

F5CAB3 Valid Exam Camp Pdf - F5CAB3 New Braindumps

Highlight a person's learning effect is not enough, because it is difficult to grasp the difficulty of testing, a person cannot be effective information feedback, in order to solve this problem, our F5CAB3 real exam materials provide a powerful platform for users, allow users to exchange of experience. Here, the all users of our F5CAB3 learning reference files can through own id to login to the platform, realize the exchange and sharing with other users, even on the platform and more users to become good friends, encourage each other, to deal with the difficulties encountered in the process of preparation each other. Our F5CAB3 learning reference files not only provide a single learning environment for users, but also create a learning atmosphere like home, where you can learn and communicate easily.

F5 F5CAB3 Exam Overview:

Certification Vendor:	F5 Networks
Exam Name:	BIG-IP Administration Data Plane Configuration
Exam Number:	F5CAB3
Available Languages:	English
Passing Score:	245
Certificate Validity Period:	3 years
Exam Duration:	30 minutes
Real Exam Qty:	30
Related Certifications:	BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1)
	BIG-IP Administration Data Plane Concepts (F5CAB2)
	BIG-IP Administration Control Plane Administration (F5CAB4)
	BIG-IP Administration Support and Troubleshooting (F5CAB5)
Exam Format:	Multiple Choice, Scenario-based
Exam Price:	USD 50 (Online), USD 65 (Test Center)
Recommended Training:	F5 Certified Administrator BIG-IP Blueprint Administering BIG-IP Training Course

Exam Registration:	Pearson VUE Certiverse F5 Education
Sample Questions:	F5 F5CAB3 Sample Questions
Exam Way:	Online proctored (Certiverse) / Test center proctored (Pearson VUE)
Pre Condition:	No formal prerequisites; recommended basic understanding of BIG-IP system and networking concepts
Official Syllabus URL:	https://education.f5.com/certification/big-ip-administration-data-plane-configuration-f5cab3

2026 F5CAB3 Valid Exam Camp Pdf | Updated 100% Free F5CAB3 New Braindumps

In order to help customers solve problems, our company always insist on putting them first and providing valued service. We deeply believe that our F5CAB3 question torrent will help you pass the exam and get your certification successfully in a short time. Maybe you cannot wait to understand our F5CAB3 Guide questions; we can promise that our products have a higher quality when compared with other study materials. At the moment I am willing to show our F5CAB3 guide torrents to you, and I can make a bet that you will be fond of our products if you understand it.

F5 F5CAB3 Exam Syllabus Topics:

Topic	Details
Topic 1	Apply procedural concepts required to modify and manage virtual servers: This domain covers managing virtual servers including applying persistence, encryption, and protocol profiles, identifying iApp objects, reporting iRules, and showing pool configurations.
Topic 2	Apply procedural concepts required to modify and manage pools: This domain addresses managing server pools including health monitors, load balancing methods, priority groups, and service port configurations.

F5 BIG-IP Administration Data Plane Configuration Sample Questions (Q73-Q78):

NEW QUESTION # 73

Due to a change in application requirements, a BIG-IP Administrator needs to modify the configuration of a Virtual Server to include a Fallback Persistence Profile.

Which persistence profile type should the BIG-IP Administrator use?

- **A. Source Address Affinity**
- B. Universal
- C. SSL
- D. Hash

Answer: A

Explanation:

Fallback persistence is used when the primary persistence method fails. Source Address Affinity is a Layer 4 persistence method and is fully supported as a fallback option for most virtual server types.

NEW QUESTION # 74

A BIG-IP Administrator creates an HTTP Virtual Server using an iApp template. After the Virtual Server is created, the user requests to change the destination IP addresses. The BIG-IP Administrator tries to change the destination IP address from 10.1.1.1 to 10.2.1.1 in Virtual Server settings, but receives the following error:

"The application service must be updated using an application management interface." What is causing this error?

