Dann müssen sie die BAPv5 Prüfungsunterlagen von ZertSoft probieren.

BCS Practitioner Certificate in Business Analysis Practice v5.0 BAPv5 Prüfungsfragen mit Lösungen (Q67-Q72):

67. Frage

A business analyst and a project manager are producing a business case for an initiative, which aims to improve the cyber defences of a large financial services provider They met recently to review progress and made the following notes for the next draft

1. The benefits of cyber security will be hard to describe in quantitative terms, so we will need to describe these qualitatively.
- 2 We need to make it clear that we have fully explored the solution market, and we have considered a range of approaches to meeting the objectives of this project.
3. The threat posed to the organisation from cyber attack, and therefore the justification for this project, needs to be clearly articulated Which THREE sections of a business case will cover these points'?

- A. Description of the current situation
- B. Analysis of costs and benefits
- C. Options considered
- D. Recommendations
- E. Risk assessment

Antwort: A,B,C

Begründung:

A business case is a document that provides the rationale and justification for a proposed business change or solution. It helps to evaluate the benefits, costs, risks and impacts of different options and recommend the best one for further development and implementation. A business case typically consists of several sections, such as executive summary, description of the current situation, description of the desired situation, options considered, analysis of costs and benefits, risk assessment and recommendations. Therefore, options A, B and C are correct answers, as they cover the sections of a business case that will address the points noted by the business analyst and the project manager. Options considered is the section where different approaches or solutions to meet the objectives of the project are identified and described. It helps to show that a range of alternatives have been explored and evaluated. Analysis of costs and benefits is the section where the financial implications of each option are estimated and compared. It helps to show the expected value and return on investment of each option. Description of the current situation is the section where the problem or opportunity that motivates the project is clearly defined and articulated. It helps to show the justification and urgency for the project. Option D is not a correct answer, as recommendations is not a section of a business case that will address any of the points noted by the business analyst and the project manager. Recommendations is the section where the preferred option is selected and proposed based on the analysis and evaluation of other sections. Option E is not a correct answer, as risk assessment is not a section of a business case that will address any of the points noted by the business analyst and the project manager. Risk assessment is the section where the uncertainties and potential negative consequences of each option are identified and analysed. It helps to show how risks can be avoided, reduced or managed.

68. Frage

An airline has agreed that the following Key performance indicator (KPI) will help measure one of the airline's Critical Success Factors (CSFs) -customer service. The KPI is the percentage of customers rating our service as excellent in an independently administrator customer survey.

In the current year, the performance objective associated with KPI is 70%. The airline, therefore, aims for at least 70% of customers rating its service as excellent.

Which of the following activities in a Business Activity Model would establish whether the KPI and its associated performance objective is being achieved?

- **A. Monitor customer satisfaction.**
- B. Define customer satisfaction.
- C. Agree performance objective.
- D. Deliver customer service.

Antwort: A

Begründung:

The activity 'monitor customer satisfaction' would establish whether the KPI and its associated performance objective is being achieved, as it would involve collecting and analysing the data from the customer survey. The other activities are related to defining, agreeing or delivering customer satisfaction, but not measuring it. Therefore, option A is the correct answer.

69. Frage

End users in one business area are unwilling to adopt a new finance management system (recently introduced by the innovation team), as they perceive that it is unnecessarily complicated and not useful. One of the end users in this business area has been very vocal and has been relying support from others since posting about it on the company's intranet homepage.

The introduction finance system was initially supported by senior managers, but now users in other business area are also beginning to question whether they adopt the tool and are raising the issue with their managers.

The sponsor fully supports the decision to go ahead with the now tool and has made it very clear to senior managers that he expects them to support this Initiative.

Which stakeholder management strategy SHOULD be taken with the senior managers?

- A. Keep informed
- **B. Constant active management**
- C. Keep onside.
- D. Watch

Antwort: B

Begründung:

Explanation

The stakeholder management strategy for senior managers should be constant active management. Senior managers have high power and high interest in the project, as they are responsible for overseeing its implementation and ensuring its alignment with organizational goals. They also have influence over other stakeholders, such as end users and employees. Therefore, they need to be regularly engaged, consulted, informed, and involved in decision making throughout the project lifecycle. Option B is the correct answer.

70. Frage

Why would a Business Analyst use a consensus Business Activity Model (BAM) in gap analysis?

- A. To establish which stakeholder views will not be reflected in the desired situation
- **B. To assess how far the organisation's current activities support the desired situation**
- C. To identify how the organisation should structure itself to support the desired situation
- D. To determine which activities in the desired situation are not financially feasible

Antwort: B

Begründung:

Explanation

A consensus BAM is a conceptual model that depicts the agreed view of what the organisation does or should do. It shows the high-level activities and the logical dependencies between them. By comparing the consensus BAM with the current situation, a gap analysis can identify where the organisation is not performing as desired or where there are opportunities for improvement. Therefore, option A is the correct answer.

71. Frage

Adiyan has been considering the feasibility of introducing a new payments method into his company His draft report reads 'The new payment method has not yet been widely adopted although it has the backing of all the big phone brands. Our current payments system will be upgraded next month to take payment as part of a scheduled release This method of payment will be supported under our current license deal Trials have shown that the technology will scale to our customer base and cyber security testing is encouraging' Which of the following is the BEST description of the areas of Technical feasibility mentioned in the report?

- A. Reliable. Compatible, Secure. Architectural Alignment
- **B. Proven. Compatible, Secure. Scalable**
- C. Timely, Reliable, Proven, Architectural Alignment
- D. Timely, Compatible. Secure, Scalable

Antwort: B

Begründung:

Explanation

Technical feasibility is the extent to which a proposed business change or solution is possible and realistic from a technical perspective. It helps to assess whether a proposed business change or solution can be developed, implemented and maintained using the available or required technology. Therefore, option A is the correct answer, as it describes the areas of technical feasibility mentioned in the report. Proven is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution has been tested and verified by previous or existing users or applications. It helps to ensure reliability and quality of the technology. An example of proven in the report is the new payment method has not yet been widely adopted although it has the backing of all the big phone brands. Compatible is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can work or integrate with other existing or required technologies. It helps to ensure interoperability and functionality of the technology. An example of compatible in the report is our current payments system will be upgraded next month to take payment as part of a scheduled release. Secure is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can protect or prevent unauthorised access, use, modification or disclosure of data or information. It helps to ensure confidentiality, integrity and availability of the technology. An example of secure in the report is cyber security testing is encouraging.

Scalable is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can handle or adapt to changes in demand, volume or performance. It helps to ensure efficiency and flexibility of the technology. An example of scalable in the report is trials have shown that the technology will scale to our customer base. Option B is not a correct

answer, as it does not describe all the areas of technical feasibility mentioned in the report. Timely is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can be developed, implemented and maintained within the available or required time frame. It helps to ensure punctuality and speed of the technology. There is no example of timely in the report. Option C is not a correct answer, as it does not describe all the areas of technical feasibility mentioned in the report. Reliable is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can perform consistently and accurately without errors or failures. It helps to ensure dependability and accuracy of the technology. There is no example of reliable in the report. Architectural alignment is an area of technical feasibility that relates to whether the technology used for the proposed business change or solution can fit or align with other existing or required architectures, such as business, data or application architectures. It helps to ensure consistency and coherence of the technology. There is no example of architectural alignment in the report. Option D is not a correct answer, as it does not describe any of the areas of technical feasibility mentioned in the report.
