Just like the old saying goes, there is no royal road to success, and only those who do not dread the fatiguing climb of gaining its numinous summits. In a similar way, there is no smoothly paved road to the Sharing-and-Visibility-Architect certification. You have to work on it and get started from now. If you want to gain the related certification, it is very necessary that you are bound to spend some time on carefully preparing for the Sharing-and-Visibility-Architect Exam, including choosing the convenient and practical study materials, sticking to study and keep an optimistic attitude and so on.

Salesforce is a widely used customer relationship management software that helps organizations manage their customer interactions and data. As more and more companies adopt Salesforce, the need for skilled professionals to implement and manage the platform has grown significantly. One of the critical areas in Salesforce administration is sharing and visibility. Salesforce Sharing and Visibility

Architect certification is designed to validate a professional's expertise in designing and implementing complex sharing and visibility solutions in Salesforce.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q34-Q39):

NEW QUESTION # 34

Universal Containers has requirement to integrate Salesforce with an external system to control record access. What option should the Architect consider when designing a solution?

- A. Use the Security API to modify the role hierarchy in Salesforce.
- B. Use the SOAP API to create new Criteria-Based Sharing Rules in Salesforce.
- C. Use the Metadata API to maintain the related SObject records.
- **D. Use the SOAP API to maintain the related SObject_share records.**

Answer: D

NEW QUESTION # 35

Universal Containers (UC) requested that branch managers and UC branch staff should only see customers and related information in their geographic location.

Which options should be used together to achieve the requirements?

- A. Configure Role Hierarchy and create sharing rules.
- B. Create the Account Team and add branch manager team members, and configure organization-wide defaults of the Account object.
- **C. Configure organization-wide defaults of the Account object and create sharing rules.**

Answer: C

NEW QUESTION # 36

A consulting company uses the Salesforce mobile app for its field consultants and uses Case object to track customer specific consulting done by field consultants. The company also has a large number of customer service representatives who takes calls from customers on company issued desktops and uses case object to track customer issues and grievances. The company would like to capture images of customer site captured by field consultants while they are editing the case record during customer site visit. The Director of IT wants to minimize customization and promote reuseability of code artifacts wherever possible.

What recommendations should an architect give to the company to implement the image capture requirement, while ensuring customer that the service rep can continue to use same lightning pages they were trained to use?

- A. Create a separate button "Edit in Mobile", which opens a custom lightning component that will allow field consultants to add an image. No change required for desktop users.
- B. Use Lightning Component as an override for "Edit" action on lightning experience allowing image capture feature. Detect the form factor of the device and redirect the user to the default not overridden view.
- **C. Use Lightning Component as an override for "Edit" action on mobile view allowing image capture feature. No Change required for desktop users.**

Answer: C

Explanation:

* Mobile-Specific Customization: Salesforce allows overriding standard actions like "Edit" with custom Lightning components that are conditionally applied for mobile or desktop experiences.

* Why Option A is Correct:

* Overriding the "Edit" action for the mobile view only allows field consultants to use the image capture functionality without affecting desktop users' experience.

* This aligns with the requirement to minimize customization while leveraging reusable Lightning Components.

* Why Others Are Incorrect:

* Option B: Overriding for all devices and detecting form factors adds unnecessary complexity and could confuse desktop users.

* Option C: Adding a separate "Edit in Mobile" button complicates the user interface and training process.

For detailed implementation guidelines, see Salesforce Lightning Component Customization: <https://help>.

NEW QUESTION # 37

Universal Containers has set Opportunity Sharing to Private with Opportunity Teams enabled. Which three options can change the Owner of the Opportunity?

Choose 3 answers.

- A. Any Opportunity Team Member on the current Opportunity.
- B. The user specified as the Manager on the Owner's User Profile.
- C. Someone above the Opportunity Owner in the Role Hierarchy.
- D. The System Administrator or a user with the "Transfer Records" permission.
- E. The current Opportunity Owner can transfer the current ownership.

Answer: C,D,E

NEW QUESTION # 38

Universal Containers (UC) has implemented Customer Community with customer community plus license for its distributors. Retail distributors have part-time agents who work for multiple distributors. Those agents should have access to other distributor accounts as well.

What can be configured to grant agents access to different distributor accounts?

- A. Create sharing rules to share distributor accounts with agents.
- B. Use Apex sharing to share distributor accounts with agents using the Account__Share table.
- C. Use share group to share distributor accounts with agents who have account contact relationship.
- D. Create sharing set to share distributor accounts with agents using account contact relationship.

Answer: B

Explanation:

Explanation

Apex sharing is a way to programmatically grant access to records for users or groups of users. Apex sharing can be used to share records with Customer Community Plus users, who are not supported by other declarative sharing options such as sharing sets or sharing rules. Apex sharing uses the Account__Share table to store the sharing information for the Account object. Therefore, the answer A is correct and the other options are incorrect
