If you buy FCP_FAZ_AD-7.4 exam material, things will become completely different. FCP - FortiAnalyzer 7.4 Administrator study questions will provide you with very flexible learning time. Unlike other learning materials on the market, FCP_FAZ_AD-7.4 exam guide has an APP version. You can download our app on your mobile phone. And then, you can learn anytime, anywhere. Whatever where you are, whatever what time it is, just an electronic device, you can practice. With FCP - FortiAnalyzer 7.4 Administrator study questions, you no longer have to put down the important tasks at hand in order to get to class; with FCP_FAZ_AD-7.4 Exam Guide, you don't have to give up an appointment for study. Our study materials can help you to solve all the problems encountered in the learning process, so that you can easily pass the exam.

Fortinet FCP_FAZ_AD-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Administration: This section evaluates the ability of network and security analysts to configure administrative access and manage Administrative Domains (ADOMs). It covers tasks such as setting user permissions, managing backups, and disk quotas, and ensuring secure and efficient management of administrative privileges within FortiAnalyzer systems.
Topic 2	<ul style="list-style-type: none">Device Management: Here, Fortinet network and security analysts are evaluated on their ability to handle devices linked to FortiAnalyzer. This includes adding new devices, managing them efficiently, and troubleshooting communication issues.
Topic 3	<ul style="list-style-type: none">System Configuration: This section assesses the capabilities of network and security analysts in managing FortiAnalyzer systems. It includes tasks like performing initial configurations, setting up high-availability systems, and configuring RAID for storage.
Topic 4	<ul style="list-style-type: none">Logs and Reports Management: This part of the exam measures the candidate's ability to handle log data and generate reports using FortiAnalyzer. Network and security analysts must show proficiency in managing, analyzing, and reviewing logs to ensure effective system monitoring and auditing processes are in place.

Fortinet FCP_FAZ_AD-7.4 Latest Test Question | FCP_FAZ_AD-7.4 Valid

Test Papers

With rapid development of IT industry, more and more requirements have been taken on those who are working in IT industry. So if you don't want to be eliminated in the competition, to pass FCP_FAZ_AD-7.4 exam is a necessary for you. If you worry that you will not get the satisfied results after you have taken too much time and energy to prepare the FCP_FAZ_AD-7.4 Exam. Now let our ITexamReview help you! Countless FCP_FAZ_AD-7.4 exam software users of our ITexamReview let us have the confidence to tell you that using our test software, you will have the most reliable guarantee to pass FCP_FAZ_AD-7.4 exam.

Fortinet FCP - FortiAnalyzer 7.4 Administrator Sample Questions (Q43-Q48):

NEW QUESTION # 43

You are trying to initiate an authorization request from FortiGate to FortiAnalyzer, but the Security Fabric window does not open when you click Authorize.

Which two reasons can cause this to happen? (Choose two.)

- A. A pre-shared key needs to be established on both sides.
- **B. The fabric authorization settings on FortiAnalyzer are misconfigured.**
- C. The Security Fabric root is unauthorized and needs to be added as a trusted host.
- **D. The management computer does not have connectivity to the authorization IP address and port combination.**

Answer: B,D

Explanation:

The management computer does not have connectivity to the authorization IP address and port combination.

If there is no network connectivity between the management computer and the FortiAnalyzer on the specific IP address and port used for authorization, the Security Fabric window will not open.

The fabric authorization settings on FortiAnalyzer are misconfigured.

If the fabric authorization settings on FortiAnalyzer are not properly configured, FortiGate will not be able to initiate the authorization request, preventing the Security Fabric window from opening.

The other options are not applicable because:

Pre-shared keys are not required for initial authorization between FortiGate and FortiAnalyzer; they are typically used for establishing VPN tunnels.

The Security Fabric root does not need to be added as a trusted host to open the authorization window. Trusted hosts are more relevant to FortiGate's access control for management interfaces.

NEW QUESTION # 44

The admin administrator is failing to register a FortiClient EMS on the FortiAnalyzer device.

What can be the reason for this failure?

- A. ADOM mode should be set to advanced, in order to register the FortiClient EMS device.
- B. A separate license is required on FortiAnalyzer in order to register the FortiClient EMS device.
- **C. ADOMs are not enabled on FortiAnalyzer.**
- D. FortiAnalyzer is in an HA cluster.

Answer: C

Explanation:

Reference: https://help.fortinet.com/fa/faz50hlp/56/5-6-2/FMG-FAZ/0800_ADOMs/0015_FortiClient%20and%20ADOMs.htm

NEW QUESTION # 45

What statements are true regarding the "store and upload" log transfer option between FortiAnalyzer and FortiGate? (Choose three.)

- **A. Both secure communications methods (SSL and IPsec) allow the store and upload option.**
- B. Disk logging is enabled by default on the FortiGate.
- **C. Only FortiGate models with hard disks can send logs to FortiAnalyzer using the store and upload option.**
- D. All FortiGates can send logs to FortiAnalyzer using the store and upload option.

- E. Disk logging is enabled on the FortiGate through the CLI only.

Answer: A,C,E

NEW QUESTION # 46

Which two statements are true regarding the log synchronization states for HA on FortiAnalyzer?
(Choose two.)

- A. With Initial Logs Sync, when you add a unit to an HA cluster, the primary device synchronizes its logs with the backup device.
- B. By default, Log Data Sync is disabled on all backup devices.
- C. When Log Data Sync is turned on, the backup device reboots and then rebuilds the log database with the synchronized logs.
- D. Log Data Sync provides real-time log synchronization to all backup devices.

Answer: A,D

Explanation:

Log Data Sync provides real-time log synchronization to all backup devices. - Log Data Sync in FortiAnalyzer HA setups is designed to ensure that all backup devices in the cluster are kept up-to-date with real-time log data from the primary device. This synchronization helps maintain log integrity and availability even in the event of a primary device failure.

With Initial Logs Sync, when you add a unit to an HA cluster, the primary device synchronizes its logs with the backup device. -

When a new unit is added to an HA cluster, Initial Logs Sync is crucial to ensure that the new unit starts with a complete set of logs. This process involves the primary device synchronizing its existing logs to the newly added backup unit, which ensures consistency across the cluster.

NEW QUESTION # 47

Which statement is true about ADOMs?

- A. You can change the ADOM mode only through the GUI.
- B. In normal mode, you cannot change the disk quota of the ADOM after its creation.
- C. A fabric ADOM can include all the device types supported by FortiAnalyzer.
- D. When a FortiAnalyzer Fabric is implemented, the default ADOM mode is set to advanced.

Answer: C

Explanation:

Regarding ADOMs (Administrative Domains) in FortiAnalyzer, a fabric ADOM is capable of including all device types that FortiAnalyzer supports. This is part of the flexibility offered by ADOMs to manage and report on logs from various devices within a Fortinet security fabric. ADOMs can be enabled to support non-FortiGate devices as well, and the root ADOM in Fabric ADOMs provides visibility into all Security Fabric devices. Additionally, it should be noted that in normal mode, you cannot assign different FortiGate VDOMs to different ADOMs, while in advanced mode, you can, which provides a more granular control over the log data from individual VDOMs.
