

# Juniper High Pass-Rate JN0-683 Exam Preparation—Pass JN0-683 First Attempt

BTW, DOWNLOAD part of Braindumpsqa JN0-683 dumps from Cloud Storage: <https://drive.google.com/open?id=1Dp7xJFyRqshsOkQxpVQSMEEvOPFRDaha>

Our JN0-683 test guide is test-oriented, which makes the preparation become highly efficient. Once you purchase our JN0-683 exam material, your time and energy will reach a maximum utilization. Thus at that time, you would not need to be afraid of the society and peer pressure with JN0-683 Certification. In conclusion, a career enables you to live a fuller and safer life. So if you want to take an upper hand and get a well-pleasing career our JN0-683 learning question would be your best friend.

Preparation for the professional Data Center, Professional (JNCIP-DC) (JN0-683) exam is no more difficult because experts have introduced the preparatory products. With Braindumpsqa products, you can pass the Data Center, Professional (JNCIP-DC) (JN0-683) exam on the first attempt. If you want a promotion or leave your current job, you should consider achieving a professional certification like Data Center, Professional (JNCIP-DC) (JN0-683) exam. You will need to pass the Juniper JN0-683 exam to achieve the Data Center, Professional (JNCIP-DC) (JN0-683) certification.

## Get Help From Top Braindumpsqa JN0-683 Exam Practice Questions

If you are ready to prepare test you can combine our JN0-683 valid exam guide materials with your own studying. You can use our latest valid products carefully for practice so that you can save a lot of time and energy for preparation. If you master our JN0-683 Valid Exam Guide materials Juniper JN0-683 will be not too difficult actually. If you broaden train of thoughts based on our products, you will improve yourself for your test.

## Juniper Data Center, Professional (JNCIP-DC) Sample Questions (Q26-Q31):

### NEW QUESTION # 26

Host A is connected to vlan 100 on leaf. Host B is connected to vlan 200 on leaf1. Host A and Host B are unable to communicate. You have reviewed the routing and your hosts have the correct default route (.1) Referring to the exhibit, which two commands will solve the problem? (Choose two.)

- A. set vlans vn100 13-interface irb.100
- B. set routing-options static route 0.0.0.0/0 next-hop 192.168.200.10
- C. set interfaces irb unit 100 family inet address 192.168.100.1
- D. delete vlans vn200 13-interface irb.200

**Answer: A,B**

Explanation:

VLAN 100 (BLUE) does not have an IRB interface configured, meaning there is no Layer 3 gateway for hosts in VLAN 100. Adding an IRB.100 interface with an IP address will allow routing between VLAN 100 and VLAN 200. Even after configuring the IRB interface for VLAN 100, you need to bind it to VLAN 100 so that the switch correctly associates VLAN 100 traffic with the IRB. This ensures that the VLAN can route traffic through the correct Layer 3 gateway.

#### NEW QUESTION # 27

You want to provide a DCI that keeps each data center routing domain isolated, while also supporting translation of VNIs. Which DCI scheme allows these features?

- A. over the top (OTT) with VNI translation enabled
- B. MPLS DCI label exchange
- C. VXLAN stitching
- D. over the top (OTT) with proxy gateways

**Answer: A**

Explanation:

over the top (OTT) with VNI translation enabled: An OTT (Over-the-Top) architecture with VNI translation allows you to keep each data center's routing domain isolated while enabling translation of VXLAN Network Identifiers (VNIs) between the data centers. This approach supports multi-tenancy and facilitates communication between isolated data centers by mapping VNIs between them.

#### NEW QUESTION # 28

You are asked to deploy 100 QFX Series devices using ZTP. Each OFX5120 requires a different configuration. In this scenario, what are two components that you would configure on the DHCP server? (Choose two.)

- A. the MAC address of the FTP server
- B. the IP address of the FTP server
- C. the MAC address for each OFX5120
- D. the management IP address for each OFX5120

**Answer: C,D**

#### NEW QUESTION # 29

Exhibit.

Referring to the exhibit, when Host A sends an ARP request for Host B's IP address, which Junos feature does leaf1 require to send an ARP response back to Host A without having to send a broadcast frame over the fabric?

- A. GARP
- B. DAD
- C. proxy ARP
- D. proxy NDP

**Answer: C**

Explanation:

\* Scenario Overview:

\* In the exhibit, Host A is trying to resolve Host B's IP address (10.10.1.2) through ARP (Address Resolution Protocol). Normally, an ARP request would be broadcasted over the network, and the host owning the IP address (Host B) would respond.

\* Role of Proxy ARP:

\* Option A: Proxy ARP allows a router or switch (in this case, leaf1) to respond to ARP requests on behalf of another host. Leaf1, knowing the MAC address of Host B through the EVPN MAC advertisement, can reply to Host A's ARP request directly without broadcasting the request across the entire network fabric. This feature reduces unnecessary traffic and increases network efficiency.

Conclusion:

\* Option A: Correct-Proxy ARP enables leaf1 to respond to Host A's ARP request for Host B's IP without broadcasting over the IP fabric, thus providing the ARP response locally.

### NEW QUESTION # 30

Exhibit.

You have a sample configuration for connecting two sites through EVPN-VXLAN by exchanging IP prefix routes. Referring to the exhibit, which two statements regarding the configuration are true? (Choose two.)

- A. The VNI must match on all devices for the same customer.
- B. The advertise direct-nexthop option enables the receiver to resolve the next-hop route using only information carried in the Type 5 route.
- C. The VNI should be unique on all devices for each customer site.
- D. The advertise direct-nexthop option enables the receiver to resolve the next-hop route using only information carried in the Type 2 route.

**Answer: A,B**

Explanation:

EVPN-VXLAN Configuration:

\* The configuration provided in the exhibit shows an EVPN-VXLAN setup where IP prefix routes are exchanged between two sites. The advertise direct-nexthop option and the VNI (Virtual Network Identifier) settings are crucial in this context.

Advertise Direct-Nexthop:

\* Option A: The advertise direct-nexthop option ensures that the next-hop route is resolved using only the information carried in the EVPN Type 5 route. Type 5 routes are used for IP prefix advertisement in EVPN, which is key to enabling Layer 3 interconnectivity between different VXLAN segments.

VNI Consistency:

\* Option C: For the same customer across different devices, the VNI must be consistent. This consistency ensures that all devices can correctly map traffic to the appropriate VXLAN segment, maintaining seamless Layer 2 and Layer 3 connectivity.

### NEW QUESTION # 31

.....

I know that you are already determined to make a change, and our JN0-683 exam materials will spare no effort to help you. After you purchase our JN0-683 practice engine, I hope you can stick with it. We can promise that you really don't need to spend a long time and you can definitely pass the JN0-683 Exam. As we have so many customers passed the JN0-683 study questions, the pass rate is high as 98% to 100%. And this data is tested. With our JN0-683 learning guide, you won't regret!
