您應該尋找那些真實可信的題庫商提供的AD0-E725題庫資料，這樣對您通過考試是更有利，可信度高的Adobe AD0-E725題庫可幫助您快速通過認證考試，而NewDumps公司就是這樣值得您信賴的選擇。AD0-E725題庫資料中的每個問題都由我們專業人員檢查審核，為考生提供最高品質的考古題。如果您希望在短時間內獲得Adobe AD0-E725認證，您將永遠找不到比NewDumps更好的產品了。

Adobe AD0-E725 考試大綱:

主題	簡介
主題 1	<ul style="list-style-type: none">Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.

主題 2	<ul style="list-style-type: none"> • Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.
主題 3	<ul style="list-style-type: none"> • External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I • O events and webhooks to create automated and connected business processes.
主題 4	<ul style="list-style-type: none"> • Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.

最新的 Adobe Commerce AD0-E725 免費考試真題 (Q18-Q23):

問題 #18

A Developer is notified that custom API results are not cached, which is causing additional delays.

What are two potential causes for this behavior? (Choose two.)

- A. The request is using HTTP PUT.
- B. The request is using HTTP GET.
- C. The request is using HTTP POST.
- D. The request is using HTTP HEAD.

答案: A,C

解題說明:

Adobe Commerce API caching (including GraphQL and REST) works only for idempotent requests such as HTTP GET.

C (POST) and D (PUT) are not cacheable because they are used for creating or updating resources.

A (GET) is cacheable.

B (HEAD) is technically idempotent, but not commonly used in Adobe Commerce APIs.

Reference:

Adobe Commerce DevDocs - Web API caching

HTTP/1.1 RFC 7231 - Cacheable methods

問題 #19

An Adobe Commerce Developer is tasked with adding additional data to an order entity in REST API.

Remembering upgradability, which solution should the developer implement?

- A. Use extension attributes.
- B. Use interceptor plugins.
- C. Use API events.

答案: A

問題 #20

A Developer needs to set up a message queue topic in Adobe Commerce to asynchronously handle order processing.

Which XML file should the Developer use to configure this?

- A. queue_topology.xml
- B. queue_consumer.xml
- C. communication.xml

答案： C

解題說明：

The communication.xml file is used to define message queue topics and link publishers with subscribers. This is required when setting up asynchronous handling for events such as order processing.

B (queue_topology.xml): Defines queue and exchange structure.

C (queue_consumer.xml): Defines consumers for queues but does not declare topics.

A is correct: communication.xml is the right file for defining topics.

Reference:

Adobe Commerce DevDocs - communication.xml reference

In Adobe Commerce's Message Queue Framework (MQF), several XML configuration files are used, each with a specific purpose:

communication.xml # Defines message queue topics and the messages they carry.

Topics represent logical channels that connect publishers and consumers.

Example: An order placement event may publish a message to a topic like order.processing.

queue_topology.xml # Defines the relationship between topics and queues.

Maps a topic to one or more queues.

Specifies routing and exchange bindings.

queue_consumer.xml # Defines consumers that process messages from queues.

Each consumer is a PHP class responsible for handling a message pulled from a queue.

Since the question specifically asks about setting up a topic (not the routing or consumer), the correct configuration file is communication.xml.

Official Documentation Extracts:

"The communication.xml file defines the messages and topics in the message queue framework."- Adobe Commerce DevDocs: Message queues configuration

"Use queue_topology.xml to bind topics to queues and define exchanges."- Message Queues: Topology configuration

"Consumers are defined in queue_consumer.xml. A consumer listens to a queue and processes incoming messages."- Message Queues: Consumer configuration

問題 #21

A client uses a straightforward custom payment method which allows a pregenerated code to be used as payment. The code is provided directly to customers through email and other communications. The client reports a problem with someone fraudulently guessing the codes correctly. They want to implement an API check that ensures the code exists in their system when the code is applied.

Where should the Developer add this change?

- A. Create a before plugin on the canCapture method and implement the API check there.
- B. Create an after plugin on the canAuthorize method and implement the API check there.
- C. Create a custom validator that will check for this code at the time the order is placed.

答案： C

問題 #22

A new critical security vulnerability is found on Adobe Commerce Cloud. The successful exploitation may lead to arbitrary code execution, so the Developer must apply a security patch file given by Adobe as soon as possible to ensure system security.

How should the Developer apply the security patch on Adobe Commerce hosted on cloud infrastructure according to best practices?

- A. Apply a security patch using composer.json.
- B. Copy a security patch to m2-hotfixes directory.
- C. Upgrade Adobe Commerce to the latest security patch release.

答案： B

解題說明：

On Adobe Commerce Cloud, the best practice for urgent fixes is to place the patch file into the m2-hotfixes directory at the root of the project. Patches in this directory are automatically applied during the Cloud build and deploy process.

Option A (composer.json) applies to composer-based patches in on-premise installations, not the recommended cloud approach.

Option C (upgrade to latest release) is ideal for long-term but not feasible for urgent fixes that must be applied immediately.