- A. The IP addresses are already in use.
- **B. The Application Services have Strict Updates enabled.**
- C. The IP addresses used are NOT from the same subnet as the Self IP.
- D. The Application Service was NOT deleted before making the IP address change.

Answer: B

Explanation:

In F5 BIG-IP administration, iApps are designed to manage complex application configurations as a single unit. When an iApp is deployed, it creates an "Application Service" object that owns all the associated LTM objects, such as Virtual Servers, Pools, and Nodes. By default, these iApps are created with Strict Updates enabled. Strict Updates is a safety mechanism that prevents administrators from making manual "out-of-band" changes to the individual objects created by the iApp. The system enforces this because manual changes would be overwritten the next time the iApp template is updated or re-entered.

When the administrator attempts to change the destination IP address directly on the Virtual Server object, the BIG-IP system checks the "Strict Updates" flag. If it is set to "Enabled," the system blocks the modification and generates the error message stating the service must be updated via the application management interface.

To resolve this, the administrator must navigate to the iApp >> Application Services menu, select the specific application service, and go to the "Reconfigure" tab. Within the iApp configuration form, the destination IP can be safely changed. Alternatively, if the administrator specifically wants to manage the objects manually and forgo the benefits of the iApp template management, they could disable "Strict Updates" in the iApp properties, though this is generally discouraged as it breaks the template's logic. The error is not related to subnetting or duplicate IPs, but strictly to the configuration authority assigned to the iApp service.

NEW QUESTION # 75

Which type of Virtual Server requires the use of a FastL4 profile?

- A. Stateless
- **B. Performance (Layer 4)**
- C. Standard
- D. Performance (HTTP)

Answer: B

Explanation:

Performance (Layer 4) virtual servers rely on FastL4 profiles to provide high-speed L4 processing without full proxy overhead.

Below is BATCH 2 (next 10 questions) extracted only from your uploaded document that are clearly related to BIG-IP

Administration: Data Plane Configuration topics.

☐ As requested, I have strictly excluded questions related to:

Licensing

HA / Device Trust / Sync-only

Logging destinations

User roles

Hardware, EUD, support processes

System-only administration

Source: Your uploaded TMOS Administration v2.0 document

NEW QUESTION # 76

An organization reports slow performance accessing an Intranet website. All employees use a single proxy IP.

What should the BIG-IP Administrator do?

- **A. Change Default Persistence to cookie**
- B. Change Source Address to proxy IP
- C. Change Load Balancing to Least Connections
- D. Change Fallback Persistence to source_addr

Answer: A

Explanation:

When many users share one source IP, source-address persistence fails. Cookie persistence uniquely identifies clients at Layer 7.

NEW QUESTION # 77

The BIG-IP Administrator needs to load balance a pool of web servers. Load balancing should consider the number of connections that are active on that pool member.

Which load balancing method meets this requirement? (Choose one answer)

- A. Ratio (node)
- B. Ratio (member)
- C. Round Robin
- **D. Least Connections (member)**

Answer: D

Explanation:

The requirement states that load balancing decisions must be based on the number of active connections on each pool member. This directly maps to the Least Connections (member) load balancing method.

According to the BIG-IP Administration: Data Plane Configuration documentation:

Least Connections (member) selects the pool member with the fewest active connections at the time of the request.

This method dynamically adapts to real-time traffic patterns and ensures that more heavily loaded pool members receive fewer new connections.

It is especially effective for web servers where connection duration may vary and equal distribution of active sessions is desired.

Why the other options are incorrect:

B . Round Robin

Distributes connections sequentially without considering current load or active connections.

C . Ratio (member)

Distributes traffic based on static ratios, not real-time connection counts.

D . Ratio (node)

Uses predefined ratios at the node level and does not account for active connection counts.

Correct Resolution:

Using Least Connections (member) ensures that new connections are directed to the pool member currently handling the fewest active connections, meeting the stated requirement.

NEW QUESTION # 78
