## dbt Labs dbt Analytics Engineering Certification Exam Sample Questions (Q22-Q27):

### NEW QUESTION # 22

Your team sometimes defines raw data sources directly in dbt models using .yaml files within the models directory. When might this approach be problematic?

- A. If multiple models utilize the same raw dataset.
- B. If the raw dataset's schema is subject to change.
- C. If the raw dataset is accessed via a non-standard data warehouse connector.
- D. If the raw dataset requires complex transformations.

**Answer: A**

Explanation:

Defining raw sources within models leads to duplication and potential maintenance issues when multiple models share that dependency. A separate sources.yaml file is generally preferred for shared datasets.

### NEW QUESTION # 23

You want to host your dbt project documentation on an internal company server that's behind a firewall. Which approach would be best suited for this scenario?

- A. Utilize the dbt docs serve command, making the local web server accessible within your private network.
- B. Directly modify the HTML and CSS of the generated documentation site to add firewall-specific rules.
- C. Deploy the docs using dbt Cloud's built-in hosting features.
- D. Upload the static files generated by dbt docs generate to your internal web server.

**Answer: D**

Explanation:

Uploading the static files (HTML, CSS, JavaScript) to your internal server provides a straightforward way to host the documentation behind a firewall.

### NEW QUESTION # 24

You encounter a dbt model using a series of nested subqueries to achieve complex filtering. Performance is poor. Which common alternative is likely to provide a performance boost?

- A. Rewrite the subqueries into equivalent JOIN statements where possible.
- B. Materialize the intermediate results of the subqueries as snapshots.
- C. Replace the nested logic with a custom dbt macro to improve modularity.
- D. Convert subqueries into nested CTEs for better readability.

**Answer: A**

Explanation:

Databases typically optimize joins more effectively than deeply nested subqueries. The other options don't directly address the core performance issue.

### NEW QUESTION # 25

A model fails with an error similar to: Numeric overflow converting to data type numeric(18,2)

- A. Incorrect ref() usage causing cyclical dependencies to occur.
- B. Data within a column exceeding the precision or scale of the defined data type
- C. A timeout issue caused by the model exceeding resource limits.
- D. Missing permissions to write data to the target table in the warehouse.

**Answer: B**

Explanation:

This error indicates data type limitations, causing computed values to fall outside the allowed range.

### NEW QUESTION # 26

A critical model depends on a third-party data source with periodic update delays. How could you structure your DAG to mitigate the impact of these delays on downstream reporting?

- A. Set up an alert to notify users when the upstream data source is not refreshed on time.
- B. Employ a snapshot of the third-party source to create a historical record.
- C. Configure a 'view' that gracefully handles missing data from the third-party source.
- D. Utilize the 'defer' option to allow upstream models to run while awaiting the source update.

**Answer: D**

Explanation:

The 'defer' option lets your DAG continue partially while awaiting the delayed data. Others offer solutions but don't address the core DAG flow issue.

### NEW QUESTION # 27
