Passing the test CTFL-AcT Certification can make them become that kind of people and if you are one of them buying our CTFL-AcT study materials will help you pass the CTFL-AcT test smoothly with few efforts needed.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which of the following techniques is most likely applied to ensure the quality of acceptance testing activities?

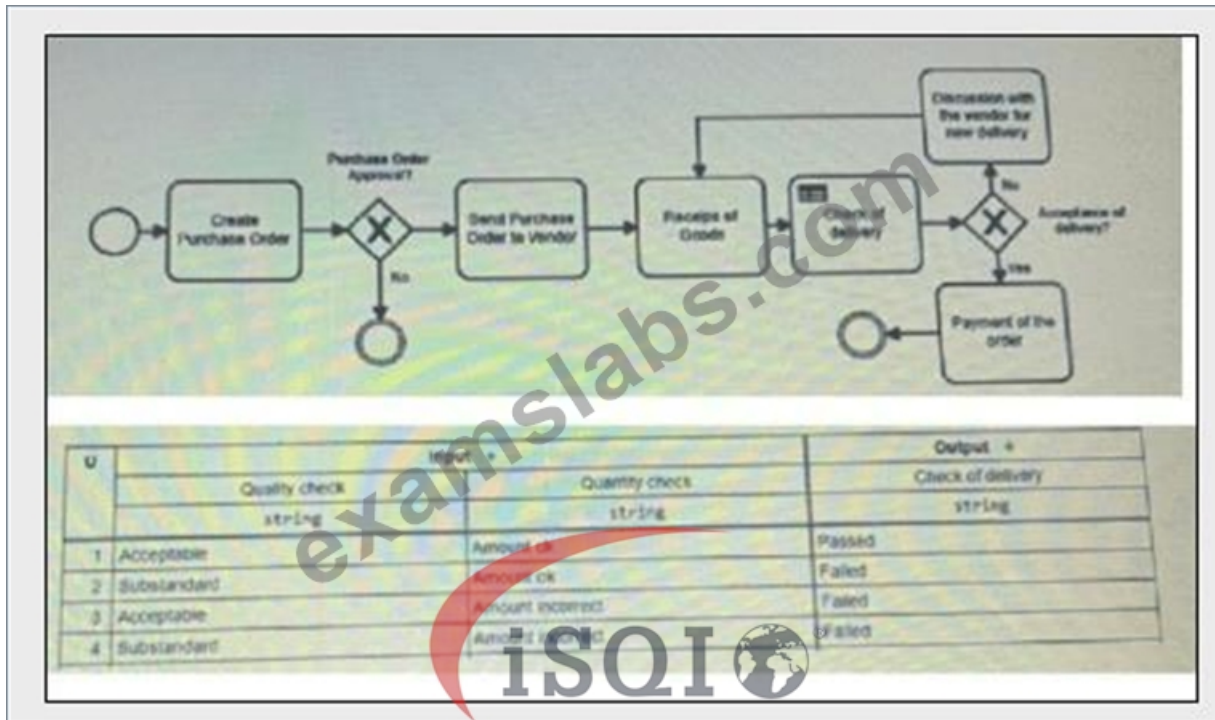

- A. Eye tracking to verify the feasibility of previously defined user acceptance tests.
- **B. Verification of the traceability between user stories and test cases to make sure it is up to date.**
- C. Review of the source code to ensure traceability of user stories to system components.
- D. Checklist-based verification of requirements to ensure their completeness and quality.

Answer: B

NEW QUESTION # 61

Consider the following BPMN model and the related DMN model describing the decision rules associated to the "Check of

delivery" activity What is the minimum number of test cases required to cover all paths without repeated loops in the BPMN model AND all decisions in the DMN table?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

To determine the minimum number of test cases needed to cover:
 All unique paths (without repeating loops) in the BPMN process model.
 All decision rules (combinations) in the DMN decision table.

