## Mule-Dev-301 Valid Exam Cram, Mule-Dev-301 Latest Test Questions

What is the measure of competence? Of course, most companies will judge your level according to the number of qualifications you have obtained. It may not be comprehensive, but passing the qualifying exam is a pretty straightforward way to hire an employer. Our Mule-Dev-301 Study Materials on the market this recruitment phenomenon, tailored for the user the fast pass the examination method of study, make the need to get a good job have enough leverage to compete with other candidates.

## Salesforce Certified MuleSoft Developer II Sample Questions (Q53-Q58):

### NEW QUESTION # 53

Which properties are mandatory on the HTTP Connector configuration in order to use the OAuth 2.0 Authorization Code grant type for authentication?

- A. External callback URL, access token URL, client ID, response refresh token

- B. External callback URL, access token URL, local authorization URL, authorization URL, client ID, client secret
- C. External callback URL, access token URL, client ID response access token
- D. Token URL, authorization URL, client ID, client secret local callback URL

**Answer: B**

Explanation:

To use the OAuth 2.0 Authorization Code grant type for authentication, the HTTP Connector configuration requires the following properties: token URL, authorization URL, client ID, client secret, and local callback URL. The token URL is the endpoint of the authorization server that provides access tokens. The authorization URL is the endpoint of the authorization server that initiates the user consent flow. The client ID and client secret are the credentials of the Mule application registered with the authorization server. The local callback URL is the endpoint of the Mule application that receives the authorization code from the authorization server.

Reference: <https://docs.mulesoft.com/http-connector/1.6/http-authentication#oauth-2-0>

#### NEW QUESTION # 54

A Mule application for processing orders must log the order ID for every log message output. What is a best practice to enrich every log message with the order ID?

- A. Use the Tracing module to set logging variables with a Mapped Diagnostic Context
- B. Set a flow variable and edit the log4/2.xml file to output the variable as part of the message pattern
- C. Create a custom XML SDK component to wrap the logger processor and automatically add the order ID within the connector
- D. Use flow variables within every logger processor to log the order ID

**Answer: A**

Explanation:

To enrich every log message with the order ID, the developer should use the Tracing module to set logging variables with a Mapped Diagnostic Context (MDC). The Tracing module allows adding custom key-value pairs to log messages using MDC variables. The developer can use Set Logging Variables operation to set the order ID as an MDC variable and then use it in any logger processor within the same thread or event. Reference: <https://docs.mulesoft.com/tracing-module/1.0/tracing-module-reference#set-logging-variables>

#### NEW QUESTION # 55

Which configurations are required for HTTP Listener to enable mTLS authentication?

- A. Set an appropriate keystore and truststore configuration for the listener
- B. Set an appropriate keystore configuration and use persistent connections for the listener
- C. Set an appropriate reconnection strategy and use persistent connections for the listener
- D. Set an appropriate truststore configuration and reconnection strategy for the listener

**Answer: A**

Explanation:

To enable mTLS authentication for HTTP Listener, the developer needs to set an appropriate keystore and truststore configuration for the listener. The keystore contains the certificate and private key of the Mule application that are used to prove its identity to clients. The truststore contains the certificates of trusted clients that are allowed to access the Mule application. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/tls-configuration#mutual-authentication>

#### NEW QUESTION # 56

A Mule application includes a subflow containing a Scatter.Gather scope. Within each log of the Scatter.Gather, an HTTP connector calls a PUT endpoint to modify records in different upstream system. The subflow is called inside an Unit successful scope to retry if a transitory exception is raised.

A technical spike is being performed to increase reliability of the Mule application.

Which steps should be performed within the Mule flow above the ensure idempotent behavior?

- A. None, the flow already exhibits idempotent behavior
- B. Remove the Put requests from the Scatter-Getter and perform them sequentially

- C. Ensure an error-handling flow performs corrective actions to roll back all changes if any leg of the Scatter-Gather fails
- D. Change the PUT requests inside the Scatter-Gather to POST requests

**Answer: C**

Explanation:

To ensure idempotent behavior within a Mule flow that contains a subflow with a Scatter-Gather scope, the developer should ensure an error-handling flow performs corrective actions to roll back all changes if any leg of the Scatter-Gather fails. Idempotency means that multiple identical requests have the same effect as a single request. Therefore, if one of the HTTP requests inside the Scatter-Gather fails, the error-handling flow should undo any changes made by other successful requests to ensure consistency and avoid partial updates. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept> <https://docs.mulesoft.com/mule-runtime/4.3/error-handling>

#### NEW QUESTION # 57

A mule application exposes an API for creating payments. An Operations team wants to ensure that the Payment API is up and running at all times in production.

Which approach should be used to test that the payment API is working in production?

- A. Create a health check endpoint that listens on a separate port and uses a separate HTTP Listener configuration from the API
- B. Monitor the Payment API directly sending real customer payment data
- C. Configure the application to send health data to an external system
- D. Create a health check endpoint that reuses the same port number and HTTP Listener configuration as the API itself

**Answer: A**

#### NEW QUESTION # 58
