# Free 1 year Databricks Databricks-Certified-Data-Analyst-Associate Dumps Updates

Nowadays, we live so busy every day. Especially for some businessmen who want to pass the Databricks-Certified-Data-Analyst-Associate exam and get related certification, time is vital importance for them, they may don't have enough time to prepare for their exam. Some of them may give it up. But our Databricks-Certified-Data-Analyst-Associate guide tests can solve these problems perfectly, because our study materials only need little hours can be grasped. Believing in our Databricks-Certified-Data-Analyst-Associate Guide tests will help you get the certificate and embrace a bright future. Time and tide wait for no man. Come to buy our test engine.

## Databricks Databricks-Certified-Data-Analyst-Associate Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | <ul><li>Databricks SQL: This topic discusses key and side audiences, users, Databricks SQL benefits, complementing a basic Databricks SQL query, schema browser, Databricks SQL dashboards, and the purpose of Databricks SQL endpoints</li><li>warehouses. Furthermore, the delves into Serverless Databricks SQL endpoint</li><li>warehouses, trade-off between cluster size and cost for Databricks SQL endpoints</li><li>warehouses, and Partner Connect. Lastly it discusses small-file upload, connecting Databricks SQL to visualization tools, the medallion architecture, the gold layer, and the benefits of working with streaming data.</li></ul> |
| Topic 2 | <ul><li>SQL in the Lakehouse: It identifies a query that retrieves data from the database, the output of a SELECT query, a benefit of having ANSI SQL, access, and clean silver-level data. It also compares and contrasts MERGE INTO, INSERT TABLE, and COPY INTO. Lastly, this topic focuses on creating and applying UDFs in common scaling scenarios.</li></ul> |
| Topic 3 | <ul><li>Analytics applications: It describes key moments of statistical distributions, data enhancement, and the blending of data between two source applications. Moroever, the topic also explains last-mile ETL, a scenario in which data blending would be beneficial, key statistical measures, descriptive statistics, and discrete and continuous statistics.</li></ul> |
| Topic 4 | <ul><li>Data Visualization and Dashboarding: Sub-topics of this topic are about of describing how notifications are sent, how to configure and troubleshoot a basic alert, how to configure a refresh schedule, the pros and cons of sharing dashboards, how query parameters change the output, and how to change the colors of all of the visualizations. It also discusses customized data visualizations, visualization formatting, Query Based Dropdown List, and the method for sharing a dashboard.</li></ul> |

| Topic 5 | • Data Management: The topic describes Delta Lake as a tool for managing data files, Delta Lake manages table metadata, benefits of Delta Lake within the Lakehouse, tables on Databricks, a table owner's responsibilities, and the persistence of data. It also identifies management of a table, usage of Data Explorer by a table owner, and organization-specific considerations of PII data. Lastly, the topic it explains how the LOCATION keyword changes, usage of Data Explorer to secure data. |

# Get Valid Databricks Databricks-Certified-Data-Analyst-Associate Exam Questions and Answer

After studying with our Databricks-Certified-Data-Analyst-Associate practice engine, as our loyal customers wrote to us that they are now more efficient than their colleagues, so they have received more attention from their leaders and got the promotion on both incomes and positions. We are all ordinary professional people. We must show our strength to show that we are worth the opportunity. And with the help of our Databricks-Certified-Data-Analyst-Associate Exam Braindumps, they all proved themselves and got their success. Just buy our Databricks-Certified-Data-Analyst-Associate learning guide, you will be one of them too!

# Databricks Certified Data Analyst Associate Exam Sample Questions (Q37-Q42):

**NEW QUESTION # 37**
A data analyst has set up a SQL query to run every four hours on a SQL endpoint, but the SQL endpoint is taking too long to start up with each run.
Which of the following changes can the data analyst make to reduce the start-up time for the endpoint while managing costs?

- A. Increase the minimum scaling value
- B. Reduce the SQL endpoint cluster size
- C. Increase the SQL endpoint cluster size
- D. Use a Serverless SQL endpoint
- E. Turn off the Auto stop feature

**Answer: D**

Explanation:
A Serverless SQL endpoint is a type of SQL endpoint that does not require a dedicated cluster to run queries. Instead, it uses a shared pool of resources that can scale up and down automatically based on the demand. This means that a Serverless SQL endpoint can start up much faster than a SQL endpoint that uses a cluster, and it can also save costs by only paying for the resources that are used. A Serverless SQL endpoint is suitable for ad-hoc queries and exploratory analysis, but it may not offer the same level of performance and isolation as a SQL endpoint that uses a cluster. Therefore, a data analyst should consider the trade-offs between speed, cost, and quality when choosing between a Serverless SQL endpoint and a SQL endpoint that uses a cluster. Reference: Databricks SQL endpoints, Serverless SQL endpoints, SQL endpoint clusters

**NEW QUESTION # 38**
A data analyst is processing a complex aggregation on a table with zero null values and the query returns the following result:
Which query did the analyst execute in order to get this result?

