Printable JN0-452 PDF & High-quality JN0-452 Test Cram Help you Clear

Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) Efficiently

The JN0-452 exam prepare materials of ExamsLabs is high quality and high pass rate, it is completed by our experts who have a good understanding of real JN0-452 exams and have many years of experience writing JN0-452 study materials. They know very well what candidates really need most when they prepare for the JN0-452 Exam. They also understand the real JN0-452 exam situation very well. We will let you know what a real exam is like. You can try the Soft version of our JN0-452 exam question, which can simulate the real exam.

Juniper Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) Sample Questions (Q93-Q98):

NEW QUESTION # 93
What are two 802.11 MAC frame types? (Choose two.)

- A. BSSID
- B. management
- C. SSID
- D. control

Answer: B,D

Explanation:
Reference: https://howiwifi.com/2020/07/13/802-11-frame-types-and-formats/#:~:text=There%20are%20three%20types%20of,the%20layer%203%2D7%20information
According to the Lecture 4 - MAC Layer - Part 1 document, two 802.11 MAC frame types are:
Control, which is used to coordinate access to the wireless medium and acknowledge successful transmissions.
Management, which is used to establish and maintain associations between devices and perform functions such as authentication, scanning, and roaming.

NEW QUESTION # 94
A hospital is using the Asset Visibility feature to track wheelchairs. They notice that the location of a specific wheelchair is not updating.
Which of the following is the most likely cause?

- A. The hospital's floorplan has not been scaled correctly.
- B. The Marvis subscription has expired.
- C. The wheelchair's BLE tag has a dead battery.
- D. The WLAN is configured for WPA3.

Answer: C

NEW QUESTION # 95
A retail customer has legacy 2.4 GHz scanners that need to connect to the WLAN, but they are not connecting.
Which WLAN data rate setting is required for these devices to connect?

- A. Custom Rates
- B. Compatible
- C. No Legacy
- D. High Density

Answer: B

NEW QUESTION # 96
You are asked to clone your Juniper Mist primary site configuration to use for a new site being added. In this scenario, which two

configuration objects will be copied? (Choose two.)

- A. the RF templates
- B. the site location
- C. the Auto Firmware Upgrade settings
- D. the WLANs

Answer: A,C

Explanation:
The Clone Site feature in the Juniper Mist dashboard is a powerful tool designed to streamline the deployment of new physical locations by duplicating the environmental and operational logic of an existing
"gold standard" site. However, to avoid configuration conflicts (such as duplicate addresses) and to maintain the integrity of the hierarchy, Mist is selective about which objects are carried over during the cloning process.
According to Juniper Mist documentation, only the settings visible on the Site Configuration page are copied to the new site. This specifically includes:
* Auto Firmware Upgrade settings (A): The specific versioning (Production vs. RC) and the weekly or daily maintenance windows defined for the site are preserved. This ensures that the new site follows the same lifecycle management policy as the primary site.
* RF Templates (B): The radio resource management (RRM) profile assigned to the site is copied. This includes channel planning, bandwidth settings (20/40/80 MHz), and power level constraints tailored for that environment.
* Other Site-Level Settings: This also includes Webhooks, Rogue/Honeypot AP detection rules, and Location Services settings.
Conversely, certain objects are explicitly not copied. The Site Location (C) and Site Name are excluded because each site must be geographically unique for accurate mapping and time zone calculation. WLANs (D) are also not copied through the Clone Site function; SSIDs are typically managed at the Organization level via WLAN Templates, which are then mapped to sites or site groups rather than being "hardcoded" into an individual site's local configuration. By cloning the site-specific parameters like RF templates and upgrade schedules, Mist allows administrators to rapidly scale their infrastructure while ensuring the core network access (WLANs) is maintained through the overarching organizational policy.

NEW QUESTION # 97
A user is connected to a WLAN that is secured with WPA3-Personal (SAE). Which of the following statements is true about the security of this user's traffic?

- A. Only traffic destined for the internet is encrypted; local network traffic is sent in the clear.
- B. The traffic is not encrypted, but the user is authenticated with a passphrase.
- C. The traffic is encrypted, but the AP's identity is not verified, leaving it vulnerable to honeypot attacks.
- D. All data frames are encrypted using a key derived from the shared passphrase, and management frames are protected.

Answer: D

NEW QUESTION # 98
