Palo Alto NGFW-Engineer Certification Study Guide

Palo Alto NGFW-Engineer Certification Exam Details

Palo Alto NGFW-Engineer certifications are globally accepted and add significant value to any IT professional. The certification gives you a profound understanding of all the workings of the network models and the devices that are utilized with it. NWExam.com is proud to provide you with the best Palo Alto Exam Guides.

The [Palo Alto NGFW-Engineer](#) Exam is challenging, and thorough preparation is essential for success. This cert guide is designed to help you prepare for the NGFW-Engineer certification exam. It contains a detailed list of the topics covered on the Professional exam. These guidelines for the Next-Generation Firewall Engineer will help guide you through the study process for your certification.

To obtain Next-Generation Firewall Engineer certification, you are required to pass [Next-Generation Firewall Engineer](#) exam. This exam is created keeping in mind the

NGFW-Engineer權威認證，NGFW-Engineer考試

我們NewDumps Palo Alto Networks的NGFW-Engineer考試培訓資料給所有需要的人帶來最大的成功率，通過微軟的NGFW-Engineer考試是一個具有挑戰性的認證考試。現在除了書籍，互聯網被認為是一個知識的寶庫，在NewDumps你也可以找到屬於你的知識寶庫，這將是一個對你有很大幫助的網站，你會遇到複雜的測試方面的試題，我們NewDumps可以幫助你輕鬆的通過考試，它涵蓋了所有必要的知識Palo Alto Networks的NGFW-Engineer考試。

最新的 Network Security Administrator NGFW-Engineer 免費考試真題

(Q44-Q49):

問題 #44

In an active/active high availability (HA) configuration with two PA-Series firewalls, how do the firewalls use the HA3 interface?

- A. To synchronize sessions, forwarding tables, IPSec security associations, and ARP tables between firewalls in an HA pair
- B. To exchange hellos, heartbeats, HA state information, and management plane synchronization for routing and User-ID information
- **C. To perform session cache synchronization among all HA peers having the same cluster ID**
- D. To forward packets to the HA peer during session setup and asymmetric traffic flow

答案: C

解題說明:

In an active/active HA configuration with two PA-Series firewalls, the HA3 interface is used primarily for the exchange of HA state information between the firewalls. This includes:

Hellos and heartbeats to monitor the status of the HA peer.

Synchronization of management plane data, which includes critical routing and User-ID information.

問題 #45

Which method creates the most reliable user-to-IP mapping due to being based on a direct authentication from the user's device to the firewall?

- A. PAN-OS XML API to push mappings
- B. Polling security event logs with a User-ID agent
- **C. Portal authentication**
- D. Authentication logs from Syslog receiver

答案: C

解題說明:

Portal authentication creates user-to-IP mappings through direct, interactive authentication from the user's device to the firewall itself, making it the most reliable method because the identity is verified in real time at the source rather than inferred from logs or external systems.

問題 #46

An NGFW engineer is configuring multiple Panorama-managed firewalls to start sending all logs to Strata Logging Service. The Strata Logging Service instance has been provisioned, the required device certificates have been installed, and Panorama and the firewalls have been successfully onboarded to Strata Logging Service.

Which configuration task must be performed to start sending the logs to Strata Logging Service and continue forwarding them to the Panorama log collectors as well?

- A. Select the "Enable Duplicate Logging" option in the Cloud Logging section under Device --> Setup --> Management in the appropriate templates.
- **B. Select the "Enable Cloud Logging" option in the Cloud Logging section under Device --> Setup --> Management in the appropriate templates.**
- C. Enable the "Panorama/Cloud Logging" option in the Logging and Reporting Settings section under Device --> Setup --> Management in the appropriate templates.
- D. Modify all active Log Forwarding profiles to select the "Cloud Logging" option in each profile match list in the appropriate device groups.

答案: B

解題說明:

To begin sending logs to Strata Logging Service while continuing to forward them to Panorama log collectors, the necessary configuration is to enable Cloud Logging. This option is configured in the Cloud Logging section under Device # Setup # Management in the appropriate templates. Once enabled, this ensures that logs are directed both to the Strata Logging Service (cloud) and to the Panorama log collectors.

問題 #47

After a recent high availability (HA) failover test on an active/passive cluster, an engineer noted a 30-45 second delay before traffic started flowing through a Link Aggregation Control Protocol (LACP) aggregate interface on the newly active firewall.

What should have been configured to support LACP pre-negotiation to minimize LACP convergence delay?

- A. Enable LACP fast failover.
- **B. Enable in HA passive state.**
- C. Set LACP mode to passive.
- D. Set HA link monitoring to aggressive.

答案: B

解題說明:

Enabling LACP in the HA passive state allows the passive firewall to negotiate and maintain the LACP session with the switch before it becomes active, so when a failover occurs the aggregate is already formed and traffic can pass with minimal convergence delay.

問題 #48

How does a Palo Alto firewall handle traffic between two different security zones?

- A. Traffic is allowed automatically between zones
- B. Traffic between zones is forwarded without inspection
- C. Traffic is automatically encrypted between zones
- **D. Traffic is denied by default unless a security policy explicitly allows it**

答案: D

問題 #49
