

Valid Exam 4A0-205 Preparation & 4A0-205 Exam Objectives

Nokia 4A0-205 Questions - Maximize your Exam Preparation | ExamsKit

After passing the Nokia Optical Networking Fundamentals exam, IT applicants can increase their value in the professional sphere of . However, each applicant faces a problem in selecting the best Nokia 4A0-205 questions to properly prepare for the exam. By using out-of-date ONP & Nokia Optical Network Services Expert certification exam study materials, many applicants waste their time and money. To help you study for the exam, ExamsKit offers [Authentic Nokia 4A0-205 Exam Questions](#). For students who want to breeze through the ONP & Nokia Optical Network Services Expert certification exam quickly, we provide updated questions. Under the guidance of Nokia qualified specialists from around the world, ExamsKit developed the Nokia 4A0-205 practice questions.

The image shows the ExamsKit logo at the top left. Below it is a promotional banner featuring a man in a red and black plaid shirt giving a thumbs up. The banner text reads: "ACQUIRE YOUR DREAM CERTIFICATION IN ONE GO - GET PREMIUM EXAM QUESTIONS". Below the banner is a "TRY NOW" button and the website "WWW.EXAMSKIT.COM".

ExamsKit Provides 3 Formats of Nokia 4A0-205 Exam Questions

Through many people complain that it is hard for searching a job. But If you get an excellent certification (with 4A0-205 new test collection materials), you may be took as a skilled engineer. There is increasing demand for all kinds of senior R & D engineer in each link of internet, website, soft, App. Nokia 4A0-205 new test collection materials will be a stepping-stone to success; you will have a good job with good prospects for development.

Nokia 4A0-205 exam, also known as Nokia Optical Networking Fundamentals, is designed for professionals who want to gain knowledge about optical networking. Nokia Optical Networking Fundamentals certification is one of the most popular and in-demand certifications in the field of optical networking. The Nokia 4A0-205 Exam covers a wide range of topics related to optical networking, such as optical transmission systems, optical switching, and optical network design.

4A0-205 Exam Objectives & Latest 4A0-205 Test Simulator

UpdateDumps have made customizable Nokia 4A0-205 practice tests so that users can take unlimited tests and improve Nokia 4A0-205 exam preparation day by day. These 4A0-205 practice tests are based on the real examination scenario so the students can feel the pressure and learn to deal with it. The customers can access the result of their previous given 4A0-205 Exam history and try not to make any excessive mistakes in the future.

Nokia Optical Networking Fundamentals Sample Questions (Q53-Q58):

NEW QUESTION # 53

With reference to the image, where is the OPS card placed to provide the OMSP protection?

- A. Between the transponders and the mux/demux
- B. Between the mux/demux and the amplifier
- C. After the amplifiers
- D. Before the transponder, on the client side, towards the external device

Answer: D

NEW QUESTION # 54

What is the OAMP LAN interface?

- A. It is an RJ-45 interface (a common Ethernet port) used for cascading 1830 PSS nodes (e.g., external shelves)
- B. It is an RJ-45 interface (a common Ethernet port) used to export active alarms to an external device, typically equipped with several LEDs
- C. It is an RJ-45 interface (a common Ethernet port) that has to be configured with an IP address for node reachability and management
- D. It is an RJ-45 interface (common Ethernet port) used to connect one or more client ports (e.g., 1Gb/s or legacy 100Mbit/s client flows)

Answer: C

Explanation:

It is an RJ-45 interface (a common Ethernet port) that has to be configured with an IP address for node reachability and management. This interface is used to connect the OAMP node to the LAN, allowing it to be managed and monitored remotely.

NEW QUESTION # 55

Is it possible to select the fiber type independently for each segment while designing a network in EPT?

- A. Yes, during the link creation through the wizard
- B. No, a unique type is allowed per design for all segments
- C. Yes, during the segment creation phase or editing
- D. No, as the fiber type is selected for links only and it's one for whole design

Answer: C

Explanation:

Yes, during the segment creation phase or editing. It is possible to select the fiber type independently for each segment while designing a network in EPT. This can be done during the segment creation phase or when editing an existing segment. This allows for more flexibility when designing the network and allows for more efficient use of resources.

NEW QUESTION # 56

What is the block that converts the colorless (or black and white) client signal to a specific optical channel in a WDM system?

- A. Dispersion compensation module (DCM)

- B. Wavelength router (WR)
- C. Static filter device (SFD)
- **D. Optical transponder (OT)**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Nokia Optical Networking Fundamentals:

The Optical Transponder (OT) is the essential interface component in a WDM system that bridges the gap between the client-side equipment and the WDM line-side. Client signals, often referred to as "colorless" or "black and white" because they typically use standard 1310nm or 1550nm short-reach optics, cannot be directly multiplexed into a DWDM fiber because they would interfere with one another.

The Transponder performs an O-E-O (Optical-Electrical-Optical) conversion process: it receives the client's optical signal, converts it to an electrical format to perform 3R functions (Re-amplification, Re-shaping, and Re-timing) and often wraps it into an OTN (Optical Transport Network) frame, and then re-transmits it using a high-precision, ITU-T grid-compliant colored wavelength. In the Nokia 1830 PSS portfolio, these can be dedicated transponders for a single high-speed service or Muxponders, which aggregate multiple lower-speed client signals into a single high-speed "colored" line interface. Other components like the SFD are used for multiplexing those colors, and the DCM is used for managing fiber impairments, but only the Transponder performs the initial frequency conversion.

NEW QUESTION # 57

A user needs to retrieve the active alarm list from a network element. Which command should be issued through an 1830 PSS CLI?

- A. display alarms
- **B. alm**
- C. show active alarms
- D. retrieve alarms

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Nokia Optical Networking Fundamentals:

The Nokia 1830 PSS uses a Command Line Interface (CLI) that is distinct from the Nokia SR-OS used in routers. For technicians performing local maintenance or troubleshooting via a serial or SSH connection to the Shelf Controller (EC), the command to view the current status of the network element's alarms is show fault-database or the shorthand alm.

When the alm command is executed, the system displays a table containing all active alarms, their severity (Critical, Major, Minor, or Warning), the timestamp of the occurrence, and the specific object (e.g., a specific port or card) that is reporting the fault. This is the primary method for "Layer 0" local troubleshooting. While management software like WS-NOC provides a Graphical User Interface (GUI) to view these alarms, knowing the CLI command is essential for field operations where a connection to the central management system might not be available. Option B, C, and D are incorrect as they do not follow the specific syntax of the 1830 PSS CLI environment.

NEW QUESTION # 58

.....

Our to-the-point and trustworthy Nokia 4A0-205 Exam Questions in three formats for the Nokia 4A0-205 certification exam will surely assist you to qualify for Nokia Optical Networking Fundamentals certification. Do not underestimate the value of our Nokia 4A0-205 Exam Dumps because it is the make-or-break point of your career.
