Order-Management-Administrator Reliable Test Experience | High-quality Salesforce Order Management Administrator Accredited Professional 100% Free Latest Exam Cost

2026 Latest SureTorrent Order-Management-Administrator PDF Dumps and Order-Management-Administrator Exam Engine Free Share: https://drive.google.com/open?id=1nYC7X5kxw3eHj3IA16HCKUZOyOgtQidV

Our Salesforce training materials are famous at home and abroad, the main reason is because we have other companies that do not have core competitiveness, there are many complicated similar products on the market, if you want to stand out is the selling point of needs its own. Our Order-Management-Administrator test question with other product of different thing is we have the most core expert team to update our Order-Management-Administrator study materials, learning platform to changes with the change of the exam outline. If not timely updating Order-Management-Administrator Training Materials will let users reduce the learning efficiency of even lags behind that of other competitors, the consequence is that users and we don't want to see the phenomenon of the worst, so in order to prevent the occurrence of this kind of risk, the Order-Management-Administrator practice test dump give supervision and update the progress every day, it emphasized the key selling point of the product.

Salesforce Order-Management-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	• Process Automation and Integrations: This section helps the Salesforce Order Management Administrator Consultant demonstrate the capability to deliver business value by integrating Order Management with external systems using clicks rather than code. Mastery of navigation within Order Management processes, connecting nodes, and integrating systems efficiently ensures understanding of how to implement effective solutions.
Topic 2	• Data Model: This topic equips the Salesforce Order Management Administrator Consultant to showcase knowledge of critical objects such as Order, Order Summary, Fulfillment Orders, and Return Orders. It involves establishing and tracing integrations with B2C Commerce or other systems, including custom attributes. Proficiency here is pivotal for ensuring seamless data flow and robust Order Management operations within complex business environments.
Topic 3	• Advanced Topics: This topic challenges the Salesforce Order Management Administrator Consultant to diagnose and resolve configuration issues that hinder the launch or operation of Order Management processes. Proficiency includes troubleshooting integration problems and articulating how various processes interact to support successful deployments and system functionality.

Topic 4	• User Experience and Customization: This section emphasizes leveraging Salesforce's Lightning UI to enhance user experiences. The Salesforce Order Management Administrator Consultant will customize experiences for users and managers through tools like the Lightning Page Editor, Report Builder, and out-of-the-box components. Success in this area ensures optimized workflows and improved operational efficiency.

Do not reject challenging yourself. Your life will finally benefit from your positive changes. Let us struggle together and become better. Then you will do not need to admire others' life. Our Order-Management-Administrator real exam dumps will fully change your life.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q20-Q25):

NEW QUESTION # 20
What two tools can an administrator use to debug an issue with an Apex trigger?

- A. Debug Logs in Setup
- B. Apex Logs in Setup
- C. Log Inspector in the Developer Console
- D. Error Logs in the Developer Console

Answer: A,C

Explanation:
The administrator can use two tools to debug an issue with an Apex trigger: Log Inspector in the Developer Console and Debug Logs in Setup. The Log Inspector is a tool that displays a graphical representation of a debug log, which is a record of database operations, system processes, and errors that occur when executing a transaction or running unit tests. The Log Inspector helps you analyze and troubleshoot your code by highlighting errors, checkpoints, and execution times. The Debug Logs page in Setup lets you monitor and retain debug logs for users, Apex classes, Apex triggers, and Lightning components. You can view, download, or delete debug logs from this page.

NEW QUESTION # 21
A company's service learn should not see Process Exceptions on any Order Summaries. How can an administrator meet these requirements?

- A. Modify the service team profiles to remove access to the lightning component and all associated Apex classes
- B. Add a filter to the Process Exception component on the Order Summary lightning record page to hide the component for the service team's Profile
- C. Modify the Order Summary page layout to remove visibility to the Process Exception component for Service team profiles
- D. Create a copy of the Order Summary lightning record page for the service team and remove the Process Exceptions component. Activate the lightning record page by profile for all Service team profiles.

Answer: D

Explanation:
The best way for the administrator to meet these requirements is to create a copy of the Order Summary lightning record page for the service team and remove the Process Exceptions component. Activate the lightning record page by profile for all Service team

profiles. A Process Exception is a record that represents an error or exception that occurred during the order lifecycle, such as payment authorization failure, inventory allocation failure, fulfillment location assignment failure, etc. A Process Exception has a lookup relationship to the Order object, and it contains information such as the exception type, status, message, etc. The Process Exceptions component is a standard component that displays process exceptions related to an order on its record page. The administrator can use the Lightning App Builder to create a copy of the Order Summary lightning record page for the service team and remove the Process Exceptions component from the page layout. The administrator can then activate the lightning record page by profile for all Service team profiles, so that they do not see Process Exceptions on any Order Summaries. NEW QUESTION # 22

An administrator needs to send an Outbound Message to an external accounting system whenever a Fulfillment Order is created. What is the best practice to create this functionality?

- A. Create a Process Builder
- B. Create an Apex Trigger
- C. Create a Flow
- D. Create a Workflow Rule

Answer: C

NEW QUESTION # 23

An administrator is encountering errors when reusing a composite API call to load test orders via the Workbench. What are three possible causes of this issue?

- A. The Administrator has logged into the wrong environment in Workbench
- B. The administrator is creating multiple objects in a single JSON query
- C. The administrator has duplicate Product SKUs in the JSON query
- D. The number of subrequests in the JSON query exceeds the 20 subrequest limit
- E. Record IDs used within the request are incorrect

Answer: C,D,E

Explanation:
Three possible causes of this issue are:
The administrator has duplicate Product SKUs in the JSON query. A Product SKU is a unique identifier for a product that is used to track inventory and sales. A Product SKU must be unique within an org, and it cannot be duplicated in a composite API call. If the administrator has duplicate Product SKUs in the JSON query, it will cause an error when loading test orders via the Workbench.
The number of subrequests in the JSON query exceeds the 20 subrequest limit. A subrequest is a single HTTP request that is part of a composite API call. A composite API call can contain up to 20 subrequests in a single JSON body. If the administrator has more than 20 subrequests in the JSON query, it will cause an error when loading test orders via the Workbench.
Record IDs used within the request are incorrect. A record ID is a unique identifier for a record that is used to reference and manipulate data in Salesforce. A record ID must be valid and exist in the org, and it must match the data type and format of the corresponding field. If the administrator has incorrect record IDs in the JSON query, such as using 15-character IDs instead of 18-character IDs, or using IDs from a different org, it will cause an error when loading test orders via the Workbench.
Verified Reference: https://developer.salesforce.com/docs/atlas.en-us.api_rest.meta/api_rest/resources_composite_composite.htm https://developer.salesforce.com/docs/atlas.en-us.api_rest.meta/api_rest/dome_composite_sobject_tree_flat.htm

NEW QUESTION # 24

What are two reasons for using Flows instead of Apex code?

- A. Flows can be modified and created without a developer
- B. Flows can be triggered by undelete events
- C. Flows have better performance options for large batches of records
- D. Flows provide a visual debug process

Answer: A,D

Explanation:
Two reasons for using Flows instead of Apex code are:
Flows can be modified and created without a developer. Flows are declarative tools that allow administrators to build complex business logic using clicks instead of code. Flows do not require any programming skills or knowledge, and they can be easily modified and maintained by administrators.
Flows provide a visual debug process. Flows have a built-in debugger that allows administrators to test and troubleshoot their flows in a graphical interface. The debugger shows the flow execution path, the values of variables and sObject fields, and any errors or warnings that occur in the flow.