Let's break it down:

BPMN Paths:

If the purchase order is not approved # process ends # 1 path

If approved:

Goods received # "Check of delivery" # Acceptance YES # Payment # 1 path
 Goods received # "Check of delivery" # Acceptance NO # Discussion # End # 1 path

= Total distinct BPMN paths: 3

DMN Table:

There are 4 rules based on two inputs (Quality check and Quantity check):

Acceptable + Amount ok # Passed

Substandard + Amount ok # Failed

Acceptable + Amount incorrect # Failed

Substandard + Amount incorrect # Failed

You must execute 4 combinations to cover all decision rules.

To cover both all BPMN flows and all DMN rules, you need a minimum of 4 test cases (each using a different rule from the DMN table and associated BPMN path). Paths may overlap, but all rules must be exercised.

NEW QUESTION # 62

Which one of the following statements about the relation between business goals, business needs and requirements is true?

- A. Business goals can be extracted from product requirements
- B. Once the business requirements are elicited, business analysts start to formalize business goals for the project.
- C. Business requirements are generally developed by refining product requirements.

- **D. Business goals, business needs and requirements describe, at different levels of abstraction, what shall be archived**

Answer: D

Explanation:

The relationship between business goals, business needs, and requirements is hierarchical and reflects increasing levels of specificity:

Business Goals: High-level strategic objectives.

Business Needs: Problems or opportunities that must be addressed to achieve those goals.

Requirements: Specific capabilities or conditions the system must satisfy to meet the needs.

Option B is correct because it accurately describes how these elements relate at different abstraction levels in the requirements hierarchy. This relationship is fundamental to business analysis and accepted by standards like BABOK and ISTQB.

Other options:

A is reversed - business goals usually precede and drive the elicitation of requirements.

C and D misrepresent the sequence - product requirements are derived from business goals and needs, not the other way around.

B). Business goals, business needs and requirements describe, at different levels of abstraction, what shall be achieved

NEW QUESTION # 63

Which tool fits the mentioned acceptance test activities BEST?

- A. Model-based testing tools for managing incidents.
- B. Requirements management tools for managing acceptance test execution campaigns.
- C. Test management and automation tools for business process model-based acceptance test generation.
- **D. Business process management tools for modeling business processes and rules.**

Answer: D

NEW QUESTION # 64

Which tool fits the mentioned acceptance test activities BEST?

- A. Model-based testing tools for managing incidents.
- B. Requirements management tools for managing acceptance test execution campaigns.
- C. Test management and automation tools for business process model-based acceptance test generation.
- **D. Business process management tools for modeling business processes and rules.**

Answer: D

Explanation:

Acceptance testing often relies on understanding and validating business processes and business rules. These are typically visualized and documented using business process modeling techniques such as BPMN (Business Process Model and Notation) and decision tables (DMN - Decision Model and Notation).

Business Process Management (BPM) tools are specifically designed for modeling and managing such workflows and rules. These tools are commonly used during acceptance test design to align tests with business objectives and processes.

Option C is correct because it directly aligns with the use of business process modeling in acceptance testing activities.

Other options:

A is incorrect because requirements management tools are more focused on requirement traceability and prioritization, not managing test execution campaigns.

B confuses roles - test management/automation tools can assist with test generation, but "business process model-based" generation is more accurately linked to BPM or model-based testing tools.

D is incorrect - model-based testing tools are used for test case generation, not incident management.

C). Business process management tools for modeling business processes and rules.

NEW QUESTION # 65

.....

A ISQI CTFL-AcT practice questions is a helpful, proven strategy to crack the ISQI CTFL-AcT exam successfully. It helps candidates to know their weaknesses and overall performance. ExamsLabs software has hundreds of ISQI exam dumps that are useful to practice in real time. The ISTQB Foundation Level - Acceptance Testing (CTFL-AcT) practice questions have a close resemblance with the actual CTFL-AcT exam.
