## Free PDF 2026 EC-COUNCIL The Best 312-38: EC-Council Certified Network Defender CND Vce Format

Here, we provide you with 312-38 accurate questions & answers which will be occurred in the actual test. About explanations, the difficult issues will be along with detail explanations, so that you can easy to get the content of our EC-COUNCIL 312-38 pdf vce and have a basic knowledge of the key points. Besides, you can choose the 312-38 Vce Format files for simulation test. It can help you enhance your memory and consolidate the knowledge, thus the successful pass is no longer a difficult thing.

## EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q222-Q227):

### NEW QUESTION # 222

Adam works as a Professional Penetration Tester. A project has been assigned to him to test the vulnerabilities of the CISCO Router of Umbrella Inc. Adam finds out that HTTP Configuration Arbitrary Administrative Access Vulnerability exists in the router. By applying different password cracking tools, Adam gains access to the router. He analyzes the router config file and notices the following lines:

```
logging buffered errors
logging history critical
logging trap warnings
logging 10.0.1.103
```

By analyzing the above lines, Adam concludes that this router is logging at log level 4 to the syslog server 10.0.1.103. He decides to change the log level from 4 to 0.

Which of the following is the most likely reason of changing the log level?

- A. By changing the log level, Adam can easily perform a SQL injection attack.
- B. Changing the log level from 4 to 0 will result in the termination of logging. This way the modification in the router is not sent to the syslog server.
- C. Changing the log level from 4 to 0 will result in the logging of only emergencies. This way the modification in the router is not sent to the syslog server.
- D. Changing the log level grants access to the router as an Administrator.

**Answer: C**

Explanation:

The Router Log Level directive is used by the sys log server to specify the level of severity of the log. This directive is used to control the types of errors that are sent to the error log by constraining the severity level.

Eight different levels are present in the Log Level directive, which are shown below in order of their descending significance:

Number Level Description

0emergEmergencies - system is unusable

1alertAction must be taken immediately

2critCritical Conditions

3errorError conditions

4warnWarning conditions

5notice Normal but significant condition

6infoInformational

7debug Debug-level messages

Note: When a certain level is specified, the messages from all other levels of higher significance will also be reported. For example, when Log Level crit is specified, then messages with log levels of alert and emerg will also be reported.

### NEW QUESTION # 223

Which of the following helps in viewing account activity and events for supported services made by AWS?

- A. AWS CloudFormation
- B. AWS CloudHSM
- C. AWS CloudTrail
- D. AWS Certificate Manager

**Answer: C**

### NEW QUESTION # 224

Which of the following types of information can be obtained through network sniffing? (Choose all that apply.)

- A. Programming errors
- B. Telnet passwords
- C. DNS traffic
- D. Syslog traffic

**Answer: B,C,D**

Explanation:

Network sniffing is a process used to monitor and capture data packets as they travel across a network. Through network sniffing, various types of information can be obtained:

DNS traffic: Sniffing can capture the queries and responses exchanged between DNS servers and clients, revealing which domains are being requested by users on the network. Telnet passwords: Since Telnet transmits data, including login credentials, in clear text, sniffing can easily capture these passwords as they traverse the network.

Syslog traffic: Syslog is a standard for message logging, and sniffing can intercept this traffic, providing insights into the events and statuses reported by network devices. Programming errors, however, are typically not something that can be captured through network sniffing, as they are related to the code's logic rather than the data transmitted over the network.

#### NEW QUESTION # 225

A war dialer is a tool that is used to scan thousands of telephone numbers to detect vulnerable modems. It provides an attacker unauthorized access to a computer. Which of the following tools can an attacker use to perform war dialing? Each correct answer represents a complete solution.

Choose all that apply.

- A. ToneLoc
- B. NetStumbler
- C. Wingate
- D. THC-Scan

**Answer: A,D**

#### NEW QUESTION # 226

Jason has set a firewall policy that allows only a specific list of network services and deny everything else.

This strategy is known as a \_\_\_\_\_.

- A. Default access
- B. Default deny
- C. Default restrict
- D. Default allow

**Answer: B**

#### NEW QUESTION # 227

.....

EC-COUNCIL 312-38 pdf dumps format contains actual 312-38 exam questions. With EC-COUNCIL 312-38 pdf questions you don't have to spend a lot of time on EC-Council Certified Network Defender CND Networking Solutions 312-38 exam preparation. You just go through and memorize these real 312-38 exam questions. PassCollection has designed this set of valid EC-COUNCIL Exam Questions with the assistance of highly qualified professionals. Preparing with these 312-38 Exam Questions is enough to get success on the first try. However, this format of PassCollection 312-38 exam preparation material is best for those who are too much busy in their life and don't have enough time to prepare for EC-COUNCIL 312-38 exam.
