- A. Migrate the local PSMConnect users to Domain users.
- B. Modify the UseRDSPerUser parameter to Yes on every Windows-related platform.
- C. Install the RDS License Server Service on Windows 2016.
- D. Add the UseRDSPerUser=Yes line to the basic\_psm.ini parameters file.

**Answer: A**

Explanation:

CyberArk documents that due to RDS licensing enforcement in Windows 2019/2022, Per-user licensing is not supported for local users, and (when Per-user CALs are required) you should move the built-in PSM application users (PSMConnect / PSMAdminConnect) from local to domain users.

- A. Create the required users in one directory and configure the Identity Connector to read that directory, as there can only be one Identity Connector.
- **B. Deploy Identity Connectors in the newly acquired infrastructure and create user mappings.**
- C. Create mappings for both directories from the original Identity Connector.
- D. Switch all users to SAML authentication as there can only be one Identity Connector.

**Answer: B**

Explanation:

To map LDAP users from both your customer and the smaller organization they have merged with, especially when there is no network connectivity between the two infrastructures, the best approach is to:

\* Deploy Identity Connectors in the newly acquired infrastructure and create user mappings (Option C). This involves setting up additional Identity Connectors within the smaller organization's network. These connectors will facilitate the integration of user
