## Apple Deployment and Management Exam 認定 DEP-2025 試験問題 (Q129-Q134):

### 質問 # 129

A user enrolled their personal iPhone in your organization's MDM solution. Which of these management capabilities does your organization's MDM solution have on the user's iPhone?

- A. Remotely wipe the device
- B. Access device location
- C. Install and configure apps
- D. Enable Activation Lock

正解: C

解説:

User Enrollment limits MDM capabilities. The iOS Deployment Reference states, "With User Enrollment, MDM can install and configure apps, manage accounts, and apply restrictions to managed data, but it cannot access location, wipe the device, or enable Activation Lock." Reference:

iOS Deployment Reference, "User Enrollment" section.

Apple Platform Deployment Guide, "BYOD Management" section.

### 質問 # 130

Which feature allows administrators to streamline the creation of Managed Apple IDs based on existing Google Workspace or Azure AD data?

- A. Federated Authentication
- B. SAML
- C. Active Directory
- D. MSCHAPv2

正解: A

解説:

Federated Authentication allows administrators to link Apple School Manager or Apple Business Manager with identity providers

like Google Workspace or Azure AD, streamlining Managed Apple ID creation by syncing user data (e.g., names, emails). Users can then sign in with their existing credentials, leveraging SSO. MSCHAPv2 (option A) is a VPN authentication protocol, not related to ID creation. Active Directory (option C) is an IdP but not the feature itself. SAML (option D) is a protocol used in federation, but "Federated Authentication" is the broader Apple feature. The Apple Platform Deployment Guide details this process.

#### 質問 # 131

A user enrolled their personally owned iPhone in your MDM solution to access organizational services. Which of these is cryptographically separated for managed and personal data?

- **A. Keychain items**
- B. Contacts
- C. Safari bookmarks
- D. Safari profiles

正解: A

解説:

User Enrollment separates managed Keychain items. The iOS Deployment Reference states, "With User Enrollment, Keychain items associated with a Managed Apple ID are stored in a distinct cryptographic container." Options B, C, and D aren't separated unless tied to managed apps.

References:

iOS Deployment Reference, "User Enrollment" section.

Apple Platform Deployment Guide, "Data Separation" section.

#### 質問 # 132

Your organization is buying books through Apple Business Manager. Which of these is an assignment criteria for books?

- **A. Users with a Managed Apple Account**
- B. Mac computers
- C. iPhone and iPad devices
- D. Shared iPad devices

正解: A

解説:

Apple Business Manager allows organizations to purchase and distribute books (such as textbooks or reference material) using the Apps and Books section. Apple Learning states that books can only be assigned to users, not to devices. Specifically, the users must have a Managed Apple Account in order to receive the content.

Unlike apps, which can be assigned either to users or devices, books are linked to the individual account. This ensures that digital rights management (DRM) is preserved while also protecting user access. Books cannot be assigned directly to iPhones, iPads, or Macs as standalone hardware, nor can they be tied to Shared iPad device pools. Therefore, the correct assignment criteria for books in Apple Business Manager is Managed Apple Account users.

#### 質問 # 133

What do you need for account-driven Device Enrollment?

- **A. A Managed Apple Account**
- B. A personal Apple Account
- C. A supervised device
- D. Google Workspace or Microsoft Entra ID

正解: A

解説:

Apple's account-driven enrollment allows users to self-enroll devices into MDM without the need for profiles distributed manually. To use this enrollment method, Apple requires the user to sign in with a Managed Apple Account created in Apple Business Manager or Apple School Manager. When the user enters their credentials, the device recognizes the account as managed and begins the

enrollment process. Apple Learning highlights that this workflow simplifies enrollment for end users while ensuring the device is linked to organizational management. Supervision is not a prerequisite here, and personal Apple IDs are not eligible. Identity providers like Google Workspace or Microsoft Entra ID may provide federated authentication for the Managed Apple Account, but the account itself must exist as a managed entity in ABM or ASM.
