Well-Prepared Latest Braindumps IDP Book & Efficient IDP Valid Exam Tips Ensure You a High Passing Rate

DOWNLOAD the newest Prep4pass IDP PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1tDhGsWjYO7z4CkkO746W4nIfnnQm6tzl

Prep4pass is one of the leading platforms that has been helping CrowdStrike IDP Exam Questions candidates for many years. Over this long time, period the CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam dumps helped countless CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam questions candidates and they easily cracked their dream CrowdStrike IDP Certification Exam. You can also trust CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam dumps and start CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam preparation today.

In order to provide most comfortable review process and straightaway dumps to those IDP candidates, we offer you three versions of IDP exam software: the PDF version, the online version, and software version. There will be one version right for you and help you quickly pass the IDP with ease, so that you can obtain the most authoritative international recognition on your IT ability.

IDP Valid Exam Tips, IDP Reliable Test Cost

More and more people hope to enhance their professional competitiveness by obtaining IDP certification. However, under the premise that the pass rate is strictly controlled, fierce competition makes it more and more difficult to pass the IDP examination. In

order to guarantee the gold content of the IDP Certification, the official must also do so. However, it is an indisputable fact that a large number of people fail to pass the IDP examination each year, some of them may choose to give it up while others may still choose to insist.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	• Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.
Topic 2	• Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.
Topic 3	• GraphQL API: Covers Identity API documentation, creating API keys, permission levels, pivoting from Threat Hunter to GraphQL, and building queries.
Topic 4	• Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling • disabling rules, applying changes, and required Falcon roles.
Topic 5	• Domain Security Assessment: Focuses on domain risk scores, trends, matrices, severity • likelihood • consequence factors, risk prioritization, score reduction, and configuring security goals and scopes.
Topic 6	• Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.
Topic 7	• Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.
Topic 8	• Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.
Topic 9	• User Assessment: Examines user attributes, differences between users • endpoints • entities, risk baselining, risky account types, elevated privileges, watchlists, and honeytoken accounts.
Topic 10	• Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.
Topic 11	• Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom • templated • scheduled workflows, branching logic, and loops.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q12-Q17):

NEW QUESTION # 12
What is the recommended action for the"Guest Account Enabled"risk?

- A. Disable Guest accounts on all endpoints
- B. Add related endpoints to a watchlist

- C. Disable the endpoint in Active Directory
- D. Apply a policy rule with an "Access" trigger and "Block" action on the Guest account

Answer: A

Explanation:
In Falcon Identity Protection, the"Guest Account Enabled"risk highlights the presence of local or domain guest accounts that remain active across endpoints. Guest accounts are inherently high-risk because they typically lack strong authentication controls, are rarely monitored, and are frequently abused by attackers for lateral movement and persistence.
The CCIS curriculum explicitly recommendsdisabling Guest accounts on all endpointsas the primary remediation action. This is because guest accounts often bypass standard identity governance processes and violate the principles ofleast privilegeandZero Trust, both of which are foundational to Falcon Identity Protection's security model. Disabling these accounts removes an unnecessary and dangerous authentication path from the environment.
Other options are incorrect because:
* Adding endpoints to a watchlist does not remediate the risk.
* Blocking access via a policy rule is less effective than eliminating the account entirely.
* Disabling endpoints in Active Directory does not directly address the guest account exposure.
Falcon Identity Protection prioritizeselimination of weak identity configurations, and disabling guest accounts is a direct, effective action that immediately lowers identity risk scores and reduces attack surface.
Therefore,Option Cis the correct and verified answer.

NEW QUESTION # 13
Which of the following would cause an identity-based incident type to change?

- A. A user changed the incident type in the console
- B. A user linked detections to the incident in the console
- C. An exclusion added to the incident
- D. Detections related to the incident

Answer: D

Explanation:
In Falcon Identity Protection,identity-based incidents are dynamicand can evolve over time as additional detections are associated with them. According to the CCIS curriculum, an incident'stype is automatically recalculatedbased on thedetections related to the incident, not by manual user actions.
As new identity-based detections are generated-such as credential misuse, lateral movement attempts, or abnormal authentication behavior-the platform continuously reassesses the incident. If the newly added detections indicate a different or more severe attack pattern, Falcon may automaticallychange the incident typeto better reflect the observed threat activity.
Manual actions such as adding exclusions or linking detections do not directly change the incident type.
Similarly, users cannot manually override an incident's classification. The classification logic is driven entirely by Falcon's analytics engine to ensure consistent, objective threat categorization.
This automated behavior is emphasized in CCIS training to highlight Falcon's ability toadapt incident context as attacks progress, makingOption Dthe correct answer.

