New HPE6-A88 Test Tutorial & HPE6-A88 Mock Test

They need the opportunity and energy to get past and through information about the HPE Aruba Networking ClearPass Exam (HPE6-A88) exam and consequently, they need unbelievable test center around the material. HP HPE6-A88 dumps will clear their

requests and let them in on how they can scrutinize up for the HPE Aruba Networking ClearPass Exam exam. This is the super choice that will save their endeavors and time also in tracking down help for the HP HPE6-A88 Exam

HPE Aruba Networking ClearPass Exam Sample Questions (Q63-Q68):

NEW QUESTION # 63

A network engineer needs to ensure secure and reliable communication between network devices and the RADIUS server over an unsecured network. Which configuration should they implement?

- A. Implement RADIUS with PSK because it is simpler to configure and only encrypts passwords.
- **B. Implement RadSec because it encrypts all RADIUS communication and uses TCP for reliable packet delivery.**
- C. Use UDP for faster message transport and rely on internal network security.

Answer: B

Explanation:

Traditional RADIUS (UDP 1812/1813) only encrypts the password attribute; the rest of the packet (including the username) is sent in cleartext. Furthermore, UDP is connectionless and can be unreliable over WAN links.

RadSec solves both issues by wrapping RADIUS in TLS , providing full-packet encryption, and using TCP , which provides guaranteed delivery and better handling of MTU issues/fragmentation across unsecured public networks.

NEW QUESTION # 64

What is the most critical step the administrator should take to integrate ClearPass with Microsoft Active Directory for user management?

- A. Ensure that ClearPass can enforce network policies based on user roles.
- B. Set up ClearPass to log all user activities for auditing purposes.
- **C. Configure ClearPass to interact with Microsoft Active Directory and validate user credentials.**

Answer: C

Explanation:

The foundational step for integration is establishing the Authentication Source . The administrator must configure the ClearPass server to join the AD domain or use LDAP/S to communicate with the Domain Controllers. This allows ClearPass to perform a "bind" operation to validate passwords and retrieve the attributes necessary for the subsequent authorization and enforcement phases.

NEW QUESTION # 65

An IT administrator is configuring ClearPass for a secure network. They have enabled the OSCP authentication method and are now deciding whether to enable the 'Override OSCP URL from Client' option. What will ClearPass do if the 'Enable' option is unchecked and the certificate includes an OSCP URL?

- A. ClearPass will prompt the user for a valid OSCP URL.
- **B. ClearPass will use the OSCP URL included in the certificate.**
- C. ClearPass will use the OSCP URL from the authentication method.

Answer: B

Explanation:

When the option to override the OSCP URL from the client is not enabled, ClearPass relies on the OSCP responder information embedded in the certificate itself. If the certificate includes an OSCP URL, ClearPass uses that URL to perform the certificate status validation.

NEW QUESTION # 66

An IT specialist is configuring authentication methods for a network resource in ClearPass. They need to ensure that only valid methods are used and that the client credentials are authenticated against multiple sources in a specific order. What should the specialist do?

- A. Use the Authorization tab to configure authentication methods
- **B. Select multiple authentication sources and order them from top-down**
- C. Add new RADIUS CoA Action for each authentication source

Answer: B

Explanation:

ClearPass allows multiple authentication sources to be selected and evaluated in a defined sequence. By ordering the sources from top to bottom, ClearPass attempts authentication against each source in order until valid credentials are successfully authenticated or all sources are exhausted.

NEW QUESTION # 67

An organization is setting up a ClearPass server for their network authentication. The administrator has installed a certificate issued by an internal Certificate Authority. The clients cannot fully validate the server's certificate during the validation process. What additional step must the administrator take to ensure the clients can successfully validate the certificate?

- **A. Install the root certificate from the internal Certificate Authority on all client devices.**
- B. Reissue the certificate from a public Certificate Authority.
- C. Disable the trust check in the client's validation process.

Answer: A

Explanation:

For clients to successfully validate a server certificate issued by an internal Certificate Authority, they must trust that CA. Installing the root certificate on all client devices establishes the trust chain, allowing clients to verify the ClearPass server certificate during authentication.

NEW QUESTION # 68

.....

No matter how good the product is users will encounter some difficult problems in the process of use. Our HPE6-A88 real exam materials are not exceptional also, in order to enjoy the best product experience, as long as the user is in use process found any problem, can timely feedback to us, for the first time you check our HPE6-A88 Exam Question performance, professional maintenance staff to help users solve problems. Our HPE6-A88 learning reference files have a high efficient product maintenance team, and they can send the HPE6-A88 exam questions to you in a few minutes.
