Fortinet EMEA Advanced Support Exam Sample Questions (Q29-Q34):

NEW QUESTION # 29

Which of these BGP paths will be the preferred one ?

- A. Prefer External path (learned via EBGp) over Internal path (IBGP)
- B. Prefer the path with the highest Local Preference value
- C. Prefer the path with the shortest AS Path
- D. Prefer the path with the lowest Multi-Exit Discriminator (MED)

Answer: B

Explanation:

BGP path selection follows a specific order of attributes to determine the best path. The process prefers the path with the highest local preference first, as it is one of the earliest steps in the decision process. Local preference is used within an AS to influence outbound traffic. Only if local preferences are equal does it move to the next criteria, such as shortest AS path. The AS path length is considered after local preference, MED after that, and eBGP over iBGP even later. Therefore, among the options, the highest local preference (D) is the most preferred criterion. The original document's answer B is incorrect based on standard BGP selection rules implemented in Fortinet. Exact extract: This article describes the BGP route selection process. Scope FortiGate. Solution Consider only routes with no AS loops and a valid next hop. BGP makes routing decisions based on path, network policies and rulesets ... select the route with the lowest router ID as the best path. Network. Type. To achieve this, multiple route selection techniques can be used. Some are protocol- agnostic (for example, weight) and others are protocol-specific (for example ...).

NEW QUESTION # 30

In FortiGate, what is the purpose of a Virtual IP (VIP)?

- A. To create a virtual interface for VLANs
- B. To assign a secondary IP to a physical interface
- C. To enable load balancing for VPN tunnels
- **D. To map an external IP to an internal IP for NAT**

Answer: D

Explanation:

A Virtual IP (VIP) in FortiGate maps an external IP address to an internal IP for Destination NAT (DNAT), commonly used for accessing internal servers from external networks. It is not for VLANs (B), secondary IPs (C), or VPN load balancing (D). Exact extract: "Virtual IPs (VIPs) are used for Destination NAT, mapping an external IP address to an internal IP to allow external access to internal resources, such as servers."

NEW QUESTION # 31

What happens when a FortiGate's CPU enters conserve mode?

- A. Routing protocols are disabled
- B. All traffic is blocked
- C. New sessions are dropped
- **D. Proxy-based inspection is disabled**

Answer: D

Explanation:

When a FortiGate's CPU enters conserve mode due to high load, proxy-based inspection (e.g., web filtering, DLP) is disabled to reduce resource usage, while flow-based inspection continues. Traffic isn't fully blocked (A), new sessions may still be processed (C), and routing protocols (D) are unaffected. Exact extract: "In conserve mode, FortiGate disables proxy-based inspection to reduce CPU and memory load, switching to flow-based inspection to maintain performance."

NEW QUESTION # 32

In VMware vSphere, the term VMotion refers to

- A. The streaming of high definition video on a virtual machine
- **B. A zero downtime live migration of workloads from one server to another**
- C. The process used to describe the movement of hard drive platters on a virtual machine
- D. The patented technology available to migrate a server from Hyper-V to VMware

Answer: B

Explanation:

VMotion in VMware vSphere enables live migration of running virtual machines from one physical server to another with zero downtime, ensuring continuous operation. Fortinet's FortiGate-VM supports such environments. Options A, C, and D are incorrect

as they do not describe VMotion; C refers to a different migration scenario, and D is unrelated to virtualization. Exact extract: "VMotion allows the live migration of a running virtual machine from one physical server to another with no downtime... This ensures workloads continue running during server maintenance or load balancing."

NEW QUESTION # 33

Which statement is true about IPsec VPNs and SSL VPNs?

- A. Either a SSL VPN or an IPsec VPN can be established between an end-user workstation and a FortiGate device
- B. Both SSL VPNs and IPsec VPNs are standard protocols
- **C. All of the above**
- D. SSL VPN creates a HTTPS connection. IPsec does not

Answer: C

Explanation:

Both SSL VPN and IPsec VPN are standard protocols supported by FortiGate devices for secure remote access. SSL VPN typically uses HTTPS (TCP port 443) for encrypted communication, while IPsec uses protocols like IKE and ESP. Both can be configured between an end-user workstation (e.g., via FortiClient) and a FortiGate device, supporting various authentication methods. All options are correct, making D the correct answer. Exact extract: "SSL VPN technology uses the standard SSL/TLS protocol to provide a secure connection to the FortiGate unit. The FortiGate SSL VPN can be configured to use HTTPS..." and "IPsec VPNs use standardized protocols like IKE and ESP to create secure tunnels... FortiClient supports both IPsec and SSL VPN connections to FortiGate devices for remote access."