NEW QUESTION # 14
Which of the following IDaaS connectors will allow Identity to ingest cloud activity along with applying SSO Policy?

- A. ADFS
- B. SAML
- C. Azure NPS
- D. Okta SSO

Answer: D

Explanation:
Falcon Identity Protection integrates withIdentity-as-a-Service (IDaaS)providers to ingest cloud authentication activity and enforce identity-based policies. According to the CCIS curriculum,Okta SSOis a supported IDaaS connector that enables Falcon to ingestcloud authentication eventswhile also applying Single Sign-On (SSO) policies.
Okta SSO provides rich identity telemetry, including login attempts, device context, and authentication outcomes. This data allows

Falcon Identity Protection to correlate on-premises and cloud-based identity activity, extending identity risk analysis beyond Active Directory.
The other options are incorrect:
* ADFSis an on-premises federation service, not a cloud IDaaS.
* Azure NPSis used for RADIUS-based MFA, not SSO ingestion.
* SAMLis a protocol, not an IDaaS connector.
Because Okta SSO provides both cloud activity ingestion and SSO enforcement,Option Bis the correct and verified answer.

NEW QUESTION # 15
An account without a phone number, operating system, or role of CEO would typically be defined as:

- A. Programmatic
- B. Human
- C. Corporate
- D. Enterprise

Answer: A

Explanation:
Falcon Identity Protection classifies accounts based onobserved authentication behavior and associated identity attributes, not solely on naming conventions. According to the CCIS curriculum,programmatic accounts(such as service accounts or application accounts) typically lack human-centric attributes like a phone number, assigned operating system, job title, or executive role (for example, CEO).
Human accounts generally have enriched identity context sourced from directory services and identity providers, including user profile details, interactive login behavior, and endpoint associations. In contrast, programmatic accounts authenticate non-interactively, often on predictable schedules, and do not require personal attributes to function.
Falcon analyzes authentication traffic to automatically identify these characteristics and classify the account accordingly. An account missing human identity signals-such as a phone number or endpoint ownership- strongly aligns with programmatic behavior.
Because the absence of personal attributes and interactive context is a defining indicator of aprogrammatic account,Option Ais the correct and verified answer.

NEW QUESTION # 16
Which of the following users would most likely have aHIGHrisk score?

- A. Privileged user with a Compromised Password
- B. User that is a member of the Domain Admins group
- C. User that has not logged in recently and is marked as Stale
- D. User that recently logged in from a shared endpoint

Answer: A

Explanation:
Falcon Identity Protection calculates user risk scores based on a combination ofprivilege level,credential exposure, andbehavioral indicators. According to the CCIS curriculum, aprivileged user with a compromised passwordrepresents one of the highest-risk identity scenarios.
Privileged accounts-such as administrators or service accounts with elevated access-already pose increased risk due to their access scope. When Falcon detects that such an account's credentials have been compromised, the risk escalates significantly because attackers can immediately gain high-impact access without further escalation.
The other options do not inherently represent the same level of risk:
* Logging in from a shared endpoint may increase risk but is context-dependent.
* Stale users are risky but typically lower risk than active compromised credentials.
* Domain Admin group membership alone does not imply compromise.
Becausecredential compromise combined with privilegedramatically increases attack potential,Option Bis the correct and verified answer.

NEW QUESTION # 17
.....

Prep4pass is not only a website but as a professional IDP Study Tool for candidates. Last but not least, we have advanced operation system of IDP training materials which not only can ensure our customers the fastest delivery speed but also can protect the personal information of our customers automatically. In addition, our professional after sale stuffs will provide considerate online after sale service twenty four hours a day, seven days a week for all of our customers.
