Snowflake SnowPro® Core Certification (COF-C03) Sample Questions (Q590-Q595):

NEW QUESTION # 590

What metadata does Snowflake store concerning all rows stored in a micro-partition? (Select TWO).

- A. The range of values for each of the columns in the micro-partition
- B. A count of the number of total values in the micro-partition

- C. The number of distinct values for each column in the micro-partition
- D. The range of values for each partition in the micro-partition
- E. The range of values for each of the rows in the micro-partition

Answer: A,B

NEW QUESTION # 591

The following JSON is stored in a VARIANT column called src of the CAR_SALES table:

```
{
  "customer": [
    {
      "address": "San Francisco, CA",
      "name": "Jane Doe"
    }
  ],
  "date": "2022-01-28",
  "dealership": "Town Auto Sales",
  "salesperson": {
    "id": "55"
  }
}
```

A user needs to extract the dealership information from the JSON. How can this be accomplished?

- A. select src:dealership from car_sales;
- B. select src:Dealership from car_sales;
- C. select dealership from car_sales;
- D. select src.dealership from car_sales;

Answer: D

Explanation:

In Snowflake, to extract a specific element from a JSON stored in a VARIANT column, the correct syntax is to use the dot notation. Therefore, the query select src.dealership from car_sales; will return the dealership information contained within each JSON object in the src column.

NEW QUESTION # 592

In an auto-scaling multi-cluster virtual warehouse with the setting SCALING_POLICY = ECONOMY enabled, when is another cluster started?

- A. When the system has enough load for 6 minutes
- B. When the system has enough load for 10 minutes
- C. When the system has enough load for 2 minutes
- D. When the system has enough load for 8 minutes

Answer: C

Explanation:

In an auto-scaling multi-cluster virtual warehouse with the SCALING_POLICY set to ECONOMY, another cluster is started when the system has enough load for 2 minutes (A). This policy is designed to optimize the balance between performance and cost, starting additional clusters only when the sustained load justifies it.

NEW QUESTION # 593

What is the purpose of the STRIP NULL_VALUES file format option when loading semi-structured data files into Snowflake?

- A. It converts null values to empty strings during loading.

- B. It removes null values from all columns in the data.
- C. It skips rows with null values during the loading process.
- D. It removes object or array elements containing null values.

Answer: D

Explanation:

The STRIP NULL_VALUES file format option, when set to TRUE, removes object or array elements that contain null values during the loading process of semi-structured data files into Snowflake. This ensures that the data loaded into Snowflake tables does not contain these null elements, which can be useful when the "null" values in files indicate missing values and have no other special meaning.

NEW QUESTION # 594

Which of the following describes a Snowflake stored procedure?

- A. They can be created as secure and hide the underlying metadata from the user.
- B. They can contain only a single SQL statement.
- C. They can only access tables from a single database.
- D. They can be created to run with a caller's rights or an owner's rights.

Answer: D

Explanation:

Snowflake stored procedures can be created to execute with the privileges of the role that owns the procedure (owner's rights) or with the privileges of the role that calls the procedure (caller's rights). This allows for flexibility in managing security and access control within Snowflake.
