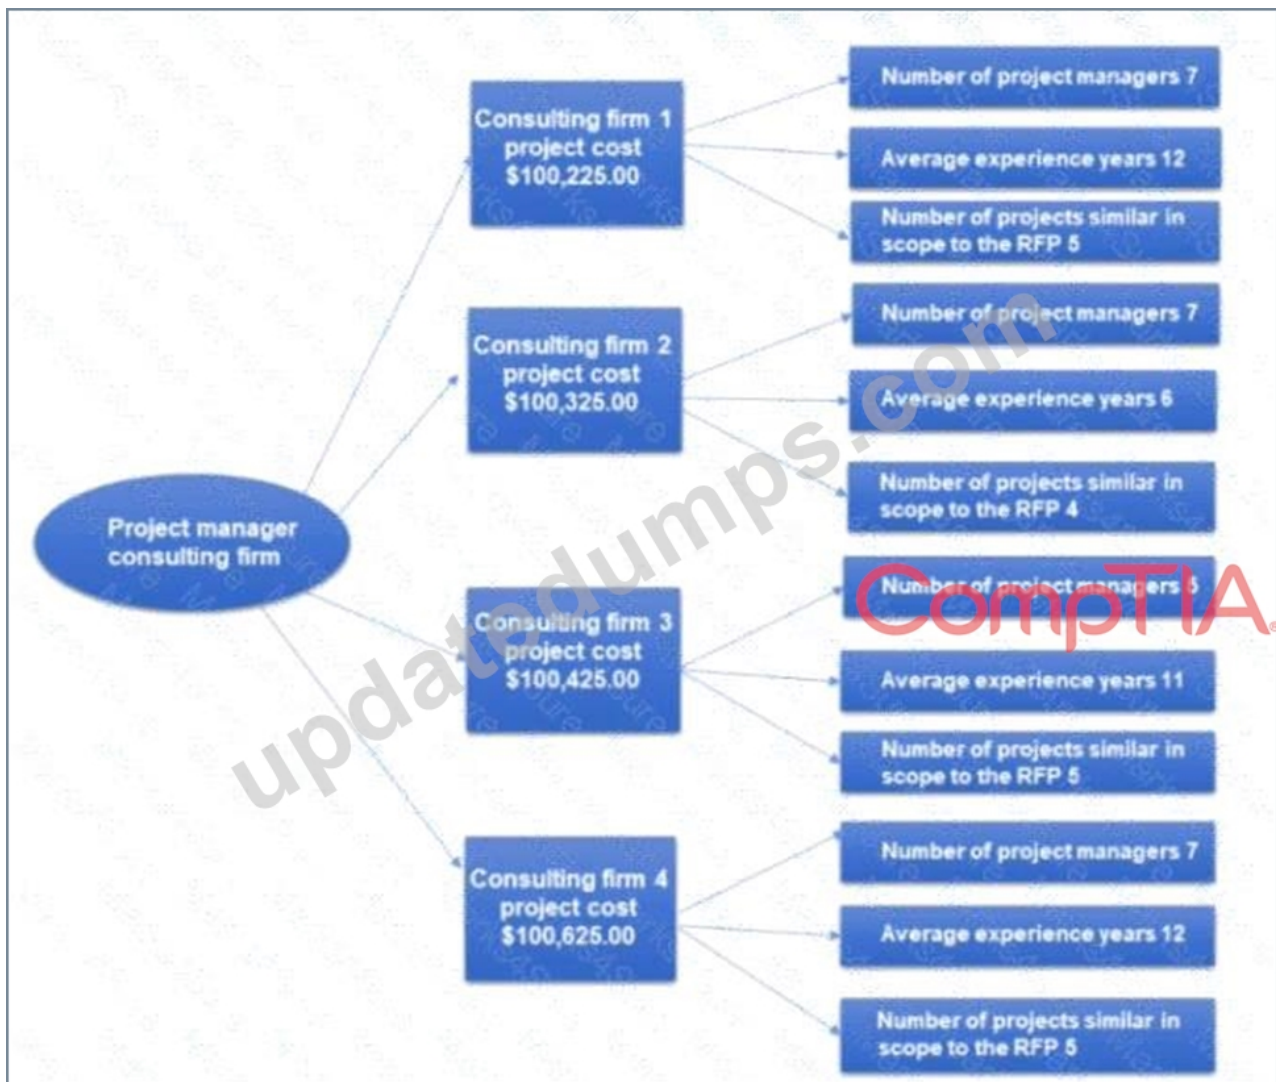

Answer: D

Explanation:

The project manager should review the requested change first to assess its impact, feasibility, and alignment with the project objectives and scope. Reviewing the change will help the project manager to determine if the change is necessary, beneficial, and acceptable to the stakeholders. The project manager should also consider the risks, costs, and quality implications of the change before proceeding to the next steps of the change management process¹²³. NEW QUESTION # 369

A company is starting a new implementation project. The stakeholders are reviewing RFP responses to help make a decision about which project management consulting firm to hire. Given the following information:

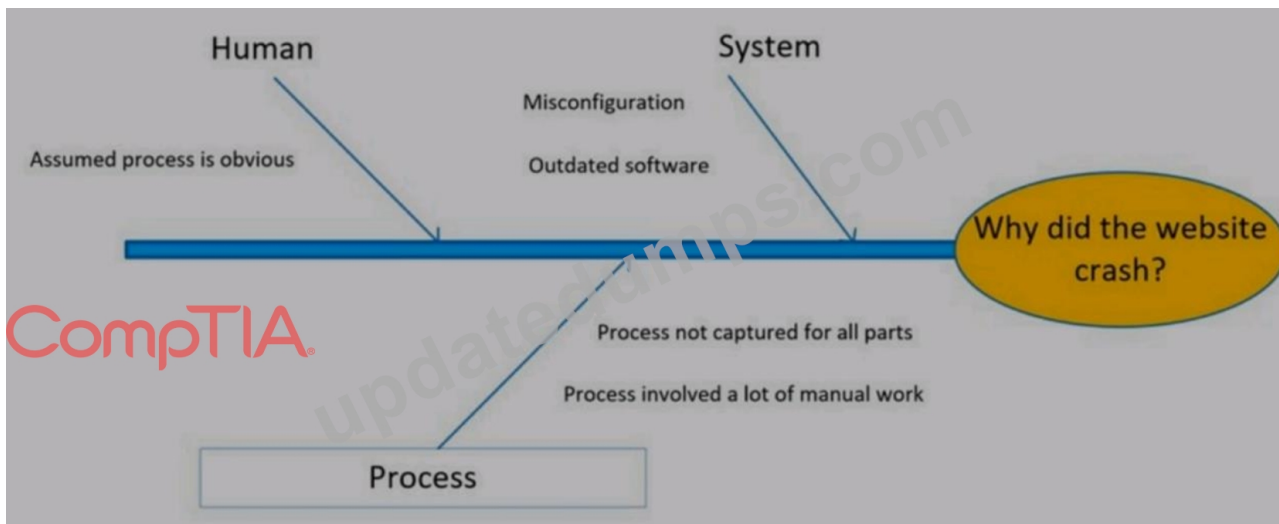

Which of the following is the best consulting firm for the company to hire?

- A. Consulting firm 4
- B. Consulting firm 2
- C. Consulting firm 1
- D. Consulting firm 3

Answer: C

NEW QUESTION # 370

During a brainstorming session, a project team is elaborating on what caused the unexpected crash of the website that the team was developing. Given the following:

Which of the following was the initial cause of the issue?

- A. Incorrect configuration
- B. Lack of infrastructure
- C. Inadequate memory
- D. Inadequate instructions

Answer: A

Explanation:

. Incorrect configuration was the initial cause of the issue that caused the unexpected crash of the website that the team was developing. The diagram given is an example of a fishbone diagram or a cause-and-effect diagram that shows the possible causes of a problem or effect. The diagram has four main categories: people, process, technology, and environment. Each category has subcategories that list specific factors that may contribute to the problem or effect. The diagram shows that incorrect configuration under technology was marked as an initial cause of website crash.

NEW QUESTION # 371

A project manager is receiving reports of the actual project expenditures and, based on this information, is making adjustments to the budget. In which of the following phases does this occur?

- A. Planning
- B. Initiation
- C. Execution
- D. Closure

Answer: C

Explanation:

The execution phase is when the project manager and the team execute the project plan, deliver the project outputs, and monitor and control the project performance. This includes tracking and managing the project budget, scope, schedule, quality, and risks. Making adjustments to the budget based on the actual project expenditures is part of the monitoring and controlling process in the execution phase. Reference = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 10: Executing and Closing Projects, p. 263.

NEW QUESTION # 372

A project team needs a tool to store information that is captured throughout the life cycle of a project. The information should be stored in a centralized location that is easily accessible to all stakeholders and will provide search functionality. Which of the following tools should be used?

- A. Wiki knowledge base
- B. Digital whiteboard
- C. Real-time, multiauthoring editing software
- D. Secure folder

Answer: A

Explanation:

A wiki knowledge base is a tool that allows the project team to store, organize, and share information that is captured throughout the life cycle of a project. A wiki knowledge base is stored in a centralized location that is easily accessible to all stakeholders via a web browser. A wiki knowledge base also provides search functionality that enables the users to find the information they need quickly and easily. A wiki knowledge base can help the project team to document the project requirements, scope, schedule, budget, quality, risks, issues, lessons learned, and best practices.

A wiki knowledge base is different from a secure folder, which is a tool that protects the files and folders from unauthorized access or modification. A secure folder may not be easily accessible to all stakeholders, and may not provide search functionality or collaboration features. A wiki knowledge base is also different from a real-time, multiauthoring editing software, which is a tool that allows the project team to create and edit documents simultaneously and synchronously. A real-time, multiauthoring editing software may not be suitable for storing large amounts of information, and may not provide the same level of organization and structure as a wiki knowledge base. A wiki knowledge base is also different from a digital whiteboard, which is a tool that allows the project team to brainstorm, visualize, and communicate ideas. A digital whiteboard is not designed for storing information, and may not provide the same level of search functionality or security as a wiki knowledge base.