- A. □
- B. □
- C. □
- D. □

**Answer: D**

**NEW QUESTION # 39**

A data engineer is working with a nested array column products in table transactions. They want to expand the table so each unique item in products for each row has its own row where the transaction_id column is duplicated as necessary.

They are using the following incomplete command:

Which of the following lines of code can they use to fill in the blank in the above code block so that it successfully completes the task?

- A. array(produces)
- B. array distinct(produces)
- C. reduce(produces)
- D. flatten(produces)
- E. explode(produces)

**Answer: E**

Explanation:
The explode function is used to transform a DataFrame column of arrays or maps into multiple rows, duplicating the other column's values. In this context, it will be used to expand the nested array column products in the transactions table so that each unique item in products for each row has its own row and the transaction_id column is duplicated as necessary. Reference: Databricks Documentation I also noticed that you sent me an image along with your message. The image shows a snippet of SQL code that is incomplete. It begins with "SELECT" indicating a query to retrieve data. "transaction_id," suggests that transaction_id is one of the columns being selected. There are blanks indicated by underscores where certain parts of the SQL command should be, including what appears to be an alias for a column and part of the FROM clause. The query ends with "FROM transactions;" indicating data is being selected from a 'transactions' table.

Databricks Certified Data Analyst Associate: This is the official page for the certification exam, where you can find the exam guide, registration details, and preparation tips.

Data Analysis With Databricks SQL: This is a self-paced course that covers the topics and skills required for the certification exam. You can access it for free on Databricks Academy.

Tips for the Databricks Certified Data Analyst Associate Certification: This is a blog post that provides some useful advice and study tips for passing the certification exam.

Databricks Certified Data Analyst Associate Certification: This is another blog post that gives an overview of the certification exam and its benefits.

## NEW QUESTION # 40

A data analyst wants the following output:
customer_name number_of_orders
John Doe 388
Zhang San 234
Which statement will produce this output?

- A. SELECT customerjiame, (order_id) number_of_orders
  FROM customers
  JOIN orders
  ON customers.customer_id = orders.customer_id;
- B. SELECT customer_name, count(order_id) number_of_orders
  FROM customers
  JOIN orders
  ON customers.customer_id = orders.customer_id USE customer_name;
- C. SELECT customerjiame, count(order_id)
  FROM customers
  JOIN orders
  ON customers.customer_id = orders.customer_id GROUP BY customerjiame;
- D. SELECT customer_name, count(order_id) AS number_of_orders
  FROM customers
  JOIN orders
  ON customers.customer_id = orders.customer_id
  GROUP BY customer_name;

**Answer: D**

**NEW QUESTION # 41**

A data analyst is attempting to drop a table my_table. The analyst wants to delete all table metadata and data.

They run the following command:

DROP TABLE IF EXISTS my_table;

While the object no longer appears when they run SHOW TABLES, the data files still exist.

Which of the following describes why the data files still exist and the metadata files were deleted?

- A. The table was external
- B. The table did not have a location
- C. The table's data was larger than 10 GB
- D. The table's data was smaller than 10 GB
- E. The table was managed

**Answer: A**

Explanation:

An external table is a table that is defined in the metastore, but its data is stored outside of the Databricks environment, such as in S3, ADLS, or GCS. When an external table is dropped, only the metadata is deleted from the metastore, but the data files are not affected. This is different from a managed table, which is a table whose data is stored in the Databricks environment, and whose data files are deleted when the table is dropped. To delete the data files of an external table, the analyst needs to specify the PURGE option in the DROP TABLE command, or manually delete the files from the storage system. Reference: DROP TABLE, Drop Delta table features, Best practices for dropping a managed Delta Lake table

**NEW QUESTION # 42**

......

For Databricks professionals, passing the Databricks Certified Data Analyst Associate Exam exams such as the Databricks-Certified-Data-Analyst-Associate Exam is essential to achieve their dream professional life. However, passing the Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) Exam is not an easy task, especially for those with busy schedules who need time to prepare well for the Databricks-Certified-Data-Analyst-Associate Exam. To ensure success on the Databricks-Certified-Data-Analyst-Associate Exam, you need Databricks Databricks-Certified-Data-Analyst-Associate Exam Questions that contain all the relevant information about the exam.
