人生はさまざまな試みがある、人生の頂点にかからないけど、刺激のない生活に変化をもたらします。あなたは我々社の提供する質の高いSalesforce Data-Architect問題集を使用して、試験に参加します。もし無事にData-Architect試験に合格したら、あなたはもっと自信になって、更なる勇気でやりたいことをしています。

Salesforce Data-Architect（Salesforce Certified Data Architect）認定試験は、Salesforceエコシステムにおいて最も求められる資格の一つです。この試験は、Salesforceデータアーキテクチャに関わるプロフェッショナルの知識とスキルを検証することを目的としています。設計、構築、および管理の責任を持つアーキテクト、開発者、管理者を対象としています。

Salesforce Data-Architect認定試験は、Salesforceプラットフォーム内でデータアーキテクチャ、モデリング、および管理に関する知識をテストするように設計されています。この認定は、複雑なデータソリューションを設計および実装し、データガバナンス、データセキュリティ、およびデータ品質のベストプラクティスを深く理解している専門家を対象としています。

## 早速ダウンロードData-Architect資料勉強 | 最初の試行で簡単に勉強して試験に合格する & 有効なData-Architect: Salesforce Certified Data Architect

貴重な時間を無駄にすることを心配する必要はありませんが、Data-Architect認定を取得することに失敗します。多くの人が教材を使用しており、試験の合格率は99%です。これは、教材で学習している限り、間違いなくData-Architect試験に合格することを意味します。何らかの問題が発生し、Data-Architect試験にSalesforce Certified Data Architect合格しなかった場合、全額返金されます。当社Salesforceの誠実さは、製品の品質に起因しています。試験の学習資料の1年間の無料アップデートを提供します。さあ、決心してData-Architect試験の急流を手に入れましょう！

## Salesforce Certified Data Architect 認定 Data-Architect 試験問題 (Q195-Q200):

### 質問 # 195

NTO has a loyalty program to reward repeat customers. The following conditions exist:

1. Reward levels are earned based on the amount spent during the previous 12 months.
2. The program will track every item a customer has bought and grant them points for discount.
3. The program generates 100 million records each month.

NTO customer support would like to see a summary of a customer's recent transaction and reward level(s) they have attained.

Which solution should the data architect use to provide the information within the salesforce for the customer support agents?

- A. Capture the reward program data in an external data store and present the 12 months trailing summary in salesforce using salesforce connect and then external object.
- B. Create a custom object in salesforce to capture and store all reward program. Populate nightly from the point-of-scale system, and present on the customer record.
- **C. Create a custom big object to capture the reward program data and display it on the contact record and update nightly from the point-of-scale system.**
- D. Provide a button so that the agent can quickly open the point of sales system displaying the customer history.

正解: C

解説:

According to the Get Started with Big Objects unit on Trailhead, one of the use cases for custom big objects is to store and manage loyalty program data for customers. The unit states that "From loyalty programs to transactions, order, and billing information, use a custom big object to keep track of every detail." Therefore, a custom big object can be used to capture the reward program data and display it on the contact record. Additionally, according to the Big Objects Implementation Guide, big objects can handle massive amounts of data (up to billions of records) and can be updated nightly from external systems using Bulk API or batch Apex. Therefore, a custom big object can meet the requirements of NTO's loyalty program scenario.

#### 質問 # 196

UC has migrated its Back-office data into an on-premise database with REST API access. UC recently implemented Sales cloud for its sales organization. But users are complaining about a lack of order data inside SF.

UC is concerned about SF storage limits but would still like Sales cloud to have access to the data.

Which design patterns should a data architect select to satisfy the requirement?

- A. Migrate and persist the data in SF to take advantage of native functionality.
- B. Develop a bidirectional integration between the on-premise system and Salesforce.
- **C. Use SF Connect to virtualize the data in SF and avoid storage limits.**
- D. Build a UI for the on-premise system and iframe it in Salesforce

正解: C

#### 質問 # 197

Universal Containers (UC) has a custom discount request object set as a detail object with a custom product object as the master. There is a requirement to allow the creation of generic discount requests without the custom product object as its master record.

What solution should an Architect recommend to UC?

- A. Mandate the selection of a custom product for each discount request.
- B. Create a placeholder product record for the generic discount request.
- **C. Change the master-detail relationship to a lookup relationship.**
- D. Remove the master-detail relationship and keep the objects separate.

正解: C

#### 質問 # 198

What is an advantage of using Custom metadata type over Custom setting?

- **A. Custom metadata records are deployable using packages.**
- B. Custom metadata records are editable in Apex.
- C. Custom metadata records are not copied from production to sandbox.
- D. Custom metadata types are available for reporting.

正解: A

#### 質問 # 199

Get Cloud Consulting needs to integrate two different systems with customer records into the Salesforce Account object. So that no duplicate records are created in Salesforce, Master Data Management will be used.

An Architect needs to determine which system is the system of record on a field level.

What should the Architect do to achieve this goal?

- A. Any field that is an input field in either external system will be overwritten by the last record integrated and can never have a system of record.
- B. The database schema for each external system should be reviewed, and fields with different names should always be separate fields in Salesforce.
- **C. Key stakeholders should review any fields that share the same purpose between systems to see how they will be used in Salesforce.**
- D. Master Data Management systems determine system of record, and the Architect doesn't have to think about what data is controlled by what system.

正解: C

解説:

Key stakeholders from both systems should collaborate with the Architect to determine which system is the system of record on a field level is what the Architect should do to achieve this goal of integrating two different systems with customer records into the Salesforce Account object using Master Data Management. The system of record is the authoritative source of truth for a given entity or field in a given context. Different systems may have different levels of accuracy, completeness, timeliness, or relevance for different fields. Therefore, it is important to involve key stakeholders from both systems who have knowledge and expertise about their data quality and business needs to decide which system should be the system of record for each field. The Architect should facilitate this collaboration and document the decisions and rationale for each field. The other options are not correct or feasible, as they would either delegate or abdicate the responsibility of determining the system of record, ignore or disregard the input from key stakeholders, or assume or impose a default system of record without considering the data quality and business needs.

## 質問 # 200
