## torrent

Our product boasts many merits and functions. You can download and try out our CRT-450 test question freely before the purchase. You can use our product immediately after you buy our product. We provide 3 versions for you to choose and you only need 20-30 hours to learn our CRT-450 training materials and prepare the exam. The passing rate and the hit rate are both high. The purchase procedures are safe and we protect our client's privacy. We provide 24-hours online customer service and free update within one year. If you fail in the exam, we will refund you immediately. All in all, there are many advantages of our CRT-450 Training Materials.

## Salesforce Certified Platform Developer I Sample Questions (Q55-Q60):

### NEW QUESTION # 55

An Apex transaction inserts 100 Account records and 2,000 Contact records before encountering a DML exception when attempting to insert 500 Opportunity records. The Account records are inserted by calling the `database.insert()` method with the `allOrNone` argument set to `false`. The Contact and Opportunity records are inserted using the standalone insert statement. How many total records will be committed to the database in this transaction?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

### NEW QUESTION # 56

A developer wants to display all of the picklist entries for the Opportunity StageName field and all of the available record types for the Opportunity object on a Visualforce page.

Which two actions should the developer perform to get the available picklist values and record types in the controller? (Choose two.)

- A. Use `Schema.PicklistEntry` returned by `Opportunity.StageName.getDescribe().getPicklistValues()`.
- B. Use `Schema.RecordTypeInfo` returned by `Opportunity.SObjectType.getDescribe().getRecordTypeInfos()`.
- C. Use `Schema.PicklistEntry` returned by `Opportunity.SObjectType.getDescribe().getPicklistValues()`.
- D. Use `Schema.RecordTypeInfo` returned by `RecordType.SObjectType.getDescribe().getRecordTypeInfos()`.

**Answer: B,C**

Explanation:

Explanation

### NEW QUESTION # 57

A developer needs to test an Invoicing system integration. After reviewing the number of transactions required for the test, the developer estimates that the test data will total about 2 GB of data storage. Production data is not required for the integration testing. Which two environments meet the requirements for testing? (Choose two.)

- A. Developer Sandbox
- B. Developer Pro Sandbox
- C. Partial Sandbox
- D. Developer Edition
- E. Full Sandbox

**Answer: C,E**

### NEW QUESTION # 58

What should a developer do to check the code coverage of a class after running all tests?

- A. View the Class Test Percentage tab on the Apex Class first view in Salesforce Setup.

- **B. View Use code coverage percentage for the class using the Overall Code Coverage panel in the Developer Console Tests tab.**
- C. View the Code Coverage column in the list view on the Apex Classes page.
- D. Select and run the class on the Apex Test Execution page in the Developer Console.

**Answer: B**

Explanation:

To check the code coverage of a class after running all tests, the developer should view the code coverage percentage for the class using the Overall Code Coverage panel in the Developer Console Tests tab. This panel shows the code coverage for each class and trigger in the org, as well as the overall code coverage percentage.

The developer can also double-click on a class or trigger name to see the code coverage details, such as which lines are covered or not covered by tests.

The other options are not correct because:

\* A. View the Code Coverage column in the list view on the Apex Classes page. This option only shows the code coverage percentage for each class, but not the details of which lines are covered or not covered by tests. It also does not show the code coverage for triggers or the overall code coverage percentage.

\* B. View the Class Test Percentage tab on the Apex Class list view in Salesforce Setup. This option does not exist in Salesforce Setup. There is no such tab or view for Apex classes.

\* D. Select and run the class on the Apex Test Execution page in the Developer Console. This option only runs the test methods in the selected class, but does not show the code coverage for the class or other classes and triggers in the org.

References:

\* : Testing and Code Coverage

\* : Developer Console

#### NEW QUESTION # 59

As part of new feature development, a developer is asked to build a responsive application capable of responding to touch events, that will be executed on stateful clients.

Which two technologies are built on a framework that fully supports the business requirement?

Choose 2 answers

- A. Visualforce Components
- **B. Lightning Web Components**
- **C. Aura Components**
- D. Visualforce Pages

**Answer: B,C**

Explanation:

To build a responsive application capable of responding to touch events and executed on stateful clients, the developer should use technologies that support modern web standards, responsive design, and touch interactions. The two technologies that meet these requirements are Aura Components and Lightning Web Components.

Option A: Aura Components

Reference:

"The Aura Components programming model is designed to support developing responsive applications for mobile and desktop devices."

- Lightning Aura Components Developer Guide

Option C: Lightning Web Components

"Lightning web components are custom HTML elements built using HTML and modern JavaScript."

"Because Lightning web components are based on web standards, they are inherently efficient and deliver exceptional performance."

- Lightning Web Components Developer Guide

Why Other Options Are Incorrect:

Option B: Visualforce Pages

Visualforce is a server-side framework that doesn't fully support responsive design or touch events natively. While you can make Visualforce pages responsive using custom code, it doesn't provide built-in support for touch events as effectively as Aura Components or LWC.

"Visualforce is a component-based user interface framework for the Force.com platform."

- Visualforce Developer Guide

Option D: Visualforce Components

Visualforce Components are custom components within the Visualforce framework. They inherit the same limitations as Visualforce
