Salesforce Analytics-Admn-201 Valid Test Prep | New Analytics-Admn-201 Exam Pass4sure

VerifiedDumps Salesforce Analytics-Admn-201 exam training materials are provided in PDF format and software format. It contains Salesforce Analytics-Admn-201 exam questions and answers. These issues are perfect, Which can help you to be successful in the Salesforce Analytics-Admn-201 Exam. VerifiedDumps Salesforce Analytics-Admn-201 exam comprehensively covers all syllabus and complex issues. The VerifiedDumps Salesforce Analytics-Admn-201 exam questions and answers is the real exam challenges, and help you change your mindset.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 2	• Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 3	• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 4	• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.

Topic 5	• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.

New Salesforce Analytics-Admn-201 Exam Pass4sure - Exam Analytics-Admn-201 Simulator

Our Analytics-Admn-201 learning materials are known for instant download. You can get the download link and password within ten minutes after purchasing, therefore you can start your learning as quickly as possible. Besides, Analytics-Admn-201 exam dumps contain most of knowledge points of the exam, and it will be enough for you to pass the exam, and in the process of practicing Analytics-Admn-201 Exam Dumps, your professional ability will also be improved. We offer you free update for 365 days after purchasing. The latest version for Analytics-Admn-201 training materials will be sent to your email automatically.

Salesforce Certified Tableau Server Administrator Sample Questions (Q45-Q50):

NEW QUESTION # 45
What command should you run to update the automatically-generated secrets that are created during a Tableau Server installation?

- A. tsm data-access caching set -r 1
- B. tsm licenses refresh
- C. tsm security regenerate-internal-tokens
- D. tsm security validate-asset-keys

Answer: C

Explanation:
Tableau Server uses internal secrets (tokens) for secure communication between its processes (e.g., Repository, File Store). These are automatically generated during installation and can be regenerated if compromised or for security maintenance. The command to update these is:
* tsm security regenerate-internal-tokens: This regenerates the internal security tokens, ensuring all processes use the new tokens after a restart.
* Option C (tsm security regenerate-internal-tokens): Correct. This is the documented command for updating internal secrets.
* Option A (tsm data-access caching set -r 1): Incorrect. This command configures caching behavior, not security tokens.
* Option B (tsm licenses refresh): Incorrect. This refreshes license data, unrelated to internal secrets.
* Option D (tsm security validate-asset-keys): Incorrect. This validates encryption keys for assets, not internal tokens.
Reference: Tableau Server Documentation - "Regenerate Internal Tokens" (https://help.tableau.com/current /server/en-us/cli_security.htm#regenerate-internal-tokens).

NEW QUESTION # 46
To which site role can you associate the Viewer user-based license level?

- A. Explorer (can publish)
- B. Explorer
- C. Viewer
- D. Creator

Answer: C

Explanation:
Tableau Server uses a role-based licensing model with three primary license levels: Creator, Explorer, and Viewer. Each license

level corresponds to specific site roles that define what users can do on the server.
Viewer License: This is the most restrictive license, allowing users to view and interact with published content (e.g., dashboards and visualizations) but not to create or publish new content.
Site Role: The Viewer license can only be associated with the Viewer site role. This role restricts users to viewing capabilities, aligning with the license's purpose.
Option A (Creator): Incorrect. The Creator license is for users who can create, edit, and publish content using Tableau Desktop and the web interface. It corresponds to the Creator site role, not Viewer.
Option B (Explorer (can publish)): Incorrect. This is a variation of the Explorer license, which allows users to edit and publish content within limits. It's more permissive than Viewer.
Option C (Viewer): Correct. The Viewer site role matches the Viewer license level perfectly.
Option D (Explorer): Incorrect. The Explorer license allows users to explore data and create content in the web interface, exceeding the Viewer license's capabilities.
Reference: Tableau Server Documentation - "User Site Roles and Licenses" (https://help.tableau.com/current /server/en-us/license_usage.htm).

NEW QUESTION # 47

Which three types of data should you backup to ensure that you can restore a Tableau Server? (Choose three.)

