Fortinet FCSS - Network Security 7.4 Support Engineer Sample Questions (Q62-Q67):

NEW QUESTION # 62

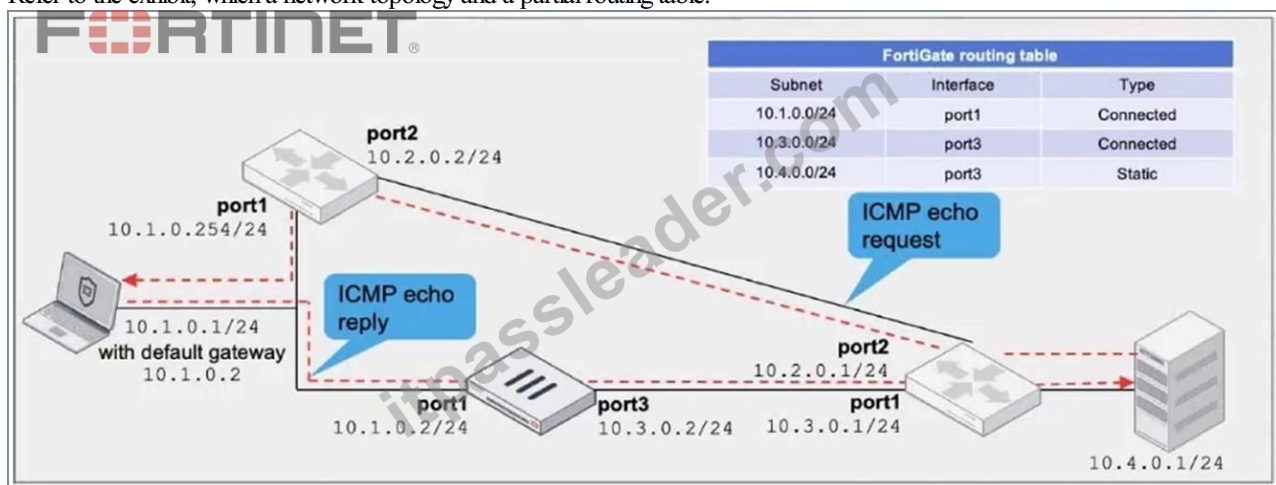

What are two functions of automation stitches? (Choose two.)

- A. You can create automation stitches to run diagnostic commands and attach the results to an email message when CPU or memory usage exceeds specified thresholds.
- B. You can configure automation stitches on any FortiGate device in a Security Fabric environment.
- C. You can set an automation stitch configured to execute actions in parallel to insert a specific delay between actions.
- D. You can configure automation stitches to execute actions sequentially by taking parameters from previous actions as input for the current action.

Answer: A,D

NEW QUESTION # 63

Refer to the exhibit, which a network topology and a partial routing table.

FortiGate has already been configured with a firewall policy that allows all ICMP traffic to flow from port1 to port3. Which changes must the administrator perform to ensure the server at 10.4.0.1/24 receives the echo reply from the laptop at 10.1.0.1/24?

- A. A firewall policy that allows all ICMP traffic from port3 to port1.
- B. Enable asymmetric routing under config system settings.
- C. Modify the default gateway on the laptop from 10.1.0.2 to 10.2.0.2.
- D. Change the configuration from strict RPF check mode to feasible RPF check mode.

Answer: A

Explanation:

Because FortiGuard is a stateful firewall it still needs an explicit policy to allow the return ICMP replies, even though the session was initiated from port1. By adding a firewall policy permitting ICMP from port3 back to port1, the echoreplies arriving on port3 will be forwarded to the laptop on port1. Without this reverse policy, the server's replies would be dropped at the FortiGate. This ensures bidirectional ICMP flow between 10.1.0.1 and 10.4.0.1.

NEW QUESTION # 64

Refer to the exhibit, which shows a partial web filter profile configuration.

The URL www.dropbox.com is categorized as File Sharing and Storage. Which action does FortiGate take if a user attempts to access www.dropbox.com?

- A. Based on the Web Content filter configuration, access to www.dropbox.com would be exempted.
- B. FortiGate blocks the connection, based on the FortiGuard category-based filter configuration.
- C. Based on the URL Filter configuration, FortiGate allows the connection.
- D. FortiGate blocks the connection as an invalid URL.

Answer: C

Explanation:

FortiGate will allow the user's request, because static URL filter entries take priority over the FortiGuard category block. The *dropbox.com wildcard allow rule in the URL Filter overrides the "File Sharing and Storage" block.
