CTFL-AcT Latest Test Practice, CTFL-AcT Guide

Our CTFL-AcT PDF file is portable which means customers can carry this real questions document to any place. You just need smartphones, or laptops, to access this ISTQB Foundation Level - Acceptance Testing (CTFL-AcT) PDF format. These ISTQB Foundation Level - Acceptance Testing (CTFL-AcT) questions PDFs are also printable. So candidates who prefer to study in the old way which is paper study can print CTFL-AcT PDF questions as well.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which tool fits the mentioned acceptance test activities BEST?

- A. Model-based testing tools for managing incidents.
- B. Requirements management tools for managing acceptance test execution campaigns.
- **C. Business process management tools for modeling business processes and rules.**
- D. Test management and automation tools for business process model-based acceptance test generation.

Answer: C

Explanation:

Acceptance testing often relies on understanding and validating business processes and business rules. These are typically visualized and documented using business process modeling techniques such as BPMN (Business Process Model and Notation) and decision tables (DMN - Decision Model and Notation).

Business Process Management (BPM) tools are specifically designed for modeling and managing such workflows and rules. These tools are commonly used during acceptance test design to align tests with business objectives and processes.

Option C is correct because it directly aligns with the use of business process modeling in acceptance testing activities.

Other options:

A is incorrect because requirements management tools are more focused on requirement traceability and prioritization, not managing test execution campaigns.

B confuses roles - test management/automation tools can assist with test generation, but "business process model-based" generation is more accurately linked to BPM or model-based testing tools.

D is incorrect - model-based testing tools are used for test case generation, not incident management.

C). Business process management tools for modeling business processes and rules.

NEW QUESTION # 41

Which of the following provides the BEST description of Beta testing?

- A. Beta testing is generally performed jointly by testers, business analysts, product owners and developers
- B. In Agile, beta testing must be performed at the same time as user stories are developed
- C. The effectiveness of beta testing sessions depends on the quality of the test charter
- **D. Beta testing aims to obtain feedback from users in their context of use**

Answer: D

Explanation:

Beta testing is a form of external user acceptance testing where real users test the product in their environment before the official release. It helps identify issues that may not have been caught in internal testing and gather user feedback on functionality, usability, and performance in real-world conditions.

Option C is correct - the core goal of beta testing is to obtain user feedback in their actual usage context, providing insight into how the system performs outside of controlled environments.

Other options:

A: Test charters are used in exploratory testing, not typically in beta testing.

B: Incorrect - beta testing is not tied to the timing of user story development in Agile.

D: Incorrect - beta testing is performed by end users, not by internal team members like developers or business analysts.

C). Beta testing aims to obtain feedback from users in their context of use

NEW QUESTION # 42

A green courier working for an urban delivery service company uses three types of vehicles: normal bicycles, electric cargo bikes and electric vans. The following DMN table provides the rules used to select the type of zero emission vehicle to be used according to the weight (in kg) and the largest dimension (in cm) of the parcel, and the delivery distance (in km) Which one of the following statements is consistent with this DMN table?

	Parcel weight	Parcel size	Delivery distance	zero emission vehicle type
	Integer	Integer	string	string
1	<=10	<=50	<=10	Normal bicycle
2	(10,50]	-	<=25	Electric cargo bike
3	-	>150	-	Electric van

- **A. When the weight of the parcel exceeds 50kg then the electric cargo bike is necessarily used**
- B. Electric cargo bikes are never used for short distances
- C. Normal bicycles are mainly used for short trips regardless of the weight of the parcel
- D. Electric vans are systematically used when the parcel size is larger than 150cm

Answer: A

Explanation:

Let's analyze the DMN table shown in the image:

Rule 1: If weight #15, size #50, and distance #10 # use Normal bicycle

Rule 2: If weight is between 15 and 60 kg, size #150, and distance #25 # use Electric cargo bike Rule 3: Otherwise # use Electric van Now consider the options:

A: Incorrect - parcel size is not the only determining factor for using electric vans; it's about weight, size, and distance combined.

B: Incorrect - normal bicycles are used only when weight #15 kg, size #50 cm, and distance #10 km - so not just "short trips." C:

Incorrect - electric cargo bikes are explicitly used for short trips (#25 km), per Rule 2.

D: Correct - based on the rules, any weight above 15 kg (and up to 60 kg) results in the use of electric cargo bikes. So if weight >50 kg (but #60), cargo bike is still used under the conditions of Rule 2.

Therefore, the most consistent interpretation of the decision model is:

D). When the weight of the parcel exceeds 50kg then the electric cargo bike is necessarily used

NEW QUESTION # 43

During acceptance test execution, testers and business analysts closely work together during test execution. Of the following statements, which two statements are MOST likely?

- A. Business analysts gather information from development to evaluate the risk of further actions on other workflows
- B. Testers decide on the defect's priority depending on its impact on system usage
- C. Testers systematically record the actual outcome they observe during test execution in a defect
- **D. Testers verify the effectiveness of corrective actions and document their verdict in the defect report**
- **E. Business analysts compare the test execution result to the acceptance criteria of the requirement / user story**

Answer: D,E

Explanation:

In acceptance testing, close collaboration between testers and business analysts ensures that test results are properly interpreted and aligned with business expectations.

A). Testers verify the effectiveness of corrective actions and document their verdict in the defect report - Correct. When a defect is resolved, testers retest the system and record whether the issue is fixed. This is a common testing activity during acceptance test execution.

E). Business analysts compare the test execution result to the acceptance criteria of the requirement / user story

- Correct. This ensures the functionality fulfills business needs and determines whether the criteria have been met for acceptance.

Incorrect options:

B: Testers do record actual results, but not necessarily "in a defect" unless a defect is found.

C: Priority is usually assigned by business analysts or stakeholders, not testers alone.

D: Business analysts do consider the impact of changes, but evaluating development risks is more a joint task with architects or developers.

NEW QUESTION # 44

Which one of the following statements regarding the graphical representation of business processes is true?

- **A. For acceptance testing, graphical business process models should focus on the user workflows to be tested.**
- B. Business processes should be described graphically using the DMN standard and completed with decision tables.
- C. Using decision tables in BPMN allows defining test conditions corresponding to the business rules under test.
- D. Graphical representations of business processes must describe the complete workflow in detail, including alternative and error scenarios.

Answer: A

NEW QUESTION # 45

.....

If you buy the CTFL-AcT study materials of us, we ensure you to pass the exam. Since the CTFL-AcT study materials have the quality and the accuracy, and it will help you pass exam just one time. Buying CTFL-AcT exam dumps are pass guaranteed and money back guaranteed for the failure. Furthermore, we choose international confirmation third party for payment for the CTFL-AcT Exam Dumps, therefore we can ensure you the safety of your account and your money. The refund money will return to your payment account.
