CompTIA Project+ Certification Exam Sample Questions (Q278-Q283):

NEW QUESTION # 278

A PM is working with stakeholders in the discovery phase and comparing the cost of the project to the cost savings the project will produce when it is complete. The output of this exercise will produce the:

- A. RPR
- B. RFI
- **C. ROI.**
- D. SOW.

Answer: C

Explanation:

The output of this exercise where the project manager is comparing the cost of the project to the cost savings the project will produce when it is complete will produce the return on investment (ROI). ROI is a financial metric that measures the profitability or efficiency of an investment by comparing its benefits or returns to its costs. ROI can help to evaluate the value or worth of a project and support decision making and prioritization. ROI is calculated by dividing the net benefits (benefits minus costs) by the total costs and multiplying by 100 to get a percentage.

NEW QUESTION # 279

A project manager provided details regarding the completion of the following tasks:

Vendor selection took less time than planned.

Equipment procurement took less time than estimated.

Equipment installation went according to schedule.

Which of the following should the project manager update?

- A. Change log
- B. Issue log
- C. Requirements traceability matrix
- **D. Project Gantt**

Answer: D

Explanation:

The Project Gantt chart is a scheduling tool used to track task progress and timelines. When tasks are completed ahead of schedule, updating the Gantt chart ensures accurate tracking. This aligns with CompTIA Project+ recommendations on project scheduling and monitoring.

NEW QUESTION # 280

During a brainstorming meeting, a project manager identifies multiple techniques that will help the project team ensure confidence and alignment with the project scope and goals. Which of the following plans is the project manager creating?

- A. Risk
- B. Communication
- **C. Quality assurance**
- D. Procurement

Answer: C

Explanation:

The project manager is creating a quality assurance plan when identifying multiple techniques that will help the project team ensure confidence and alignment with the project scope and goals during a brainstorming meeting. A quality assurance plan is a plan that defines and documents the standards, criteria, methods, activities, and tools for ensuring and verifying that the quality requirements and expectations of a project are met. A quality assurance plan can help to improve the quality of the project processes and deliverables and prevent or reduce defects or errors.

NEW QUESTION # 281

The project team determines that software installation can only begin after the desktops have been installed and can be powered on. Which of the following dependencies does this represent?

- A. External
- B. Discretionary
- **C. Mandatory**
- D. Internal

Answer: C

Explanation:

The dependency between software installation and desktop installation is a mandatory dependency. A mandatory dependency is a type of dependency that is inherent in the nature or logic of the work and cannot be avoided or changed. It is also known as a hard dependency or a hard logic dependency. A mandatory dependency means that one task must be completed before another task can start or finish. For example, software installation can only start after desktop installation is finished. The dependency between desktop installation and software installation represents a mandatory dependency. A mandatory dependency is a type of task dependency that is inherent in the nature of the work being performed.

In this case, software installation cannot begin until desktops are installed and powered on, and therefore, the dependency is mandatory. NEW QUESTION # 282

Which of the following offers administrators more direct control over operating systems?

- **A. Infrastructure as a service**
- B. Functions as a service
- C. Software as a service
- D. Platform as a service

Answer: A

Explanation:

Explanation

Infrastructure as a service (IaaS) offers administrators more direct control over operating systems than other cloud service models. IaaS is a type of cloud computing service that provides virtualized computing resources such as servers, storage, network, and operating systems over the internet. IaaS allows users to rent or lease infrastructure resources on demand and pay only for what they use. IaaS gives users more flexibility and control over their infrastructure resources and enables them to configure, manage, and customize their operating systems according to their needs and preferences.

NEW QUESTION # 283

.....