- A. Configuration data
- B. Repository data
- C. Topology data
- D. Server secrets and Repository passwords

Answer: A,B,D

Explanation:
Backing up Tableau Server ensures recovery from failures or migrations. A full backup includes multiple data types-let's dissect this comprehensively:
* Backup Components:
* Repository Data: PostgreSQL database with metadata (users, permissions, workbooks). Backed up via tsm maintenance backup -f <filename>.tsbak.
* Configuration Data: Server settings (e.g., ports, authentication) also in the .tsbak file.
* Server Secrets: Encryption keys, internal tokens, Repository passwords-critical for restoring functionality.
* Extracts: .hyper files in File Store (optional, separate backup).
* Option A (Server secrets and Repository passwords): Correct.
* Details: Includes encryption keys (for extracts), internal tokens (process communication), and Repository credentials. Backed up separately or stored securely (e.g., tsm security export-keys).
* Why Critical: Without these, restored data may be inaccessible or services may fail.
* Option C (Configuration data): Correct.
* Details: Ports, authentication settings, process topology-part of the .tsbak file.
* Why Critical: Restores server behavior and connectivity post-recovery.
* Option D (Repository data): Correct.
* Details: Core metadata database-also in .tsbak.
* Why Critical: Without it, all content and user data is lost.
* Option B (Topology data): Incorrect.
* Details: Topology (process distribution) is part of configuration data in the .tsbak, not a separate entity. It's not distinctly backed up as "topology data." Why This Matters: A complete backup (secrets, config, repository) ensures full restoration-missing any piece risks an unusable server.
Reference: Tableau Server Documentation - "Back Up Tableau Server Data" (https://help.tableau.com/current /server/en-us/backup_restore.htm).

NEW QUESTION # 48

Which two commands are valid and complete commands? (Choose two.)

- A. tsm maintenance cleanup
- B. tsm maintenance ziplogs
- C. tsm maintenance backup
- D. tsm maintenance restore

Answer: A,B

Explanation:
TSM commands manage Tableau Server maintenance-let's validate their syntax:
* Command Requirements:
* Some need arguments (e.g., file paths); others are standalone.
* Valid and Complete: Must work as-is without errors.
* Option C (tsm maintenance cleanup): Correct.
* Details: Removes temporary files and old logs-no arguments required (optional flags like -l exist).
* Use: tsm maintenance cleanup-runs fully.
* Option D (tsm maintenance ziplogs): Correct.
* Details: Creates a zip of logs (e.g., tsm-logs.zip)-no arguments needed (optional -d for date range).
* Use: tsm maintenance ziplogs-complete and valid.
* Option A (tsm maintenance backup): Incorrect.
* Why: Requires -f <filename>.tsbak (e.g., tsm maintenance backup -f backup.tsbak)-incomplete without it.
* Option B (tsm maintenance restore): Incorrect.
* Why: Needs -f <filename>.tsbak (e.g., tsm maintenance restore -f backup.tsbak)-not standalone.
Why This Matters: Correct syntax ensures maintenance tasks execute without errors-critical for server health.
Reference: Tableau Server Documentation - "TSM Maintenance Commands" (https://help.tableau.com/current
/server/en-us/cli_maintenance_tsm.htm).

NEW QUESTION # 49
What should you do to configure the view URL and enable recording for a site that has recording workbook performance metrics
enabled?

- A. Click the Performance link in the toolbar at the top of the view
- B. Delete the session ID in the URL and reload the view
- C. Type :record_performance=yes& at the end of the view URL, immediately after the session ID
- D. Type :record_performance=yes& at the end of the view URL, immediately before the session ID

Answer: C

Explanation:
Tableau Server can record performance metrics for workbooks to troubleshoot slow-loading views. This feature must be enabled at
the site level (via Settings > General > Allow Performance Recording). Once enabled, you can trigger recording for a specific view
by modifying its URL.
The correct syntax is to append :record_performance=yes& to the view URL, immediately after the session ID. For example:
* Original
URL: http://server/#/site/my-site/views/workbook/view?:iid=1
* Modified
URL: http://server/#/site/my-site/views/workbook/view?:iid=1:record_performance=yes
&
After loading the view with this parameter, a performance recording is generated and accessible via the Performance option in the
toolbar.
* Option B (Type :record_performance=yes& at the end of the view URL, immediately after the session ID): Correct. This follows
Tableau's documented method for enabling performance recording.
* Option A (Click the Performance link in the toolbar): Incorrect. The Performance link appears only after recording is triggered via
the URL; it's not the method to enable it.
* Option C (Type :record_performance=yes& immediately before the session ID): Incorrect. The parameter must follow the session
ID (e.g., :iid=1) to function correctly.
* Option D (Delete the session ID in the URL and reload the view): Incorrect. The session ID is required for the view to load
properly; removing it breaks the URL.
Reference: Tableau Server Documentation - "Record Performance of a View" (https://help.tableau.com/current
/server/en-us/perf_record.htm).

NEW QUESTION # 50
......

This Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) practice exam software is easy to use. A free demo

version of this format is also available to assess it before buying. It is compatible with all Windows computers. This Salesforce Analytics-Admn-201 Practice Test software familiarizes you with the real Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam pattern. You must have an active Internet connection to validate your product license.
