Learning with our H13-321_V2.5 learning guide is quite a simple thing, but some problems might emerge during your process of H13-321_V2.5 exam materials or buying. Considering that our customers are from different countries, there is a time difference between us, but we still provide the most thoughtful online after-sale service twenty four hours a day, seven days a week, so just feel free to contact with us through email anywhere at any time. For customers who are bearing pressure of work or suffering from career crisis, HCIP-AI-EI Developer V2.5 learn tool of inferior quality will be detrimental to their life, render stagnancy or even cause loss of salary. So choosing appropriate H13-321_V2.5 Test Guide is important for you to pass the exam. One thing we are sure, that is our H13-321_V2.5 certification material is reliable.

Under the support of our study materials, passing the exam won't be an unreachable mission. More detailed information is under below. We are pleased that you can spare some time to have a look for your reference about our H13-321_V2.5 test prep. As long as you spare one or two hours a day to study with our laTest H13-321_V2.5 Quiz prep, we assure that you will have a good command of the relevant knowledge before taking the exam. What you need to do is to follow the H13-321_V2.5 exam guide system at the pace you prefer as well as keep learning step by step.

Huawei HCIP-AI-EI Developer V2.5 Sample Questions (Q44-Q49):

NEW QUESTION # 44

The development of large models should comply with ethical principles to ensure the legal, fair, and transparent use of data.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

Ethical AI development requires ensuring that large models are trained and deployed in a way that respects laws, fairness, and transparency. This includes preventing bias, ensuring user privacy, protecting intellectual property, and being transparent about data usage and decision-making processes.

Exact Extract from HCIP-AI EI Developer V2.5:

"The development and deployment of large models must follow ethical principles to ensure legal, fair, and transparent use of data, avoiding bias and misuse." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Ethical AI Practices

NEW QUESTION # 45

Which of the following is a learning algorithm used for Markov chains?

- A. Forward-backward algorithm
- B. Viterbi algorithm
- C. Exhaustive search
- D. Baum-Welch algorithm

Answer: D

Explanation:

The Baum-Welch algorithm is a special case of the Expectation-Maximization (EM) algorithm used to train Hidden Markov Models (HMMs). It estimates model parameters (transition probabilities, emission probabilities) when the training data is incomplete or hidden.

* Viterbi algorithm is for decoding, not training.

* Forward-backward algorithm is part of Baum-Welch's expectation step but is not a standalone training method.

* Exhaustive search is not a standard HMM training algorithm.

Exact Extract from HCIP-AI EI Developer V2.5:

"The Baum-Welch algorithm iteratively optimizes HMM parameters using forward and backward probability computations until convergence." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: HMM Training Algorithms

NEW QUESTION # 46

Huawei Cloud ModelArts is a one-stop AI development platform that supports multiple AI scenarios. Which of the following scenarios are supported by ModelArts?

- A. Video analytics
- B. Speech recognition
- C. Object detection
- D. Image classification

Answer: A,B,C,D

Explanation:

ModelArts provides an integrated environment for data labeling, model training, deployment, and management, supporting various AI application scenarios:

* Image classification for categorizing visual content.

* Object detection for locating and identifying multiple objects in images or video frames.

* Speech recognition for converting speech to text.

* Video analytics for automated video content analysis.

Exact Extract from HCIP-AI EI Developer V2.5:

"ModelArts supports a wide range of AI tasks including image classification, object detection, speech recognition, and intelligent video analytics." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: ModelArts Overview

NEW QUESTION # 47

Which of the following statements about the standard normal distribution are true?

- A. The mean is 1.
- B. The variance is 1.
- C. The variance is 0.

- **D. The mean is 0.**

Answer: B,D

Explanation:

A standard normal distribution is a special case of the normal distribution with:

* Mean (μ) = 0

* Variance (σ^2) = 1 This standardization is widely used in statistics and machine learning to normalize features for improved model convergence. Statements A and B are incorrect because variance is never 0 in a valid distribution, and the mean is 0, not 1.

Exact Extract from HCIP-AI EI Developer V2.5:

"The standard normal distribution is defined with $\mu = 0$ and $\sigma^2 = 1$, providing a normalized scale for statistical analysis."

NEW QUESTION # 48

In an image preprocessing experiment, the `cv2.imread("lena.png", 1)` function provided by OpenCV is used to read images. The parameter "1" in this function represents a ----- -channel image. (Fill in the blank with a number.)

Answer:

Explanation:

3

Explanation:

In OpenCV:

* `cv2.imread(filename, 1)` reads the image in color mode.

* This loads the image as a 3-channel BGR image (Blue, Green, Red).

* Other modes: 0 for grayscale, -1 for unchanged (including alpha channel).

Exact Extract from HCIP-AI EI Developer V2.5:

"When the second parameter of `cv2.imread` is 1, the image is read in color mode, resulting in a 3-channel BGR image."
